

AQR FUNDS

**Supplement dated November 19, 2018 (“Supplement”)
to the Class I Shares and Class N Shares Summary Prospectus and Prospectus,
the Class R6 Shares Summary Prospectus and Prospectus,
and the Statement of Additional Information,
each dated January 29, 2018, as amended,
of the AQR Emerging Momentum Style Fund (the “Fund”)**

This Supplement updates certain information contained in the Summary Prospectus, Prospectus and Statement of Additional Information. Please review this important information carefully. You may obtain copies of the Fund’s Summary Prospectus, Prospectus and Statement of Additional Information free of charge, upon request, by calling (866) 290-2688, or by writing to AQR Funds, P.O. Box 2248, Denver, CO 80201-2248.

At a meeting held on November 15-16, 2018, the Board of Trustees (the “Board”) of AQR Funds (the “Trust”) approved a proposal to liquidate the Fund. Among other things, the Fund lacks sufficient assets to make its continued operation viable on an ongoing basis. Accordingly, effective 4:00 P.M. (Eastern time) on November 30, 2018, the Fund will no longer accept orders from new investors or existing shareholders to purchase Fund shares.

AQR Capital Management, LLC, the Fund’s investment adviser, intends to begin liquidating the Fund’s assets in an orderly manner in advance of the Liquidation Date (as defined below). Proceeds from the liquidation of the Fund’s assets will be held in cash and similar instruments pending distribution to shareholders. As a result, the Fund may deviate from its investment strategies and policies and cease to pursue its investment objective. The Fund may incur transaction costs from liquidating portfolio holdings and performance may be adversely affected from holding cash and similar instruments.

The Fund will declare a dividend to all holders of record on December 18, 2018 (the “Record Date”) consisting of any undistributed income and capital gains (net of available capital loss carryovers). On or about December 21, 2018 (the “Liquidation Date”), the Fund will make a liquidating distribution of its remaining assets proportionately to any shareholders holding shares on the Liquidation Date. The Fund will then be terminated as a series of the Trust. Shareholders may redeem their Fund shares or exchange their shares into shares of another series of AQR Funds, subject to any restrictions in the Fund’s Prospectus, at any time prior to the Liquidation Date.

The liquidation of the Fund is expected to have tax consequences for a taxable shareholder. Any final capital gain dividend will be treated as long-term capital gain, and any final income dividend will be taxable as ordinary income, or as qualified dividend income to the extent of the Fund’s income that so qualifies (which is taxed at the same preferential tax rates as long-term capital gains). The Fund’s final liquidating distribution will result in capital gain or loss to the receiving shareholder. Shareholders should consult their tax advisors concerning their tax situation and the impact of the liquidation and/or exchanging to a different fund has on their tax situation.

We appreciate your investment in the AQR Funds. For more information, please contact the Trust at (866) 290-2688.

Supplement dated September 24, 2018 (“Supplement”) to the Class I Shares and Class N Shares Summary Prospectus and Prospectus, each dated January 29, 2018, as amended (“Prospectus”), of the AQR International Relaxed Constraint Equity Fund (the “Fund”)

This Supplement updates certain information contained in the Summary Prospectus and Prospectus. Please review this important information carefully. You may obtain copies of the Fund’s Summary Prospectus, Prospectus and Statement of Additional Information free of charge, upon request, by calling (866) 290-2688, or by writing to AQR Funds, P.O. Box 2248, Denver, CO 80201-2248.

Effective September 24, 2018, the fee table in the section entitled “Fees and Expenses of the Fund” on page 1 of the Summary Prospectus and 117 of the Prospectus is hereby deleted and replaced in its entirety with the following:

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

	Class I	Class N
Management Fee	0.75%	0.75%
Distribution (12b-1) Fee	None	0.25%
Other Expenses		
Dividends on short sales ¹	0.94%	0.94%
All other expenses	2.12%	2.25%
Total Other Expenses	3.06%	3.19%
Acquired Fund Fees and Expenses ²	0.02%	0.02%
Total Annual Fund Operating Expenses	3.83%	4.21%
Less: Fee Waivers and/or Expense Reimbursements ³	1.92%	2.05%
Total Annual Fund Operating Expenses after Fee Waivers and/or Expense Reimbursements ⁴	1.91%	2.16%

- ¹ When a cash dividend is declared on a stock the Fund has sold short, the Fund is required to pay an amount equal to the dividend to the party from which the Fund has borrowed the stock, and to record the payment as an expense.
- ² Acquired Fund Fees and Expenses reflect the expenses incurred indirectly by the Fund as a result of the Fund’s investments in underlying money market *mutual funds*, exchange-traded funds or other pooled investment vehicles.
- ³ The *Adviser* has contractually agreed to waive its management fee and/or to reimburse expenses of the Fund to the extent necessary to maintain the total annual fund operating expenses (excluding interest, taxes, dividends on short sales, borrowing costs, acquired fund fees and expenses, interest expense relating to short sales, expenses related to class action claims and extraordinary expenses) at no more than 0.95% for Class I Shares and 1.20% for Class N Shares (the “Fee Waiver Agreement”). This arrangement will continue at least through January 28, 2019. The Fee Waiver Agreement may only be terminated with the consent of the *Board of Trustees*, including a majority of the Trustees of the *Trust* who are not “interested persons” of the *Trust* within the meaning of the *1940 Act*. The *Adviser* is entitled to recapture the fees waived and/or expenses reimbursed, only to the extent that the recapture can be made during the thirty-six months following the end of the month during which the *Adviser* waived fees or reimbursed expenses. In no case will the *Adviser* recapture any amount that would cause the aggregate operating expenses of the Fund attributable to a share class during a year in which a repayment is made to exceed the lesser of (i) the applicable limits in effect at the time of the waiver and/or reimbursement, or (ii) the applicable limits in effect at the time of recapture.
- ⁴ Total Annual Fund Operating Expenses after Fee Waivers and/or Expense Reimbursements are 0.97% for Class I Shares and 1.22% for Class N Shares if dividends on short sales are not included.

Supplement dated April 27, 2018 (“Supplement”) to the Class I Shares and Class N Shares Prospectus dated January 29, 2018, as amended (“Prospectus”) of the AQR Large Cap Multi-Style Fund, AQR Small Cap Multi-Style Fund, AQR International Multi-Style Fund, AQR Emerging Multi-Style Fund, AQR TM Large Cap Multi-Style Fund, AQR TM Small Cap Multi-Style Fund, AQR TM International Multi-Style Fund, AQR TM Emerging Multi-Style Fund, AQR Large Cap Momentum Style Fund, AQR Small Cap Momentum Style Fund, AQR International Momentum Style Fund, AQR Emerging Momentum Style Fund, AQR TM Large Cap Momentum Style Fund, AQR TM Small Cap Momentum Style Fund, AQR TM International Momentum Style Fund, AQR Large Cap Defensive Style Fund, AQR International Defensive Style Fund, AQR Emerging Defensive Style Fund, AQR Global Equity Fund, AQR International Equity Fund, AQR Large Cap Relaxed Constraint Equity Fund, AQR Small Cap Relaxed Constraint Equity Fund, AQR International Relaxed Constraint Equity Fund, and AQR Emerging Relaxed Constraint Equity Fund (the “Funds”)

This Supplement updates certain information contained in the Prospectus. Please review this important information carefully. You may obtain copies of the Funds’ Prospectuses and Statement of Additional Information free of charge, upon request, by calling (866) 290-2688, or by writing to AQR Funds, P.O. Box 2248, Denver, CO 80201-2248.

Effective May 1, 2018, the sub-section entitled “Investment Minimums” on page 187 of the Prospectus, in the section entitled “Investing With the AQR Funds,” is hereby deleted in its entirety and replaced with the following:

INVESTMENT MINIMUMS

Each Fund’s Class I Shares and Class N Shares are offered to investors subject to the minimums specified below.

The minimum initial account size is \$5,000,000 for Class I Shares and \$1,000,000 for Class N Shares. This minimum requirement may be modified or reduced with respect to certain eligibility groups as indicated in the following table:

Eligibility Group	Minimum Investment	
	Class I	Class N
Institutional investors	\$100,000*	None
Fee-based and discretionary accounts and programs offered by certain financial intermediaries, such as registered investment advisers, broker-dealers, bank trust departments, wrap fee programs and unified managed accounts	\$100,000*	None
Investors who are not eligible for a reduced minimum	\$5,000,000	\$1,000,000

* There is no minimum investment requirement for this eligibility group with respect to exchanges into another AQR Multi-Style Fund or AQR Momentum Style Fund for investors that owned Class L Shares of an AQR Multi-Style Fund or an AQR Momentum Style Fund prior to April 1, 2015 and who are seeking to exchange out of the AQR Multi-Style Fund or AQR Momentum Style Fund in which they previously held Class L Shares.

Investors or financial advisors may aggregate accounts for purposes of determining whether the above minimum requirements have been met. Investors or financial advisors may also enter into a letter of intent indicating that they intend to meet the minimum investment requirements within an 18-month period.

There is no minimum initial account size in Class I Shares and Class N Shares for: (i) investors that owned Class I Shares or Class N Shares prior to October 31, 2010 or Class L Shares prior to August 11, 2010; (ii) tax-exempt retirement plans of the *Adviser* and its affiliates and rollover accounts from those plans; (iii) employees of the *Adviser* and affiliates, trustees and officers of the *Trust* and members of their immediate families; (iv) investment professionals, employees of broker-dealers or other financial intermediaries, and their immediate family members; and (v) qualified defined contribution plans and 457 plans.

Some financial intermediaries may impose different or additional eligibility and minimum investment requirements. The Funds have the discretion to further modify, waive or reduce the above minimum investment requirements for Class I Shares and Class N Shares.

There is no minimum subsequent investment amount for Class I Shares or Class N Shares.

The Funds reserve the right to refuse any request to purchase shares.

Additionally, effective immediately, the third paragraph of the sub-section entitled "Payments of Redemption Proceeds" on page 195 of the Prospectus, in the section entitled "How to Redeem Class I Shares and Class N Shares," is hereby deleted in its entirety and replaced with the following:

Generally, all redemptions will be in cash. The Funds typically expect to satisfy redemption requests by using holdings of cash or cash equivalents. The Funds may also determine to sell portfolio assets to meet such requests. On a less regular basis, the Funds may satisfy redemption requests by accessing a bank line of credit, participating in an interfund lending program or using other short-term borrowings from the Funds' custodian (if permitted by the custodian). These methods may be used during both normal and stressed market conditions.

