The performance data quoted represents past performance. Past performance does not guarantee future results. Investment returns and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. Call 1-866-290-2688 or visit www.aqrfunds.com for current month-end performance. The Merrill Lynch 3-Month Treasury Bill Index consists of U.S. Treasury Bills maturing in 90 days. Indexes are unmanaged and one cannot invest directly in an index. Performance shown prior to a share class's inception date reflects the historical performance of the Fund's Class I shares, calculated using the fees and expenses of the Class N or Class R6 shares, respectively.

* While the Fund's actual portfolio construction uses AQR's proprietary risk models which take correlations into consideration, for the sake of simplicity, the "Risk Allocation" for each asset class is calculated by taking the standard deviation (a measure of the extent to which numbers are spread around their average) of returns to that set of positions (as if it were a static holding in the Fund), and dividing that number by the sum of that calculation for all asset classes such that the sum of all risk allocations equals 100%.

** Portfolio holdings are subject to change and should not be considered a recommendation to buy or sell securities.

About the Fund

Investment Objective:

Seeks positive absolute returns.

Reasons to Invest:

Portfolio Diversification

The Fund seeks to provide long-term returns with a low correlation to traditional asset class returns by investing in a broad spectrum of asset classes and markets.

Multi-asset, Multi-style Approach

The Fund employs a market-neutral, long/short strategy across five asset groups and four distinct investment styles.

Key Advantages:

Breadth of Styles

The Fund is diversified across four investment styles: value, momentum, carry and defensive. Each style is backed by economic theory and decades of academic research.

Disciplined Strategic Allocation

The Fund is risk-balanced across both investment styles and asset classes seeking to limit exposure to poor performance within any single style or asset class.

Experienced Management Team

AQR senior management has been working together and implementing complex alternatives since the mid-1990s.

Trading Infrastructure

Customized liquidity-providing algorithms help minimize transaction costs.

Cutting Edge Research

Ongoing commitment to research and development.

Investment Approach

Investment Universe of Fund

The investment universe of the Fund is chosen to maximize diversification benefits while focusing exclusively on liquid assets. The Fund applies market-neutral, long/short style strategies across five different asset groups:

Stocks & Industries – Approximately fifteen hundred stocks across major markets

Equity Indices – Twenty-one equity indices from developed and emerging markets

Fixed Income – Bond futures across six markets; short-term interest rate futures in four markets

Currencies – Twenty-two currencies in developed and emerging markets

Commodities – Eight commodity futures

Investment Styles Included in the Fund

A style is a disciplined, systematic method of investing that aims to produce long-term positive returns across markets and asset groups, backed by robust data and economic theory. The Fund employs the following four classic styles:

Value – The tendency for relatively cheap assets to outperform relatively expensive ones

Momentum – The tendency for an asset's recent relative performance to continue in the future

Carry – The tendency for higher-yielding assets to provide higher returns than lower-yield assets

Defensive – The tendency for lower risk and higher-quality assets to generate higher risk-adjusted returns

Advanced Portfolio Construction

AQR employs several sophisticated techniques to implement a portfolio that both efficiently harvests returns and effectively manages risk.

Diversification – Actively maintained across both styles and across asset classes

Risk targeting – Targets a consistent level of volatility in changing market conditions

Style agreement – Allows for the risk levels of asset classes to vary depending on the degree of agreement across styles

Non-directionality – Allows for hedging should any strategy take on conditional correlations to equity markets

Efficient execution – Utilizes proprietary, time-tested algorithms to minimize trading costs

PRINCIPAL RISKS:

The use of derivatives, forward and futures contracts, and commodities exposes the Fund to additional risks including increased volatility, lack of liquidity, and possible losses greater than the Fund's initial investment as well as increased transaction costs. Concentration generally will lead to greater price volatility. This fund enters into a short sale by selling a security it has borrowed. If the market price of a security increases after the Fund borrows the security, the Fund will suffer a potentially unlimited loss when it replaces the borrowed security at the higher price. Short sales also involve transaction and other costs that will reduce potential Fund gains and increase potential Fund losses. Diversification does not eliminate risk.

An investor considering the Funds should be able to tolerate potentially wide price fluctuations. The funds are subject to high portfolio turnover risk as a result of frequent trading, and thus, will incur a higher level of brokerage fees and commissions, and cause a higher level of tax liability to shareholders in the funds. The Funds may attempt to increase its income or total return through the use of securities lending, and they may be subject to the possibility of additional loss as a result of this investment technique.

This Fund is a non-diversified fund. Because the fund may invest in securities of smaller numbers of issuers, the Fund may be more exposed to the risks associated with and developments affecting an individual issuer than a fund that invests more widely, which may, therefore, have a greater impact on the Fund's Performance.

This Fund is not suitable for all investors. An investor considering the Fund should be able to tolerate potentially wide price fluctuations.
