

AQR Emerging Relaxed Constraint Equity Fund

Loosening the Long-Only Leash

Unlike long-only portfolios, relaxed-constraint strategies allow for a limited amount of shorting, which can provide greater return potential by amplifying the expression of both negative and positive views.

Opportunity to Outperform

The Fund invests 130% of the portfolio's assets long and 30% short, maintaining 100% net exposure to the market. The ability to have larger over- and underweights relative to the benchmark may provide greater return potential than a traditional long-only fund.

Disciplined Investment Process

The Fund uses a systematic, rules-based approach to select stocks for the portfolio. The result is a Fund constructed without emotion, based on historically proven drivers of returns such as value, momentum, quality and other proprietary factors.

Broadly Diversified Portfolio

The Fund invests in the full spectrum of stocks across the U.S. small-cap universe. It seeks to benefit from holding numerous small and moderate-sized active positions, rather than fewer, more concentrated bets.

By Relaxing the Long-Only Constraint, the Fund Allows Greater Exposure to Manager Views

PRINCIPAL RISKS:

Foreign investing involves special risks such as currency fluctuations and political uncertainty. Funds that emphasize investments in mid-cap companies generally will experience greater price volatility. The Adviser from time to time employs various hedging techniques. It is not possible to hedge fully or perfectly against any risk, and hedging entails its own costs.

Emerging markets are riskier than more developed markets because they tend to develop unevenly and may never fully develop. Investments in emerging markets may be considered speculative.

This Fund is not suitable for all investors. An investor considering the Funds should be able to tolerate potentially wide price fluctuations. The Funds may attempt to increase its income or total return through the use of securities lending, and they may be subject to the possibility of additional loss as a result of this investment technique.

An investment in the Fund is subject to risks, including the possibility that the value of the Fund's portfolio holdings may fluctuate in response to events specific to the companies in which the Fund invests, as well as economic, political or social events in the United States or abroad.

Diversification does not eliminate the risk of experiencing investment losses. Derivatives may be more sensitive to changes in economic or market conditions than other types of investments; this could result in losses that significantly exceed the fund's original investment.

As part of the Fund's principal investment strategy, the Fund will enter into short sales and will make investments in futures contracts and other derivative instruments. These investment activities provide the economic effect of financial leverage by creating additional investment exposure to the underlying instrument, as well as the potential for greater loss. If the Fund uses leverage through activities such as entering into short sales or purchasing derivative instruments, the Fund has the risk that losses may exceed the net assets of the Fund. The net asset value of the Fund while employing leverage will be more volatile and sensitive to market movements.

The MSCI Emerging Markets Index is designed to measure equity market performance in global emerging markets. The Emerging Markets Index is a float-adjusted market capitalization index that consists of indices in 26 emerging economies. One cannot invest directly in an index.