AQR Large Cap Multi-Style Fund

Fund Summary — January 29, 2018

Investment Objective

The AQR Large Cap Multi-Style Fund (the “Fund”) seeks long-term capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

	Class I	Class N
Management Fee	0.30%	0.30%
Distribution (12b-1) Fee	None	0.25%
Other Expenses	0.15%	0.16%
Total Annual Fund Operating Expenses	0.45%	0.71%
Less: Fee Waivers and/or Expense Reimbursements ¹	0.00%	0.01%
Total Annual Fund Operating Expenses after Fee Waivers and/or Expense Reimbursements	0.45%	0.70%

¹ The *Adviser* has contractually agreed to waive its management fee and/or to reimburse expenses of the Fund to the extent necessary to maintain the total annual fund operating expenses (excluding interest, taxes, dividends on short sales, borrowing costs, acquired fund fees and expenses, interest expense relating to short sales, expenses related to class action claims and extraordinary expenses) at no more than 0.45% for Class I Shares and 0.70% for Class N Shares (the “Fee Waiver Agreement”). This arrangement will continue at least through January 28, 2019. The Fee Waiver Agreement may only be terminated with the consent of the *Board of Trustees*, including a majority of the Trustees of the *Trust* who are not “interested persons” of the *Trust* within the meaning of the *1940 Act*. The *Adviser* is entitled to recapture the fees waived and/or expenses reimbursed, only to the extent that the recapture can be made during the thirty-six months following the end of the month during which the *Adviser* waived fees or reimbursed expenses. In no case will the *Adviser* recapture any amount that would cause the aggregate operating expenses of the Fund attributable to a share class during a year in which a repayment is made to exceed the lesser of (i) the applicable limits in effect at the time of the waiver and/or reimbursement, or (ii) the applicable limits in effect at the time of recapture.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other *mutual funds*. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same and takes into account the effect of the Fee Waiver Agreement through January 28, 2019, as discussed in Footnote No. 1 to the Fee Table. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class I Shares	\$46	\$144	\$252	\$567
Class N Shares	\$72	\$226	\$394	\$882

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. During the fiscal year ended September 30, 2017, the Fund’s portfolio turnover rate was 61% of the average value of its portfolio.

Principal Investment Strategies of the Fund

The Fund pursues its investment objective by investing, under normal market conditions, at least 80% of its net assets (including borrowings for investment purposes) in equity or equity-related securities (including, but not limited to, exchange-traded funds, equity index futures, equity index swaps and depositary receipts) of large-cap companies.

The Fund combines multiple investment styles, primarily including value, *momentum* and quality, using an integrated approach. In managing the Fund, the *Adviser* seeks to invest in attractively valued companies with positive *momentum* and a stable business. Companies are considered to be good value investments if they appear cheap based on multiple fundamental measures, including price-to-book and price-to-earnings ratios relative to other securities in its relevant universe at the time of purchase. In assessing positive *momentum*, the *Adviser* favors securities with strong medium-term performance relative to other securities in its relevant universe at the time of purchase. Further, the *Adviser* favors stable companies in good business health, including those with strong profitability and stable earnings. The *Adviser* may add to or modify the economic factors employed in selecting securities. There is no guarantee that the Fund’s objective will be met.

The Fund generally invests in large-cap U.S. companies, which the *Adviser* generally considers to be those companies with market capitalizations within the range of the *Russell 1000*[®] *Index* at the time of purchase. The Fund may also invest in mid-cap securities.

The *Adviser* determines the weight of each security in the portfolio using a combination of its assessment of the liquidity of the security, the attractiveness of the security based on each factor described above and additional criteria that form part of the *Adviser's* security selection process. The *Adviser* utilizes portfolio optimization techniques to determine trading activity, taking into account the transaction costs associated with trading each equity instrument.

The Fund invests significantly in common stocks. The Fund may also invest in or use financial futures contracts and other types of equity-linked derivative instruments such as equity swaps and equity index swaps, as well as exchange-traded funds and similar pooled investment vehicles, for hedging purposes, to gain exposure to the equity market and to maintain liquidity to pay for redemptions. A portion of the Fund's assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

To attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

Principal Risks of Investing in the Fund

Risk is inherent in all investing. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly from day to day and over time. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. ***The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.*** The following is a summary description of certain risks of investing in the Fund.

Common Stock Risk: The Fund may invest in, or have exposure to, common stocks. Common stocks are subject to greater fluctuations in market value than certain other asset classes as a result of such factors as a company's business performance, investor perceptions, stock market trends and general economic conditions.

Counterparty Risk: The Fund may enter into various types of derivative contracts. Many of these derivative contracts will be privately negotiated in the over-the-counter market. These contracts also involve exposure to credit risk, since contract performance depends in part on the financial condition of the counterparty. If a privately negotiated over-the-counter contract calls for payments by the Fund, the Fund must be prepared to make such payments when due. In addition, if a counterparty's creditworthiness declines, the Fund may not receive payments owed under the contract, or such payments may be delayed under such circumstances and the value of agreements with such counterparty can be expected to decline, potentially resulting in losses to the Fund.

Derivatives Risk: In general, a derivative instrument typically involves leverage, *i.e.*, it provides exposure to potential gain or loss from a change in the level of the market price of the underlying security, currency or commodity (or a basket or index) in a notional amount that exceeds the amount of cash or assets required to establish or maintain the derivative instrument. Adverse changes in the value or level of the underlying asset or index, which the Fund may not directly own, can result in a loss to the Fund substantially greater than the amount invested in the derivative itself. The use of derivative instruments also exposes the Fund to additional risks and transaction costs. These instruments come in many varieties and have a wide range of potential risks and rewards, and may include, as further described in the section entitled "Principal Investment Strategies of the Fund," futures contracts and swaps. A risk of the Fund's use of derivatives is that the fluctuations in their values may not correlate perfectly with the overall securities markets. Additionally, to the extent the Fund is required to segregate or "set aside" (often referred to as "asset segregation") liquid assets or otherwise cover open positions with respect to certain derivative instruments, the Fund may be required to sell portfolio instruments to meet these asset segregation requirements. There is a possibility that segregation involving a large percentage of the Fund's assets could impede portfolio management or the Fund's ability to meet redemption requests or other current obligations.

Futures Contract Risk: The successful use of futures contracts draws upon the *Adviser's* skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of futures contracts, which may adversely affect the Fund's *NAV* and *total return*, are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the futures contract; (b) possible lack of a liquid secondary market for a futures contract and the resulting inability to close a futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the *Adviser's* inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

Investment in Other Investment Companies Risk: As with other investments, investments in other investment companies, including exchange-traded funds (“ETFs”), are subject to market and manager risk. In addition, if the Fund acquires shares of investment companies, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies. The Fund may invest in money market *mutual funds*. An investment in a money market *mutual fund* is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Although money market *mutual funds* that invest in U.S. government securities seek to preserve the value of the Fund’s investment at \$1.00 per share, it is possible to lose money by investing in a stable NAV money market *mutual fund*. Moreover, recent SEC rule amendments require prime money market *mutual funds* to use floating NAVs that do not preserve the value of the Fund’s investment at \$1.00 per share. These rule amendments may impact the Fund’s use of prime money market *mutual funds* for capital preservation purposes.

Manager Risk: If the *Adviser* makes poor investment decisions, it will negatively affect the Fund’s investment performance.

Market Risk: Market risk is the risk that the markets on which the Fund’s investments trade will increase or decrease in value. Prices may fluctuate widely over short or extended periods in response to company, market or economic news. Markets also tend to move in cycles, with periods of rising and falling prices. If there is a general decline in the securities and other markets, your investment in the Fund may lose value, regardless of the individual results of the securities and other instruments in which the Fund invests.

Mid-Cap Securities Risk: The Fund may invest in, or have exposure to, the securities of mid-cap companies. The prices of securities of mid-cap companies generally are more volatile than those of large capitalization companies and are more likely to be adversely affected than large-cap companies by changes in earnings results and investor expectations or poor economic or market conditions, including those experienced during a recession.

Model and Data Risk: Given the complexity of the investments and strategies of the Fund, the *Adviser* relies heavily on quantitative models and information and data supplied by third parties (“Models and Data”). Models and Data are used to construct sets of transactions and investments, to provide risk management insights, and to assist in hedging the Fund’s investments.

When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon expose the Fund to potential risks. Similarly, any hedging based on faulty Models and Data may prove to be unsuccessful. Some of the models used by the *Adviser* for the Fund are predictive in nature. The use of predictive models has inherent risks. Because predictive models are usually constructed based on historical data supplied by third parties, the success of relying on such models may depend heavily on the accuracy and reliability of the supplied historical data. The Fund bears the risk that the quantitative models used by the *Adviser* will not be successful in selecting companies for investment or in determining the weighting of investment positions that will enable the Fund to achieve its investment objective.

All models rely on correct market data inputs. If incorrect market data is entered into even a well-founded model, the resulting information will be incorrect. However, even if market data is input correctly, “model prices” will often differ substantially from market prices, especially for instruments with complex characteristics, such as derivative instruments.

Momentum Style Risk: Investing in or having exposure to securities with positive *momentum* entails investing in securities that have had above-average recent returns. These securities may be more volatile than a broad cross-section of securities. In addition, there may be periods during which the investment performance of the Fund while using a *momentum* strategy may suffer.

Securities Lending Risk: The Fund’s risk in lending portfolio securities, as with other extensions of credit, consists of the possibility of loss to the Fund due to (i) the inability of the borrower to return the securities, (ii) a delay in receiving additional collateral to adequately cover any fluctuations in the value of securities on loan, (iii) a delay in recovery of the securities, or (iv) the loss of rights in the collateral should the borrower fail financially. In addition, the Fund is responsible for any loss that might result from its investment of the borrower’s collateral.

Value Style Risk: Investing in or having exposure to “value” securities presents the risk that the securities may never reach what the *Adviser* believes are their full market values, either because the market fails to recognize what the *Adviser* considers to be the security’s true value or because the *Adviser* misjudged that value. In addition, there may be periods during which the investment performance of the Fund while using a value strategy may suffer.

Performance Information

The performance information below shows summary performance information for the Fund in a bar chart and an average annual *total returns* table. The information shows you how the Fund's performance has varied year by year and provides some indication of the risks of investing in the Fund. Effective April 1, 2015, the *Board of Trustees* of the *Trust* approved the reclassification of Class L Shares of the Fund as Class I Shares. Prior to April 1, 2015, the performance for the Class I Shares reflects the performance of the share class when it was classified as the Class L Shares of the Fund.

The Fund's past performance (before and after taxes), as provided by the bar chart and performance table that follows, is not an indication of future results. Updated information on the Fund's performance, including its current NAV per share, can be obtained by visiting <https://funds.aqr.com>.

Class I Shares—Total Returns

The bar chart below provides an illustration of how the Fund's performance has varied in each of the indicated calendar years.

Highest Quarterly Return

7.02% (4Q17)

Lowest Quarterly Return

-5.83% (3Q15)

Average Annual Total Returns as of December 31, 2017

The following table compares the Fund's average annual *total returns* for Class I Shares and Class N Shares as of December 31, 2017 to the *Russell 1000® Index*. You cannot invest directly in an index. The table includes all applicable fees and sales charges.

	One Year	Since Inception (March 26, 2013)
AQR Large Cap Multi-Style Fund—Class I		
Return Before Taxes	24.26%	14.09%
Return After Taxes on Distributions	23.61%	13.72%
Return After Taxes on Distributions and Sale of Fund Shares	14.27%	11.23%
AQR Large Cap Multi-Style Fund—Class N		
Return Before Taxes	23.94%	13.83%
<i>Russell 1000® Index</i> (reflects no deductions for fees, expenses or taxes)	21.69%	14.11%

After-tax returns are calculated using the historical highest individual marginal tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns are not relevant to investors who hold their Fund shares through tax-deferred arrangements such as 401(k) plans or individual retirement accounts. After-tax returns are for Class I Shares only. After-tax returns for other classes will vary.

