# AQR LSE Fusion Fund

## Share Classes

| | |
|---|---|
| **I** | **QLFIX** |
| **N** | **QLFNX** |
| **R6** | **QLFRX** |

## Investment Objective

Seeks capital appreciation.

## Assets

$31.5 M

## Management Team

Cliff Asness, Ph.D
Michele L. Aghassi, Ph.D
John J. Huss
Laura Serban, Ph.D
Nathan Sosner, Ph.D

## Key Benefits

**Multiple Sources of Returns**
Investors can access an efficient allocation to both equity markets and long/short alternative returns in a single vehicle.

**A Core Equity Allocation**
The Fund seeks to outperform equities in all market environments.

**Tax-Aware Implementation**
The Fund attempts to maximize investors' returns through a tax-aware investment process.

## Fund Overview

The Fund applies a systematic process to go long stocks the Adviser expects to outperform and short stocks the Adviser expects to underperform, fused with exposure to the S&P 500 Total Return Index. Views are derived from hundreds of investment signals across stocks and sectors.

## Performance as of 09/30/2026 (%)

| | | | ANNUALIZED TOTAL RETURNS | | | | | EXPENSE RATIO | | |

***Disclosures***

***Principal Risks:***

*An investment in the Fund is subject to risks, including the possibility that the value of the Fund's portfolio holdings may fluctuate in response to events specific to the companies in which the Fund invests, as well as economic, political or social events in the U.S. or abroad. Foreign investments often involve special risks not present in U.S. investments that can increase the chances that the Fund will lose money. Currency risk is the risk that changes in currency exchange rates will negatively affect securities denominated in, and/or receiving revenues in, foreign currencies. Common stocks are subject to greater fluctuations in market value than certain other asset classes as a result of such factors as a company's business performance, investor perceptions, stock market trends and general economic conditions. Funds that emphasize investments in small and mid-cap companies generally will experience greater price volatility. The use of derivatives, including swaps and forward and futures contracts, exposes the Fund to additional risks including increased volatility, lack of liquidity, and increased transaction costs. This Fund enters into a short sale by selling a security it has borrowed. If the market price of a security increases after the Fund borrows the security, the Fund will suffer a potentially unlimited loss when it replaces the borrowed security at the higher price. Short sales also involve transaction and other costs that will reduce potential Fund gains and increase potential Fund losses. The Fund from time to time employs various hedging techniques. The success of the Fund's hedging strategy will be subject to the investment adviser's ability to correctly assess the degree of correlation between the performance of the instruments used in the hedging strategy and the performance of the investments in the portfolio being hedged. The Fund is subject to high portfolio turnover risk as a result of frequent trading, and thus, will incur a higher level of brokerage fees and commissions, and cause a higher level of tax liability to shareholders in the Fund.*

*The Fund is not suitable for all investors. An investor considering the Fund should be able to tolerate potentially wide price fluctuations. There are risks involved with investing including the possible loss of principal. Past performance does not guarantee future results. Diversification does not eliminate the risk of experiencing investment losses. This document is intended exclusively for the use of the person to whom it has been delivered by AQR and it is not to be reproduced or redistributed to any other person without AQR's written consent.*

***Definitions:***

*The S&P 500 Total Return Index is a market-capitalization-weighted index of 500 leading publicly traded companies in the United States.*

*Beta is a measure of how sensitive a Fund's return is to changes in a benchmark index. A beta of greater than 1 indicates a higher sensitivity to benchmark moves, and a beta less than 1 indicates lower sensitivity.*

*Volatility is a statistical measure of the variation in returns for a given security or index.*

*Information Ratio is a measure of performance of a security or investment against its benchmark.*

***Please refer to the Prospectus or Summary Prospectus for additional information regarding risks associated with the Fund. An investor should consider the investment objectives, risks, charges and expenses of the Fund carefully before investing. To obtain a Prospectus or Summary Prospectus containing this and other information, please call 1-866-290-2688 or visit https://funds.aqr.com. Read the Prospectus carefully before you invest. There is no assurance the stated objectives will be met.***