Investment Manager

AQR Small Cap Multi-Style Fund

Fund Summary – January 29, 2018

Investment Objective

The AQR Small Cap Multi-Style Fund (the “Fund”) seeks long-term capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

	Class I	Class N
Management Fee	0.50%	0.50%
Distribution (12b-1) Fee	None	0.25%
Other Expenses	0.19%	0.19%
Acquired Fund Fees and Expenses	0.01%	0.01%
Total Annual Fund Operating Expenses	0.70%	0.95%
Less: Fee Waivers and/or Expense Reimbursements ¹	0.04%	0.04%
Total Annual Fund Operating Expenses after Fee Waivers and/or Expense Reimbursements	0.66%	0.91%

¹ The *Adviser* has contractually agreed to waive its management fee and/or to reimburse expenses of the Fund to the extent necessary to maintain the total annual fund operating expenses (excluding interest, taxes, dividends on short sales, borrowing costs, acquired fund fees and expenses, interest expense relating to short sales, expenses related to class action claims and extraordinary expenses) at no more than 0.65% for Class I Shares and 0.90% for Class N Shares (the “Fee Waiver Agreement”). This arrangement will continue at least through January 28, 2019. The Fee Waiver Agreement may only be terminated with the consent of the *Board of Trustees*, including a majority of the Trustees of the *Trust* who are not “interested persons” of the *Trust* within the meaning of the *1940 Act*. The *Adviser* is entitled to recapture the fees waived and/or expenses reimbursed, only to the extent that the recapture can be made during the thirty-six months following the end of the month during which the *Adviser* waived fees or reimbursed expenses. In no case will the *Adviser* recapture any amount that would cause the aggregate operating expenses of the Fund attributable to a share class during a year in which a repayment is made to exceed the lesser of (i) the applicable limits in effect at the time of the waiver and/or reimbursement, or (ii) the applicable limits in effect at the time of recapture.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other *mutual funds*. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same and takes into account the effect of the Fee Waiver Agreement through January 28, 2019, as discussed in Footnote No. 1 to the Fee Table. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class I Shares	\$67	\$220	\$386	\$ 867
Class N Shares	\$93	\$299	\$522	\$1,163

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. During the fiscal year ended September 30, 2017, the Fund’s portfolio turnover rate was 61% of the average value of its portfolio.

Principal Investment Strategies of the Fund

The Fund pursues its investment objective by investing, under normal market conditions, at least 80% of its net assets (including borrowings for investment purposes) in equity or equity-related securities (including, but not limited to, exchange-traded funds, equity index futures, equity index swaps and depositary receipts) of small-cap companies.

The Fund combines multiple investment styles, primarily including value, *momentum* and quality, using an integrated approach. In managing the Fund, the *Adviser* seeks to invest in attractively valued companies with positive *momentum* and a stable business. Companies are considered to be good value investments if they appear cheap based on multiple fundamental measures, including price-to-book and price-to-earnings ratios relative to other securities in its relevant

universe at the time of purchase. In assessing positive *momentum*, the *Adviser* favors securities with strong medium-term performance relative to other securities in its relevant universe at the time of purchase. Further, the *Adviser* favors stable companies in good business health, including those with strong profitability and stable earnings. The *Adviser* may add to or modify the economic factors employed in selecting securities. There is no guarantee that the Fund's objective will be met.

The Fund generally invests in small-cap U.S. companies, which the *Adviser* generally considers to be those companies with market capitalizations within the range of the *Russell 2000*[®] *Index* at the time of purchase.

The *Adviser* determines the weight of each security in the portfolio using a combination of its assessment of the liquidity of the security, the attractiveness of the security based on each factor described above and additional criteria that form part of the *Adviser's* security selection process. The *Adviser* utilizes portfolio optimization techniques to determine trading activity, taking into account the transaction costs associated with trading each equity instrument.

The Fund invests significantly in common stocks. The Fund may also invest in or use financial futures contracts and other types of equity-linked derivative instruments such as equity swaps and equity index swaps, as well as exchange-traded funds and similar pooled investment vehicles, for hedging purposes, to gain exposure to the equity market and to maintain liquidity to pay for redemptions. A portion of the Fund's assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

To attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

Principal Risks of Investing in the Fund

Risk is inherent in all investing. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly from day to day and over time. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. ***The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.*** The following is a summary description of certain risks of investing in the Fund.

Common Stock Risk: The Fund may invest in, or have exposure to, common stocks. Common stocks are subject to greater fluctuations in market value than certain other asset classes as a result of such factors as a company's business performance, investor perceptions, stock market trends and general economic conditions.

Counterparty Risk: The Fund may enter into various types of derivative contracts. Many of these derivative contracts will be privately negotiated in the over-the-counter market. These contracts also involve exposure to credit risk, since contract performance depends in part on the financial condition of the counterparty. If a privately negotiated over-the-counter contract calls for payments by the Fund, the Fund must be prepared to make such payments when due. In addition, if a counterparty's creditworthiness declines, the Fund may not receive payments owed under the contract, or such payments may be delayed under such circumstances and the value of agreements with such counterparty can be expected to decline, potentially resulting in losses to the Fund.

Derivatives Risk: In general, a derivative instrument typically involves leverage, *i.e.*, it provides exposure to potential gain or loss from a change in the level of the market price of the underlying security, currency or commodity (or a basket or index) in a notional amount that exceeds the amount of cash or assets required to establish or maintain the derivative instrument. Adverse changes in the value or level of the underlying asset or index, which the Fund may not directly own, can result in a loss to the Fund substantially greater than the amount invested in the derivative itself. The use of derivative instruments also exposes the Fund to additional risks and transaction costs. These instruments come in many varieties and have a wide range of potential risks and rewards, and may include, as further described in the section entitled "Principal Investment Strategies of the Fund," futures contracts and swaps. A risk of the Fund's use of derivatives is that the fluctuations in their values may not correlate perfectly with the overall securities markets. Additionally, to the extent the Fund is required to segregate or "set aside" (often referred to as "asset segregation") liquid assets or otherwise cover open positions with respect to certain derivative instruments, the Fund may be required to sell portfolio instruments to meet these asset segregation requirements. There is a possibility that segregation involving a large percentage of the Fund's assets could impede portfolio management or the Fund's ability to meet redemption requests or other current obligations.

Futures Contract Risk: The successful use of futures contracts draws upon the *Adviser's* skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of futures contracts, which may adversely affect the Fund's *NAV* and *total return*, are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the futures contract; (b) possible lack of a liquid secondary market for a futures contract and the resulting inability to close a futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the *Adviser's* inability to

predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

High Portfolio Turnover Risk: The investment techniques and strategies utilized by the Fund, including investments made on a shorter-term basis or in derivative instruments or instruments with a maturity of one year or less at the time of acquisition, may result in frequent portfolio trading and high portfolio turnover. High portfolio turnover rates will cause the Fund to incur higher levels of brokerage fees and commissions, which may reduce performance, and may cause higher levels of current tax liability to shareholders in the Fund.

Investment in Other Investment Companies Risk: As with other investments, investments in other investment companies, including exchange-traded funds (“ETFs”), are subject to market and manager risk. In addition, if the Fund acquires shares of investment companies, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies. The Fund may invest in money market *mutual funds*. An investment in a money market *mutual fund* is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Although money market *mutual funds* that invest in U.S. government securities seek to preserve the value of the Fund’s investment at \$1.00 per share, it is possible to lose money by investing in a stable NAV money market *mutual fund*. Moreover, recent SEC rule amendments require prime money market *mutual funds* to use floating NAVs that do not preserve the value of the Fund’s investment at \$1.00 per share. These rule amendments may impact the Fund’s use of prime money market *mutual funds* for capital preservation purposes.

Manager Risk: If the *Adviser* makes poor investment decisions, it will negatively affect the Fund’s investment performance.

Market Risk: Market risk is the risk that the markets on which the Fund’s investments trade will increase or decrease in value. Prices may fluctuate widely over short or extended periods in response to company, market or economic news. Markets also tend to move in cycles, with periods of rising and falling prices. If there is a general decline in the securities and other markets, your investment in the Fund may lose value, regardless of the individual results of the securities and other instruments in which the Fund invests.

Model and Data Risk: Given the complexity of the investments and strategies of the Fund, the *Adviser* relies heavily on quantitative models and information and data supplied by third parties (“Models and Data”). Models and Data are used to construct sets of transactions and investments, to provide risk management insights, and to assist in hedging the Fund’s investments.

When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon expose the Fund to potential risks. Similarly, any hedging based on faulty Models and Data may prove to be unsuccessful. Some of the models used by the *Adviser* for the Fund are predictive in nature. The use of predictive models has inherent risks. Because predictive models are usually constructed based on historical data supplied by third parties, the success of relying on such models may depend heavily on the accuracy and reliability of the supplied historical data. The Fund bears the risk that the quantitative models used by the *Adviser* will not be successful in selecting companies for investment or in determining the weighting of investment positions that will enable the Fund to achieve its investment objective.

All models rely on correct market data inputs. If incorrect market data is entered into even a well-founded model, the resulting information will be incorrect. However, even if market data is input correctly, “model prices” will often differ substantially from market prices, especially for instruments with complex characteristics, such as derivative instruments.

Momentum Style Risk: Investing in or having exposure to securities with positive *momentum* entails investing in securities that have had above-average recent returns. These securities may be more volatile than a broad cross-section of securities. In addition, there may be periods during which the investment performance of the Fund while using a *momentum* strategy may suffer.

Securities Lending Risk: The Fund’s risk in lending portfolio securities, as with other extensions of credit, consists of the possibility of loss to the Fund due to (i) the inability of the borrower to return the securities, (ii) a delay in receiving additional collateral to adequately cover any fluctuations in the value of securities on loan, (iii) a delay in recovery of the securities, or (iv) the loss of rights in the collateral should the borrower fail financially. In addition, the Fund is responsible for any loss that might result from its investment of the borrower’s collateral.

Small-Cap Securities Risk: Investments in or exposure to the securities of companies with smaller market capitalizations involve higher risks in some respects than do investments in securities of larger companies. For example, prices of such securities are often more volatile than prices of large capitalization securities. In addition, due to thin trading in some such securities, an investment in these securities may be more illiquid (*i.e.*, harder to sell) than that of larger capitalization securities. Smaller capitalization companies also fail more often than larger companies and may have more limited management and financial resources than larger companies.

Value Style Risk: Investing in or having exposure to “value” securities presents the risk that the securities may never reach what the *Adviser* believes are their full market values, either because the market fails to recognize what the *Adviser* considers to be the security’s true value or because the *Adviser* misjudged that value. In addition, there may be periods during which the investment performance of the Fund while using a value strategy may suffer.

Performance Information

The performance information below shows summary performance information for the Fund in a bar chart and an average annual *total returns* table. The information shows you how the Fund’s performance has varied year by year and provides some indication of the risks of investing in the Fund. Effective April 1, 2015, the *Board of Trustees* of the *Trust* approved the reclassification of Class L Shares of the Fund as Class I Shares. Prior to April 1, 2015, the performance for the Class I Shares reflects the performance of the share class when it was classified as the Class L Shares of the Fund.

The Fund’s past performance (before and after taxes), as provided by the bar chart and performance table that follows, is not an indication of future results. Updated information on the Fund’s performance, including its current NAV per share, can be obtained by visiting <https://funds.aqr.com>.

Class I Shares—Total Returns

The bar chart below provides an illustration of how the Fund’s performance has varied in each of the indicated calendar years.

Highest Quarterly Return

10.11% (4Q16)

Lowest Quarterly Return

-9.16% (3Q15)

Average Annual Total Returns as of December 31, 2017

The following table compares the Fund’s average annual *total returns* for Class I Shares and Class N Shares as of December 31, 2017 to the *Russell 2000*[®] *Index*. You cannot invest directly in an index. The table includes all applicable fees and sales charges.

	One Year	Since Inception (March 26, 2013)
AQR Small Cap Multi-Style Fund—Class I		
Return Before Taxes	9.29%	12.14%
Return After Taxes on Distributions	6.06%	11.03%
Return After Taxes on Distributions and Sale of Fund Shares	6.61%	9.35%
AQR Small Cap Multi-Style Fund—Class N		
Return Before Taxes	9.07%	11.86%
<i>Russell 2000</i> [®] <i>Index</i> (reflects no deductions for fees, expenses or taxes)	14.65%	12.12%

After-tax returns are calculated using the historical highest individual marginal tax rates and do not reflect the impact of state and local taxes. In some cases, the return after taxes on distributions and sale of Fund shares may exceed the return after taxes on distributions due to an assumed benefit from any losses on a sale of Fund shares at the end of the measurement period. Actual after-tax returns depend on an investor’s tax situation and may differ from those shown, and after-tax returns are not relevant to investors who hold their Fund shares through tax-deferred arrangements such as 401(k) plans or individual retirement accounts. After-tax returns are for Class I Shares only. After-tax returns for other classes will vary.

Investment Manager

The Fund’s investment manager is AQR Capital Management, LLC.

AQR International Multi-Style Fund

Fund Summary — January 29, 2018

Investment Objective

The AQR International Multi-Style Fund (the “Fund”) seeks long-term capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

	Class I	Class N
Management Fee	0.45%	0.45%
Distribution (12b-1) Fee	None	0.25%
Other Expenses	0.20%	0.21%
Total Annual Fund Operating Expenses	0.65%	0.91%
Less: Fee Waivers and/or Expense Reimbursements ¹	0.05%	0.06%
Total Annual Fund Operating Expenses after Fee Waivers and/or Expense Reimbursements	0.60%	0.85%

¹ The *Adviser* has contractually agreed to waive its management fee and/or to reimburse expenses of the Fund to the extent necessary to maintain the total annual fund operating expenses (excluding interest, taxes, dividends on short sales, borrowing costs, acquired fund fees and expenses, interest expense relating to short sales, expenses related to class action claims and extraordinary expenses) at no more than 0.60% for Class I Shares and 0.85% for Class N Shares (the “Fee Waiver Agreement”). This arrangement will continue at least through January 28, 2019. The Fee Waiver Agreement may only be terminated with the consent of the *Board of Trustees*, including a majority of the Trustees of the *Trust* who are not “interested persons” of the *Trust* within the meaning of the *1940 Act*. The *Adviser* is entitled to recapture the fees waived and/or expenses reimbursed, only to the extent that the recapture can be made during the thirty-six months following the end of the month during which the *Adviser* waived fees or reimbursed expenses. In no case will the *Adviser* recapture any amount that would cause the aggregate operating expenses of the Fund attributable to a share class during a year in which a repayment is made to exceed the lesser of (i) the applicable limits in effect at the time of the waiver and/or reimbursement, or (ii) the applicable limits in effect at the time of recapture.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other *mutual funds*. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same and takes into account the effect of the Fee Waiver Agreement through January 28, 2019, as discussed in Footnote No. 1 to the Fee Table. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class I Shares	\$61	\$203	\$357	\$ 806
Class N Shares	\$87	\$284	\$498	\$1,114

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. During the fiscal year ended September 30, 2017, the Fund’s portfolio turnover rate was 55% of the average value of its portfolio.

Principal Investment Strategies of the Fund

The Fund pursues its investment objective by investing, under normal market conditions, at least 80% of its net assets (including borrowings for investment purposes) in equity or equity-related securities (including, but not limited to, exchange-traded funds, equity index futures, equity index swaps and depositary receipts) of non-U.S. companies.

The Fund combines multiple investment styles, primarily including value, *momentum* and quality, using an integrated approach. In managing the Fund, the *Adviser* seeks to invest in attractively valued companies with positive *momentum* and a stable business. Companies are considered to be good value investments if they appear cheap based on multiple fundamental measures, including price-to-book and price-to-earnings ratios relative to other securities in its relevant universe at the time of purchase. In assessing positive *momentum*, the *Adviser* favors securities with strong medium-term performance relative to other securities in its relevant universe at the time of purchase. Further, the *Adviser* favors stable companies in good business health, including those with strong profitability and stable earnings. The *Adviser* may add to or modify the economic factors employed in selecting securities. There is no guarantee that the Fund’s objective will be met.

The Fund will generally invest in developed markets outside of the U.S. As of the date of this prospectus, the *Adviser* considers developed markets outside of the U.S. to be those countries that are included in the *MSCI World ex-U.S. Index* at the time of purchase.

The Fund generally invests in large-cap companies, which the *Adviser* generally considers to be those companies with market capitalizations within the range of the *MSCI World ex-U.S. Index* at the time of purchase. Although the Fund does not limit its investments to any one country, the Fund may invest in any one country without limit.

The *Adviser* determines the weight of each security in the portfolio using a combination of its assessment of the liquidity of the security, the attractiveness of the security based on each factor described above and additional criteria that form part of the *Adviser's* security selection process. The *Adviser* utilizes portfolio optimization techniques to determine trading activity, taking into account the transaction costs associated with trading each equity instrument.

The Fund invests significantly in common stocks. The Fund may also invest in or use financial futures contracts, forward foreign currency contracts and other types of equity-linked derivative instruments such as equity swaps and equity index swaps, as well as exchange-traded funds and similar pooled investment vehicles, for hedging purposes, to gain exposure to the equity market and to maintain liquidity to pay for redemptions. A portion of the Fund's assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

To attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

Principal Risks of Investing in the Fund

Risk is inherent in all investing. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly from day to day and over time. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. ***The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.*** The following is a summary description of certain risks of investing in the Fund.

Common Stock Risk: The Fund may invest in, or have exposure to, common stocks. Common stocks are subject to greater fluctuations in market value than certain other asset classes as a result of such factors as a company's business performance, investor perceptions, stock market trends and general economic conditions.

Counterparty Risk: The Fund may enter into various types of derivative contracts. Many of these derivative contracts will be privately negotiated in the over-the-counter market. These contracts also involve exposure to credit risk, since contract performance depends in part on the financial condition of the counterparty. If a privately negotiated over-the-counter contract calls for payments by the Fund, the Fund must be prepared to make such payments when due. In addition, if a counterparty's creditworthiness declines, the Fund may not receive payments owed under the contract, or such payments may be delayed under such circumstances and the value of agreements with such counterparty can be expected to decline, potentially resulting in losses to the Fund.

Currency Risk: Currency risk is the risk that changes in currency exchange rates will negatively affect securities denominated in, and/or receiving revenues in, foreign currencies. The liquidity and trading value of foreign currencies could be affected by global economic factors, such as inflation, interest rate levels, and trade balances among countries, as well as the actions of sovereign governments and central banks. Adverse changes in currency exchange rates (relative to the U.S. dollar) may erode or reverse any potential gains from the Fund's investments in securities denominated in a foreign currency or may widen existing losses.

Derivatives Risk: In general, a derivative instrument typically involves leverage, *i.e.*, it provides exposure to potential gain or loss from a change in the level of the market price of the underlying security, currency or commodity (or a basket or index) in a notional amount that exceeds the amount of cash or assets required to establish or maintain the derivative instrument. Adverse changes in the value or level of the underlying asset or index, which the Fund may not directly own, can result in a loss to the Fund substantially greater than the amount invested in the derivative itself. The use of derivative instruments also exposes the Fund to additional risks and transaction costs. These instruments come in many varieties and have a wide range of potential risks and rewards, and may include, as further described in the section entitled "Principal Investment Strategies of the Fund," futures contracts, swaps and forward foreign currency contracts. A risk of the Fund's use of derivatives is that the fluctuations in their values may not correlate perfectly with the overall securities markets. Additionally, to the extent the Fund is required to segregate or "set aside" (often referred to as "asset segregation") liquid assets or otherwise cover open positions with respect to certain derivative instruments, the Fund may be required to sell portfolio instruments to meet these asset segregation requirements. There is a possibility that segregation involving a large percentage of the Fund's assets could impede portfolio management or the Fund's ability to meet redemption requests or other current obligations.

Foreign Investments Risk: Foreign investments often involve special risks not present in U.S. investments that can increase the chances that the Fund will lose money. These risks include:

- The Fund generally holds its foreign instruments and cash in foreign banks and securities depositories, which may be recently organized or new to the foreign custody business and may be subject to only limited or no regulatory oversight.
- Changes in foreign currency exchange rates can affect the value of the Fund's portfolio.
- The economies of certain foreign markets may not compare favorably with the economy of the United States with respect to such issues as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- The governments of certain countries may prohibit or impose substantial restrictions on foreign investments in their capital markets or in certain industries.
- Many foreign governments do not supervise and regulate stock exchanges, brokers and the sale of securities to the same extent as does the United States and may not have laws to protect investors that are comparable to U.S. securities laws.
- Settlement and clearance procedures in certain foreign markets may result in delays in payment for or delivery of securities not typically associated with settlement and clearance of U.S. investments.

Forward and Futures Contract Risk: The successful use of forward and futures contracts draws upon the *Adviser's* skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of forward and futures contracts, which may adversely affect the Fund's *NAV* and *total return*, are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the *Adviser's* inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

High Portfolio Turnover Risk: The investment techniques and strategies utilized by the Fund, including investments made on a shorter-term basis or in derivative instruments or instruments with a maturity of one year or less at the time of acquisition, may result in frequent portfolio trading and high portfolio turnover. High portfolio turnover rates will cause the Fund to incur higher levels of brokerage fees and commissions, which may reduce performance, and may cause higher levels of current tax liability to shareholders in the Fund.

Investment in Other Investment Companies Risk: As with other investments, investments in other investment companies, including exchange-traded funds ("ETFs"), are subject to market and manager risk. In addition, if the Fund acquires shares of investment companies, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies. The Fund may invest in money market *mutual funds*. An investment in a money market *mutual fund* is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Although money market *mutual funds* that invest in U.S. government securities seek to preserve the value of the Fund's investment at \$1.00 per share, it is possible to lose money by investing in a stable *NAV* money market *mutual fund*. Moreover, recent *SEC* rule amendments require prime money market *mutual funds* to use floating *NAVs* that do not preserve the value of the Fund's investment at \$1.00 per share. These rule amendments may impact the Fund's use of prime money market *mutual funds* for capital preservation purposes.

Manager Risk: If the *Adviser* makes poor investment decisions, it will negatively affect the Fund's investment performance.

Market Risk: Market risk is the risk that the markets on which the Fund's investments trade will increase or decrease in value. Prices may fluctuate widely over short or extended periods in response to company, market or economic news. Markets also tend to move in cycles, with periods of rising and falling prices. If there is a general decline in the securities and other markets, your investment in the Fund may lose value, regardless of the individual results of the securities and other instruments in which the Fund invests.

Model and Data Risk: Given the complexity of the investments and strategies of the Fund, the *Adviser* relies heavily on quantitative models and information and data supplied by third parties ("Models and Data"). Models and Data are used to construct sets of transactions and investments, to provide risk management insights, and to assist in hedging the Fund's investments.

When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon expose the Fund to potential risks. Similarly, any hedging based on faulty Models and Data may prove to be unsuccessful. Some of the models used by the *Adviser* for the Fund are predictive in nature. The use of predictive models has inherent risks. Because predictive models are usually constructed based on historical data supplied by third parties, the success of relying on such models may depend heavily on the accuracy and reliability of the supplied historical data. The Fund bears the risk that the quantitative models used by the *Adviser* will not be successful in selecting companies for investment or in determining the weighting of investment positions that will enable the Fund to achieve its investment objective.

All models rely on correct market data inputs. If incorrect market data is entered into even a well-founded model, the resulting information will be incorrect. However, even if market data is input correctly, “model prices” will often differ substantially from market prices, especially for instruments with complex characteristics, such as derivative instruments.

Momentum Style Risk: Investing in or having exposure to securities with positive *momentum* entails investing in securities that have had above-average recent returns. These securities may be more volatile than a broad cross-section of securities. In addition, there may be periods during which the investment performance of the Fund while using a *momentum* strategy may suffer.

Securities Lending Risk: The Fund’s risk in lending portfolio securities, as with other extensions of credit, consists of the possibility of loss to the Fund due to (i) the inability of the borrower to return the securities, (ii) a delay in receiving additional collateral to adequately cover any fluctuations in the value of securities on loan, (iii) a delay in recovery of the securities, or (iv) the loss of rights in the collateral should the borrower fail financially. In addition, the Fund is responsible for any loss that might result from its investment of the borrower’s collateral.

Value Style Risk: Investing in or having exposure to “value” securities presents the risk that the securities may never reach what the *Adviser* believes are their full market values, either because the market fails to recognize what the *Adviser* considers to be the security’s true value or because the *Adviser* misjudged that value. In addition, there may be periods during which the investment performance of the Fund while using a value strategy may suffer.

Performance Information

The performance information below shows summary performance information for the Fund in a bar chart and an average annual *total returns* table. The information shows you how the Fund’s performance has varied year by year and provides some indication of the risks of investing in the Fund. Effective April 1, 2015, the *Board of Trustees* of the *Trust* approved the reclassification of Class L Shares of the Fund as Class I Shares. Prior to April 1, 2015, the performance for the Class I Shares reflects the performance of the share class when it was classified as the Class L Shares of the Fund.

The Fund’s past performance (before and after taxes), as provided by the bar chart and performance table that follows, is not an indication of future results. Updated information on the Fund’s performance, including its current NAV per share, can be obtained by visiting <https://funds.aqr.com>.

Class I Shares—Total Returns

The bar chart below provides an illustration of how the Fund’s performance has varied in each of the indicated calendar years.

Highest Quarterly Return

7.90% (1Q17)

Lowest Quarterly Return

-9.65% (3Q15)

Average Annual Total Returns as of December 31, 2017

The following table compares the Fund's average annual *total returns* for Class I Shares and Class N Shares as of December 31, 2017 to the *MSCI World ex-USA Index*. You cannot invest directly in an index. The table includes all applicable fees and sales charges.

	One Year	Since Inception (March 26, 2013)
AQR International Multi-Style Fund—Class I		
Return Before Taxes	24.96%	6.11%
Return After Taxes on Distributions	24.44%	5.69%
Return After Taxes on Distributions and Sale of Fund Shares	14.89%	4.81%
AQR International Multi-Style Fund—Class N		
Return Before Taxes	24.62%	5.84%
<i>MSCI World ex-USA Index</i> (reflects no deductions for fees, expenses or taxes)	24.21%	6.80%

After-tax returns are calculated using the historical highest individual marginal tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns are not relevant to investors who hold their Fund shares through tax-deferred arrangements such as 401(k) plans or individual retirement accounts. After-tax returns are for Class I Shares only. After-tax returns for other classes will vary.

Investment Manager

The Fund's investment manager is AQR Capital Management, LLC.

Portfolio Managers

Name	Portfolio Manager of the Fund Since	Title
Clifford S. Asness, Ph.D., M.B.A.	March 26, 2013	Managing and Founding Principal of the <i>Adviser</i>
Andrea Frazzini, Ph.D., M.S.	March 26, 2013	Principal of the <i>Adviser</i>

AQR Emerging Multi-Style Fund

Fund Summary – January 29, 2018

Investment Objective

The AQR Emerging Multi-Style Fund (the “Fund”) seeks long-term capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

	Class I	Class N
Management Fee	0.60%	0.60%
Distribution (12b-1) Fee	None	0.25%
Other Expenses	0.29%	0.29%
Total Annual Fund Operating Expenses	0.89%	1.14%
Less: Fee Waivers and/or Expense Reimbursements ¹	0.14%	0.14%
Total Annual Fund Operating Expenses after Fee Waivers and/or Expense Reimbursements	0.75%	1.00%

¹ The *Adviser* has contractually agreed to waive its management fee and/or to reimburse expenses of the Fund to the extent necessary to maintain the total annual fund operating expenses (excluding interest, taxes, dividends on short sales, borrowing costs, acquired fund fees and expenses, interest expense relating to short sales, expenses related to class action claims and extraordinary expenses) at no more than 0.75% for Class I Shares and 1.00% for Class N Shares (the “Fee Waiver Agreement”). This arrangement will continue at least through January 28, 2019. The Fee Waiver Agreement may only be terminated with the consent of the *Board of Trustees*, including a majority of the Trustees of the *Trust* who are not “interested persons” of the *Trust* within the meaning of the *1940 Act*. The *Adviser* is entitled to recapture the fees waived and/or expenses reimbursed, only to the extent that the recapture can be made during the thirty-six months following the end of the month during which the *Adviser* waived fees or reimbursed expenses. In no case will the *Adviser* recapture any amount that would cause the aggregate operating expenses of the Fund attributable to a share class during a year in which a repayment is made to exceed the lesser of (i) the applicable limits in effect at the time of the waiver and/or reimbursement, or (ii) the applicable limits in effect at the time of recapture.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other *mutual funds*. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same and takes into account the effect of the Fee Waiver Agreement through January 28, 2019, as discussed in Footnote No. 1 to the Fee Table. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class I Shares	\$ 77	\$270	\$479	\$1,083
Class N Shares	\$102	\$348	\$614	\$1,374

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. During the fiscal year ended September 30, 2017, the Fund’s portfolio turnover rate was 53% of the average value of its portfolio.

Principal Investment Strategies of the Fund

The Fund pursues its investment objective by investing, under normal market conditions, at least 80% of its net assets (including borrowings for investment purposes) in equity or equity-related instruments (including, but not limited to, exchange-traded funds, equity index futures, equity index swaps and depositary receipts) of emerging market companies.

The Fund combines multiple investment styles, primarily including value, *momentum* and quality, using an integrated approach. In managing the Fund, the *Adviser* seeks to invest in attractively valued companies with positive *momentum* and a stable business. Companies are considered to be good value investments if they appear cheap based on multiple fundamental measures, including price-to-book and price-to-earnings ratios relative to other securities in its relevant

universe at the time of purchase. In assessing positive *momentum*, the *Adviser* favors securities with strong medium-term performance relative to other securities in its relevant universe at the time of purchase. Further, the *Adviser* favors stable companies in good business health, including those with strong profitability and stable earnings. The *Adviser* may add to or modify the economic factors employed in selecting securities. There is no guarantee that the Fund's objective will be met.

A company will be considered to be an emerging market company if it is organized, domiciled, or has a principal place of business in an emerging market. Emerging markets include countries that are included in the *MSCI Emerging Markets Index* at the time of purchase. Equity-related instruments include instruments that provide exposure to the change in value of an emerging market company. The Fund may also invest in, and have exposure to, non-emerging market companies if the *Adviser* considers it advisable to achieve the Fund's investment objective.

The Fund generally invests in large- and mid-cap companies, which the *Adviser* generally considers to be those companies with market capitalizations within the range of the *MSCI Emerging Markets Index* at the time of purchase. Although the Fund does not limit its investments to any one country, the Fund may invest in any one country without limit.

The *Adviser* determines the weight of each security in the portfolio using a combination of its assessment of the liquidity of the security, the attractiveness of the security based on each factor described above and additional criteria that form part of the *Adviser's* security selection process. The *Adviser* utilizes portfolio optimization techniques to determine trading activity, taking into account the transaction costs associated with trading each equity instrument.

The Fund invests significantly in common stocks. The Fund may also invest in or use financial futures contracts, forward foreign currency contracts and other types of equity-linked derivative instruments such as equity swaps and equity index swaps, as well as exchange-traded-funds and similar pooled investment vehicles, for hedging purposes, to gain exposure to the equity market and to maintain liquidity to pay for redemptions. A portion of the Fund's assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

To attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

Principal Risks of Investing in the Fund

Risk is inherent in all investing. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly from day to day and over time. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. ***The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.*** The following is a summary description of certain risks of investing in the Fund.

Common Stock Risk: The Fund may invest in, or have exposure to, common stocks. Common stocks are subject to greater fluctuations in market value than certain other asset classes as a result of such factors as a company's business performance, investor perceptions, stock market trends and general economic conditions.

Counterparty Risk: The Fund may enter into various types of derivative contracts. Many of these derivative contracts will be privately negotiated in the over-the-counter market. These contracts also involve exposure to credit risk, since contract performance depends in part on the financial condition of the counterparty. If a privately negotiated over-the-counter contract calls for payments by the Fund, the Fund must be prepared to make such payments when due. In addition, if a counterparty's creditworthiness declines, the Fund may not receive payments owed under the contract, or such payments may be delayed under such circumstances and the value of agreements with such counterparty can be expected to decline, potentially resulting in losses to the Fund.

Currency Risk: Currency risk is the risk that changes in currency exchange rates will negatively affect securities denominated in, and/or receiving revenues in, foreign currencies. The liquidity and trading value of foreign currencies could be affected by global economic factors, such as inflation, interest rate levels, and trade balances among countries, as well as the actions of sovereign governments and central banks. Adverse changes in currency exchange rates (relative to the U.S. dollar) may erode or reverse any potential gains from the Fund's investments in securities denominated in a foreign currency or may widen existing losses.

Derivatives Risk: In general, a derivative instrument typically involves leverage, *i.e.*, it provides exposure to potential gain or loss from a change in the level of the market price of the underlying security, currency or commodity (or a basket or index) in a notional amount that exceeds the amount of cash or assets required to establish or maintain the derivative instrument. Adverse changes in the value or level of the underlying asset or index, which the Fund may not directly own, can result in a loss to the Fund substantially greater than the amount invested in the derivative itself. The use of derivative instruments also exposes the Fund to additional risks and transaction costs. These instruments come in many

varieties and have a wide range of potential risks and rewards, and may include, as further described in the section entitled “Principal Investment Strategies of the Fund,” futures contracts, forward foreign currency contracts and swaps. A risk of the Fund’s use of derivatives is that the fluctuations in their values may not correlate perfectly with the overall securities markets. Additionally, to the extent the Fund is required to segregate or “set aside” (often referred to as “asset segregation”) liquid assets or otherwise cover open positions with respect to certain derivative instruments, the Fund may be required to sell portfolio instruments to meet these asset segregation requirements. There is a possibility that segregation involving a large percentage of the Fund’s assets could impede portfolio management or the Fund’s ability to meet redemption requests or other current obligations.

Emerging Market Risk: The Fund intends to have exposure to emerging markets. Emerging markets are riskier than more developed markets because they tend to develop unevenly and may never fully develop. Investments in emerging markets may be considered speculative. Emerging markets are more likely to experience hyperinflation and currency devaluations, which adversely affect returns to U.S. investors. In addition, many emerging securities markets have far lower trading volumes and less liquidity than developed markets.

Foreign Investments Risk: Foreign investments often involve special risks not present in U.S. investments that can increase the chances that the Fund will lose money. These risks include:

- The Fund generally holds its foreign instruments and cash in foreign banks and securities depositories, which may be recently organized or new to the foreign custody business and may be subject to only limited or no regulatory oversight.
- Changes in foreign currency exchange rates can affect the value of the Fund’s portfolio.
- The economies of certain foreign markets may not compare favorably with the economy of the United States with respect to such issues as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- The governments of certain countries may prohibit or impose substantial restrictions on foreign investments in their capital markets or in certain industries.
- Many foreign governments do not supervise and regulate stock exchanges, brokers and the sale of securities to the same extent as does the United States and may not have laws to protect investors that are comparable to U.S. securities laws.
- Settlement and clearance procedures in certain foreign markets may result in delays in payment for or delivery of securities not typically associated with settlement and clearance of U.S. investments.

Forward and Futures Contract Risk: The successful use of forward and futures contracts draws upon the *Adviser’s* skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of forward and futures contracts, which may adversely affect the Fund’s *NAV* and *total return*, are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the *Adviser’s* inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

High Portfolio Turnover Risk: The investment techniques and strategies utilized by the Fund, including investments made on a shorter-term basis or in derivative instruments or instruments with a maturity of one year or less at the time of acquisition, may result in frequent portfolio trading and high portfolio turnover. High portfolio turnover rates will cause the Fund to incur higher levels of brokerage fees and commissions, which may reduce performance, and may cause higher levels of current tax liability to shareholders in the Fund.

Investment in Other Investment Companies Risk: As with other investments, investments in other investment companies, including exchange-traded funds (“ETFs”), are subject to market and manager risk. In addition, if the Fund acquires shares of investment companies, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies. The Fund may invest in money market *mutual funds*. An investment in a money market *mutual fund* is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Although money market *mutual funds* that invest in U.S. government securities seek to preserve the value of the Fund’s investment at \$1.00 per share, it is possible to lose money by investing in a stable *NAV* money market *mutual fund*. Moreover, recent *SEC* rule amendments require prime money market *mutual funds* to use floating *NAVs* that do not preserve the value of the Fund’s investment at \$1.00 per share. These rule amendments may impact the Fund’s use of prime money market *mutual funds* for capital preservation purposes.

Manager Risk: If the *Adviser* makes poor investment decisions, it will negatively affect the Fund's investment performance.

Market Risk: Market risk is the risk that the markets on which the Fund's investments trade will increase or decrease in value. Prices may fluctuate widely over short or extended periods in response to company, market or economic news. Markets also tend to move in cycles, with periods of rising and falling prices. If there is a general decline in the securities and other markets, your investment in the Fund may lose value, regardless of the individual results of the securities and other instruments in which the Fund invests.

Mid-Cap Securities Risk: The Fund may invest in, or have exposure to, the securities of mid-cap companies. The prices of securities of mid-cap companies generally are more volatile than those of large capitalization companies and are more likely to be adversely affected than large-cap companies by changes in earnings results and investor expectations or poor economic or market conditions, including those experienced during a recession.

Model and Data Risk: Given the complexity of the investments and strategies of the Fund, the *Adviser* relies heavily on quantitative models and information and data supplied by third parties ("Models and Data"). Models and Data are used to construct sets of transactions and investments, to provide risk management insights, and to assist in hedging the Fund's investments.

When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon expose the Fund to potential risks. Similarly, any hedging based on faulty Models and Data may prove to be unsuccessful. Some of the models used by the *Adviser* for the Fund are predictive in nature. The use of predictive models has inherent risks. Because predictive models are usually constructed based on historical data supplied by third parties, the success of relying on such models may depend heavily on the accuracy and reliability of the supplied historical data. The Fund bears the risk that the quantitative models used by the *Adviser* will not be successful in selecting companies for investment or in determining the weighting of investment positions that will enable the Fund to achieve its investment objective.

All models rely on correct market data inputs. If incorrect market data is entered into even a well-founded model, the resulting information will be incorrect. However, even if market data is input correctly, "model prices" will often differ substantially from market prices, especially for instruments with complex characteristics, such as derivative instruments.

Momentum Style Risk: Investing in or having exposure to securities with positive *momentum* entails investing in securities that have had above-average recent returns. These securities may be more volatile than a broad cross-section of securities. In addition, there may be periods during which the investment performance of the Fund while using a *momentum* strategy may suffer.

Securities Lending Risk: The Fund's risk in lending portfolio securities, as with other extensions of credit, consists of the possibility of loss to the Fund due to (i) the inability of the borrower to return the securities, (ii) a delay in receiving additional collateral to adequately cover any fluctuations in the value of securities on loan, (iii) a delay in recovery of the securities, or (iv) the loss of rights in the collateral should the borrower fail financially. In addition, the Fund is responsible for any loss that might result from its investment of the borrower's collateral.

Value Style Risk: Investing in or having exposure to "value" securities presents the risk that the securities may never reach what the *Adviser* believes are their full market values, either because the market fails to recognize what the *Adviser* considers to be the security's true value or because the *Adviser* misjudged that value. In addition, there may be periods during which the investment performance of the Fund while using a value strategy may suffer.

Performance Information

The performance information below shows summary performance information for the Fund in a bar chart and an average annual *total returns* table. The information shows you how the Fund's performance has varied year by year and provides some indication of the risks of investing in the Fund. Effective April 1, 2015, the *Board of Trustees* of the *Trust* approved the reclassification of Class L Shares of the Fund as Class I Shares. Prior to April 1, 2015, the performance for the Class I Shares reflects the performance of the share class when it was classified as the Class L Shares of the Fund.

The Fund's past performance (before and after taxes), as provided by the bar chart and performance table that follows, is not an indication of future results. Updated information on the Fund's performance, including its current NAV per share, can be obtained by visiting <https://funds.aqr.com>.

Class I Shares—Total Returns

The bar chart below provides an illustration of how the Fund's performance has varied in each of the indicated calendar years.

Highest Quarterly Return

12.71% (1Q17)

Lowest Quarterly Return

-18.67% (3Q15)

Average Annual Total Returns as of December 31, 2017

The following table compares the Fund's average annual *total returns* for Class I Shares and Class N Shares as of December 31, 2017 to the *MSCI Emerging Markets Index*. You cannot invest directly in an index. The table includes all applicable fees and sales charges.

	One Year	Since Inception (May 13, 2014)
AQR Emerging Multi-Style Fund—Class I		
Return Before Taxes	36.85%	4.94%
Return After Taxes on Distributions	36.56%	4.51%
Return After Taxes on Distributions and Sale of Fund Shares	21.52%	3.78%
AQR Emerging Multi-Style Fund—Class N		
Return Before Taxes	36.44%	4.69%
<i>MSCI Emerging Markets Index</i> (reflects no deductions for fees, expenses or taxes)	37.28%	6.02%

After-tax returns are calculated using the historical highest individual marginal tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns are not relevant to investors who hold their Fund shares through tax-deferred arrangements such as 401(k) plans or individual retirement accounts. After-tax returns are for Class I Shares only. After-tax returns for other classes will vary.

Investment Manager

The Fund's investment manager is AQR Capital Management, LLC.

Portfolio Managers

Name	Portfolio Manager of the Fund Since	Title

AQR TM Large Cap Multi-Style Fund

Fund Summary – January 29, 2018

Investment Objective

The AQR TM Large Cap Multi-Style Fund (the “Fund”) seeks long-term after-tax capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

	Class I	Class N
Management Fee	0.30%	0.30%
Distribution (12b-1) Fee	None	0.25%
Other Expenses	0.23%	0.23%
Acquired Fund Fees and Expenses	0.01%	0.01%
Total Annual Fund Operating Expenses	0.54%	0.79%
Less: Fee Waivers and/or Expense Reimbursements ¹	0.08%	0.08%
Total Annual Fund Operating Expenses after Fee Waivers and/or Expense Reimbursements	0.46%	0.71%

¹ The *Adviser* has contractually agreed to waive its management fee and/or to reimburse expenses of the Fund to the extent necessary to maintain the total annual fund operating expenses (excluding interest, taxes, dividends on short sales, borrowing costs, acquired fund fees and expenses, interest expense relating to short sales, expenses related to class action claims and extraordinary expenses) at no more than 0.45% for Class I Shares and 0.70% for Class N Shares (the “Fee Waiver Agreement”). This arrangement will continue at least through January 28, 2019. The Fee Waiver Agreement may only be terminated with the consent of the *Board of Trustees*, including a majority of the Trustees of the *Trust* who are not “interested persons” of the *Trust* within the meaning of the *1940 Act*. The *Adviser* is entitled to recapture the fees waived and/or expenses reimbursed, only to the extent that the recapture can be made during the thirty-six months following the end of the month during which the *Adviser* waived fees or reimbursed expenses. In no case will the *Adviser* recapture any amount that would cause the aggregate operating expenses of the Fund attributable to a share class during a year in which a repayment is made to exceed the lesser of (i) the applicable limits in effect at the time of the waiver and/or reimbursement, or (ii) the applicable limits in effect at the time of recapture.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other *mutual funds*. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same and takes into account the effect of the Fee Waiver Agreement through January 28, 2019, as discussed in Footnote No. 1 to the Fee Table. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class I Shares	\$47	\$165	\$294	\$669
Class N Shares	\$73	\$244	\$431	\$970

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. During the fiscal year ended September 30, 2017, the Fund’s portfolio turnover rate was 77% of the average value of its portfolio.

Principal Investment Strategies of the Fund

The Fund pursues its investment objective by investing, under normal market conditions, at least 80% of its net assets (including borrowings for investment purposes) in equity or equity-related securities (including, but not limited to, exchange-traded funds, equity index futures, equity index swaps and depositary receipts) of large-cap companies. The “TM” in the Fund’s name reflects that the Fund employs a “tax management” strategy which considers the potential impact of federal income tax on shareholders’ investment return.

The Fund combines multiple investment styles, primarily including value, *momentum* and quality, using an integrated approach. In managing the Fund, the *Adviser* seeks to invest in attractively valued companies with positive *momentum* and a stable business. Companies are considered to be good value investments if they appear cheap based on multiple fundamental measures, including price-to-book and price-to-earnings ratios relative to other securities in its relevant

universe at the time of purchase. In assessing positive *momentum*, the *Adviser* favors securities with strong medium-term performance relative to other securities in its relevant universe at the time of purchase. Further, the *Adviser* favors stable companies in good business health, including those with strong profitability and stable earnings. The *Adviser* may add to or modify the economic factors employed in selecting securities. There is no guarantee that the Fund's objective will be met.

The Fund generally invests in large-cap U.S. companies, which the *Adviser* generally considers to be those companies with market capitalizations within the range of the *Russell 1000*[®] *Index* at the time of purchase. The Fund may also invest in mid-cap securities.

The *Adviser* determines the weight of each security in the portfolio using a combination of its assessment of the liquidity of the security, the attractiveness of the security based on each factor described above and additional criteria that form part of the *Adviser's* security selection process. The *Adviser* utilizes portfolio optimization techniques to determine trading activity, taking into account the transaction costs and adverse tax consequences associated with trading each equity instrument.

When selecting securities for the portfolio, the *Adviser* also employs a tax management strategy which considers the potential impact of federal income tax on shareholders' investment return. This tax management strategy is generally designed so investors receive lower distributions of realized capital gains than funds that do not take tax consequences into account. Investors should not expect that there will be no capital gain distributions, however, as the Fund will balance investment considerations with tax consequences in making investment decisions. The techniques and strategies that may be used to attempt to reduce the impact of federal income tax on shareholders' investment returns include:

- when believed by the *Adviser* to be appropriate, selling stocks to realize losses, with the specific purpose of offsetting gains;
- deferring realizations of net capital gains;
- limiting portfolio turnover that may result in taxable gains; and
- choosing a tax accounting method that reduces tax liability: for example, using the highest-in, first-out (HIFO) method which sells tax lots of securities that have a higher tax basis before selling tax lots of securities that have a lower tax basis.

The Fund invests significantly in common stocks. The Fund may also invest in or use financial futures contracts and other types of equity-linked derivative instruments such as equity swaps and equity index swaps, as well as exchange-traded funds and similar pooled investment vehicles, for hedging purposes, to gain exposure to the equity market and to maintain liquidity to pay for redemptions. A portion of the Fund's assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

To attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

Principal Risks of Investing in the Fund

Risk is inherent in all investing. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly from day to day and over time. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. ***The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.*** The following is a summary description of certain risks of investing in the Fund.

Common Stock Risk: The Fund may invest in, or have exposure to, common stocks. Common stocks are subject to greater fluctuations in market value than certain other asset classes as a result of such factors as a company's business performance, investor perceptions, stock market trends and general economic conditions.

Counterparty Risk: The Fund may enter into various types of derivative contracts. Many of these derivative contracts will be privately negotiated in the over-the-counter market. These contracts also involve exposure to credit risk, since contract performance depends in part on the financial condition of the counterparty. If a privately negotiated over-the-counter contract calls for payments by the Fund, the Fund must be prepared to make such payments when due. In addition, if a counterparty's creditworthiness declines, the Fund may not receive payments owed under the contract, or such payments may be delayed under such circumstances and the value of agreements with such counterparty can be expected to decline, potentially resulting in losses to the Fund.

Derivatives Risk: In general, a derivative instrument typically involves leverage, *i.e.*, it provides exposure to potential gain or loss from a change in the level of the market price of the underlying security, currency or commodity (or a basket or index) in a notional amount that exceeds the amount of cash or assets required to establish or maintain the derivative instrument. Adverse changes in the value or level of the underlying asset or index, which the Fund may not directly own, can result in a loss to the Fund substantially greater than the amount invested in the derivative itself. The use of derivative instruments also exposes the Fund to additional risks and transaction costs. These instruments come in many varieties and have a wide range of potential risks and rewards, and may include, as further described in the section entitled “Principal Investment Strategies of the Fund,” futures contracts and swaps. A risk of the Fund’s use of derivatives is that the fluctuations in their values may not correlate perfectly with the overall securities markets. Additionally, to the extent the Fund is required to segregate or “set aside” (often referred to as “asset segregation”) liquid assets or otherwise cover open positions with respect to certain derivative instruments, the Fund may be required to sell portfolio instruments to meet these asset segregation requirements. There is a possibility that segregation involving a large percentage of the Fund’s assets could impede portfolio management or the Fund’s ability to meet redemption requests or other current obligations.

Futures Contract Risk: The successful use of futures contracts draws upon the *Adviser’s* skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of futures contracts, which may adversely affect the Fund’s *NAV* and *total return*, are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the futures contract; (b) possible lack of a liquid secondary market for a futures contract and the resulting inability to close a futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the *Adviser’s* inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

High Portfolio Turnover Risk: The investment techniques and strategies utilized by the Fund, including investments made on a shorter-term basis or in derivative instruments or instruments with a maturity of one year or less at the time of acquisition, may result in frequent portfolio trading and high portfolio turnover. High portfolio turnover rates will cause the Fund to incur higher levels of brokerage fees and commissions, which may reduce performance, and may cause higher levels of current tax liability to shareholders in the Fund.

Investment in Other Investment Companies Risk: As with other investments, investments in other investment companies, including exchange-traded funds (“ETFs”), are subject to market and manager risk. In addition, if the Fund acquires shares of investment companies, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies. The Fund may invest in money market *mutual funds*. An investment in a money market *mutual fund* is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Although money market *mutual funds* that invest in U.S. government securities seek to preserve the value of the Fund’s investment at \$1.00 per share, it is possible to lose money by investing in a stable *NAV* money market *mutual fund*. Moreover, recent SEC rule amendments require prime money market *mutual funds* to use floating *NAVs* that do not preserve the value of the Fund’s investment at \$1.00 per share. These rule amendments may impact the Fund’s use of prime money market *mutual funds* for capital preservation purposes.

Manager Risk: If the *Adviser* makes poor investment decisions, it will negatively affect the Fund’s investment performance.

Market Risk: Market risk is the risk that the markets on which the Fund’s investments trade will increase or decrease in value. Prices may fluctuate widely over short or extended periods in response to company, market or economic news. Markets also tend to move in cycles, with periods of rising and falling prices. If there is a general decline in the securities and other markets, your investment in the Fund may lose value, regardless of the individual results of the securities and other instruments in which the Fund invests.

Mid-Cap Securities Risk: The Fund may invest in, or have exposure to, the securities of mid-cap companies. The prices of securities of mid-cap companies generally are more volatile than those of large capitalization companies and are more likely to be adversely affected than large-cap companies by changes in earnings results and investor expectations or poor economic or market conditions, including those experienced during a recession.

Model and Data Risk: Given the complexity of the investments and strategies of the Fund, the *Adviser* relies heavily on quantitative models and information and data supplied by third parties (“Models and Data”). Models and Data are used to construct sets of transactions and investments, to provide risk management insights, and to assist in hedging the Fund’s investments.

When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon expose the Fund to potential risks. Similarly, any hedging based on faulty Models and Data may prove to be unsuccessful. Some of the models used by the *Adviser* for the Fund are predictive in nature. The use of predictive models has inherent risks.

Because predictive models are usually constructed based on historical data supplied by third parties, the success of relying on such models may depend heavily on the accuracy and reliability of the supplied historical data. The Fund bears the risk that the quantitative models used by the *Adviser* will not be successful in selecting companies for investment or in determining the weighting of investment positions that will enable the Fund to achieve its investment objective.

All models rely on correct market data inputs. If incorrect market data is entered into even a well-founded model, the resulting information will be incorrect. However, even if market data is input correctly, “model prices” will often differ substantially from market prices, especially for instruments with complex characteristics, such as derivative instruments.

Momentum Style Risk: Investing in or having exposure to securities with positive *momentum* entails investing in securities that have had above-average recent returns. These securities may be more volatile than a broad cross-section of securities. In addition, there may be periods during which the investment performance of the Fund while using a *momentum* strategy may suffer.

Securities Lending Risk: The Fund’s risk in lending portfolio securities, as with other extensions of credit, consists of the possibility of loss to the Fund due to (i) the inability of the borrower to return the securities, (ii) a delay in receiving additional collateral to adequately cover any fluctuations in the value of securities on loan, (iii) a delay in recovery of the securities, or (iv) the loss of rights in the collateral should the borrower fail financially. In addition, the Fund is responsible for any loss that might result from its investment of the borrower’s collateral.

Tax-Managed Investment Risk: The performance of the Fund may deviate from that of non-tax managed funds and may not provide as high a return before consideration of federal income tax consequences as non-tax managed funds. The Fund’s tax-sensitive investment strategy involves active management with the intent of minimizing the amount of realized gains from the sale of securities; however, market conditions may limit the Fund’s ability to execute such strategy. The Fund’s ability to utilize various tax-management techniques may be curtailed or eliminated in the future by tax legislation or regulation. Although the Fund expects that a smaller portion of its *total return* will consist of taxable distributions to shareholders as compared to non-tax managed funds, there can be no assurance about the size of taxable distributions to shareholders.

Value Style Risk: Investing in or having exposure to “value” securities presents the risk that the securities may never reach what the *Adviser* believes are their full market values, either because the market fails to recognize what the *Adviser* considers to be the security’s true value or because the *Adviser* misjudged that value. In addition, there may be periods during which the investment performance of the Fund while using a value strategy may suffer.

Performance Information

The performance information below shows summary performance information for the Fund in a bar chart and an average annual *total returns* table. The information shows you how the Fund’s performance has varied year by year and provides some indication of the risks of investing in the Fund.

The Fund’s past performance (before and after taxes), as provided by the bar chart and performance table that follows, is not an indication of future results. Updated information on the Fund’s performance, including its current NAV per share, can be obtained by visiting <https://funds.aqr.com>.

Class I Shares—Total Returns

The bar chart below provides an illustration of how the Fund’s performance has varied in each of the indicated calendar years.

Highest Quarterly Return

7.17% (4Q17)

Lowest Quarterly Return

-1.32% (1Q16)

Average Annual Total Returns as of December 31, 2017

The following table compares the Fund's average annual *total returns* for Class I Shares and Class N Shares as of December 31, 2017 to the *Russell 1000[®] Index*. You cannot invest directly in an index. The table includes all applicable fees and sales charges.

	One Year	Since Inception (February 11, 2015)
AQR TM Large Cap Multi-Style Fund—Class I		
Return Before Taxes	24.58%	10.08%
Return After Taxes on Distributions	24.25%	9.80%
Return After Taxes on Distributions and Sale of Fund Shares	14.19%	7.80%
AQR TM Large Cap Multi-Style Fund—Class N		
Return Before Taxes	24.22%	9.76%
<i>Russell 1000[®] Index</i> (reflects no deductions for fees, expenses or taxes)	21.69%	11.33%

After-tax returns are calculated using the historical highest individual marginal tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns are not relevant to investors who hold their Fund shares through tax-deferred arrangements such as 401(k) plans or individual retirement accounts. After-tax returns are for Class I Shares only. After-tax returns for other classes will vary.

Investment Manager

The Fund's investment manager is AQR Capital Management, LLC.

Portfolio Managers

Name	Portfolio Manager of the Fund Since	Title

AQR TM Small Cap Multi-Style Fund

Fund Summary – January 29, 2018

Investment Objective

The AQR TM Small Cap Multi-Style Fund (the “Fund”) seeks long-term after-tax capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

	Class I	Class N
Management Fee	0.50%	0.50%
Distribution (12b-1) Fee	None	0.25%
Other Expenses	0.73%	0.72%
Acquired Fund Fees and Expenses	0.01%	0.01%
Total Annual Fund Operating Expenses	1.24%	1.48%
Less: Fee Waivers and/or Expense Reimbursements ¹	0.58%	0.57%
Total Annual Fund Operating Expenses after Fee Waivers and/or Expense Reimbursements	0.66%	0.91%

¹ The *Adviser* has contractually agreed to waive its management fee and/or to reimburse expenses of the Fund to the extent necessary to maintain the total annual fund operating expenses (excluding interest, taxes, dividends on short sales, borrowing costs, acquired fund fees and expenses, interest expense relating to short sales, expenses related to class action claims and extraordinary expenses) at no more than 0.65% for Class I Shares and 0.90% for Class N Shares (the “Fee Waiver Agreement”). This arrangement will continue at least through January 28, 2019. The Fee Waiver Agreement may only be terminated with the consent of the *Board of Trustees*, including a majority of the Trustees of the *Trust* who are not “interested persons” of the *Trust* within the meaning of the *1940 Act*. The *Adviser* is entitled to recapture the fees waived and/or expenses reimbursed, only to the extent that the recapture can be made during the thirty-six months following the end of the month during which the *Adviser* waived fees or reimbursed expenses. In no case will the *Adviser* recapture any amount that would cause the aggregate operating expenses of the Fund attributable to a share class during a year in which a repayment is made to exceed the lesser of (i) the applicable limits in effect at the time of the waiver and/or reimbursement, or (ii) the applicable limits in effect at the time of recapture.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other *mutual funds*. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same and takes into account the effect of the Fee Waiver Agreement through January 28, 2019, as discussed in Footnote No. 1 to the Fee Table. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class I Shares	\$67	\$336	\$625	\$1,449
Class N Shares	\$93	\$412	\$754	\$1,720

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. During the fiscal year ended September 30, 2017, the Fund’s portfolio turnover rate was 92% of the average value of its portfolio.

Principal Investment Strategies of the Fund

The Fund pursues its investment objective by investing, under normal market conditions, at least 80% of its net assets (including borrowings for investment purposes) in equity or equity-related securities (including, but not limited to, exchange-traded funds, equity index futures, equity index swaps and depositary receipts) of small-cap companies. The “TM” in the Fund’s name reflects that the Fund employs a “tax management” strategy which considers the potential impact of federal income tax on shareholders’ investment return.

The Fund combines multiple investment styles, primarily including value, *momentum* and quality, using an integrated approach. In managing the Fund, the *Adviser* seeks to invest in attractively valued companies with positive *momentum* and a stable business. Companies are considered to be good value investments if they appear cheap based on multiple fundamental measures, including price-to-book and price-to-earnings ratios relative to other securities in its relevant

universe at the time of purchase. In assessing positive *momentum*, the *Adviser* favors securities with strong medium-term performance relative to other securities in its relevant universe at the time of purchase. Further, the *Adviser* favors stable companies in good business health, including those with strong profitability and stable earnings. The *Adviser* may add to or modify the economic factors employed in selecting securities. There is no guarantee that the Fund's objective will be met.

The Fund generally invests in small-cap U.S. companies, which the *Adviser* generally considers to be those companies with market capitalizations within the range of the *Russell 2000*[®] *Index* at the time of purchase.

The *Adviser* determines the weight of each security in the portfolio using a combination of its assessment of the liquidity of the security, the attractiveness of the security based on each factor described above and additional criteria that form part of the *Adviser's* security selection process. The *Adviser* utilizes portfolio optimization techniques to determine trading activity, taking into account the transaction costs and adverse tax consequences associated with trading each equity instrument.

When selecting securities for the portfolio, the *Adviser* also employs a tax management strategy which considers the potential impact of federal income tax on shareholders' investment return. This tax management strategy is generally designed so investors receive lower distributions of realized capital gains than funds that do not take tax consequences into account. Investors should not expect that there will be no capital gain distributions, however, as the Fund will balance investment considerations with tax consequences in making investment decisions. The techniques and strategies that may be used to attempt to reduce the impact of federal income tax on shareholders' investment returns include:

- when believed by the *Adviser* to be appropriate, selling stocks to realize losses, with the specific purpose of offsetting gains;
- deferring realizations of net capital gains;
- limiting portfolio turnover that may result in taxable gains; and
- choosing a tax accounting method that reduces tax liability: for example, using the highest-in, first-out (HIFO) method which sells tax lots of securities that have a higher tax basis before selling tax lots of securities that have a lower tax basis.

The Fund invests significantly in common stocks. The Fund may also invest in or use financial futures contracts and other types of equity-linked derivative instruments such as equity swaps and equity index swaps, as well as exchange-traded funds and similar pooled investment vehicles, for hedging purposes, to gain exposure to the equity market and to maintain liquidity to pay for redemptions. A portion of the Fund's assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

To attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

Principal Risks of Investing in the Fund

Risk is inherent in all investing. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly from day to day and over time. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. ***The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.*** The following is a summary description of certain risks of investing in the Fund.

Common Stock Risk: The Fund may invest in, or have exposure to, common stocks. Common stocks are subject to greater fluctuations in market value than certain other asset classes as a result of such factors as a company's business performance, investor perceptions, stock market trends and general economic conditions.

Counterparty Risk: The Fund may enter into various types of derivative contracts. Many of these derivative contracts will be privately negotiated in the over-the-counter market. These contracts also involve exposure to credit risk, since contract performance depends in part on the financial condition of the counterparty. If a privately negotiated over-the-counter contract calls for payments by the Fund, the Fund must be prepared to make such payments when due. In addition, if a counterparty's creditworthiness declines, the Fund may not receive payments owed under the contract, or such payments may be delayed under such circumstances and the value of agreements with such counterparty can be expected to decline, potentially resulting in losses to the Fund.

Derivatives Risk: In general, a derivative instrument typically involves leverage, *i.e.*, it provides exposure to potential gain or loss from a change in the level of the market price of the underlying security, currency or commodity (or a basket or index) in a notional amount that exceeds the amount of cash or assets required to establish or maintain the derivative

instrument. Adverse changes in the value or level of the underlying asset or index, which the Fund may not directly own, can result in a loss to the Fund substantially greater than the amount invested in the derivative itself. The use of derivative instruments also exposes the Fund to additional risks and transaction costs. These instruments come in many varieties and have a wide range of potential risks and rewards, and may include, as further described in the section entitled “Principal Investment Strategies of the Fund,” futures contracts and swaps. A risk of the Fund’s use of derivatives is that the fluctuations in their values may not correlate perfectly with the overall securities markets. Additionally, to the extent the Fund is required to segregate or “set aside” (often referred to as “asset segregation”) liquid assets or otherwise cover open positions with respect to certain derivative instruments, the Fund may be required to sell portfolio instruments to meet these asset segregation requirements. There is a possibility that segregation involving a large percentage of the Fund’s assets could impede portfolio management or the Fund’s ability to meet redemption requests or other current obligations.

Futures Contract Risk: The successful use of futures contracts draws upon the *Adviser’s* skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of futures contracts, which may adversely affect the Fund’s *NAV* and *total return*, are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the futures contract; (b) possible lack of a liquid secondary market for a futures contract and the resulting inability to close a futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the *Adviser’s* inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

High Portfolio Turnover Risk: The investment techniques and strategies utilized by the Fund, including investments made on a shorter-term basis or in derivative instruments or instruments with a maturity of one year or less at the time of acquisition, may result in frequent portfolio trading and high portfolio turnover. High portfolio turnover rates will cause the Fund to incur higher levels of brokerage fees and commissions, which may reduce performance, and may cause higher levels of current tax liability to shareholders in the Fund.

Investment in Other Investment Companies Risk: As with other investments, investments in other investment companies, including exchange-traded funds (“ETFs”), are subject to market and manager risk. In addition, if the Fund acquires shares of investment companies, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies. The Fund may invest in money market *mutual funds*. An investment in a money market *mutual fund* is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Although money market *mutual funds* that invest in U.S. government securities seek to preserve the value of the Fund’s investment at \$1.00 per share, it is possible to lose money by investing in a stable *NAV* money market *mutual fund*. Moreover, recent *SEC* rule amendments require prime money market *mutual funds* to use floating *NAVs* that do not preserve the value of the Fund’s investment at \$1.00 per share. These rule amendments may impact the Fund’s use of prime money market *mutual funds* for capital preservation purposes.

Manager Risk: If the *Adviser* makes poor investment decisions, it will negatively affect the Fund’s investment performance.

Market Risk: Market risk is the risk that the markets on which the Fund’s investments trade will increase or decrease in value. Prices may fluctuate widely over short or extended periods in response to company, market or economic news. Markets also tend to move in cycles, with periods of rising and falling prices. If there is a general decline in the securities and other markets, your investment in the Fund may lose value, regardless of the individual results of the securities and other instruments in which the Fund invests.

Model and Data Risk: Given the complexity of the investments and strategies of the Fund, the *Adviser* relies heavily on quantitative models and information and data supplied by third parties (“Models and Data”). Models and Data are used to construct sets of transactions and investments, to provide risk management insights, and to assist in hedging the Fund’s investments.

When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon expose the Fund to potential risks. Similarly, any hedging based on faulty Models and Data may prove to be unsuccessful. Some of the models used by the *Adviser* for the Fund are predictive in nature. The use of predictive models has inherent risks. Because predictive models are usually constructed based on historical data supplied by third parties, the success of relying on such models may depend heavily on the accuracy and reliability of the supplied historical data. The Fund bears the risk that the quantitative models used by the *Adviser* will not be successful in selecting companies for investment or in determining the weighting of investment positions that will enable the Fund to achieve its investment objective.

All models rely on correct market data inputs. If incorrect market data is entered into even a well-founded model, the resulting information will be incorrect. However, even if market data is input correctly, “model prices” will often differ substantially from market prices, especially for instruments with complex characteristics, such as derivative instruments.

Momentum Style Risk: Investing in or having exposure to securities with positive *momentum* entails investing in securities that have had above-average recent returns. These securities may be more volatile than a broad cross-section of securities. In addition, there may be periods during which the investment performance of the Fund while using a *momentum* strategy may suffer.

Securities Lending Risk: The Fund’s risk in lending portfolio securities, as with other extensions of credit, consists of the possibility of loss to the Fund due to (i) the inability of the borrower to return the securities, (ii) a delay in receiving additional collateral to adequately cover any fluctuations in the value of securities on loan, (iii) a delay in recovery of the securities, or (iv) the loss of rights in the collateral should the borrower fail financially. In addition, the Fund is responsible for any loss that might result from its investment of the borrower’s collateral.

Small-Cap Securities Risk: Investments in or exposure to the securities of companies with smaller market capitalizations involve higher risks in some respects than do investments in securities of larger companies. For example, prices of such securities are often more volatile than prices of large capitalization securities. In addition, due to thin trading in some such securities, an investment in these securities may be more illiquid (*i.e.*, harder to sell) than that of larger capitalization securities. Smaller capitalization companies also fail more often than larger companies and may have more limited management and financial resources than larger companies.

Tax-Managed Investment Risk: The performance of the Fund may deviate from that of non-tax managed funds and may not provide as high a return before consideration of federal income tax consequences as non-tax managed funds. The Fund’s tax-sensitive investment strategy involves active management with the intent of minimizing the amount of realized gains from the sale of securities; however, market conditions may limit the Fund’s ability to execute such strategy. The Fund’s ability to utilize various tax-management techniques may be curtailed or eliminated in the future by tax legislation or regulation. Although the Fund expects that a smaller portion of its *total return* will consist of taxable distributions to shareholders as compared to non-tax managed funds, there can be no assurance about the size of taxable distributions to shareholders.

Value Style Risk: Investing in or having exposure to “value” securities presents the risk that the securities may never reach what the *Adviser* believes are their full market values, either because the market fails to recognize what the *Adviser* considers to be the security’s true value or because the *Adviser* misjudged that value. In addition, there may be periods during which the investment performance of the Fund while using a value strategy may suffer.

Performance Information

The performance information below shows summary performance information for the Fund in a bar chart and an average annual *total returns* table. The information shows you how the Fund’s performance has varied year by year and provides some indication of the risks of investing in the Fund.

The Fund’s past performance (before and after taxes), as provided by the bar chart and performance table that follows, is not an indication of future results. Updated information on the Fund’s performance, including its current NAV per share, can be obtained by visiting <https://funds.aqr.com>.

Class I Shares—Total Returns

The bar chart below provides an illustration of how the Fund’s performance has varied in each of the indicated calendar years.

Highest Quarterly Return

9.67% (4Q16)

Lowest Quarterly Return

0.43% (1Q16)

Average Annual Total Returns as of December 31, 2017

The following table compares the Fund's average annual *total returns* for Class I Shares and Class N Shares as of December 31, 2017 to the *Russell 2000*[®] *Index*. You cannot invest directly in an index. The table includes all applicable fees and sales charges.

	One Year	Since Inception (February 11, 2015)
AQR TM Small Cap Multi-Style Fund—Class I		
Return Before Taxes	9.41%	7.88%
Return After Taxes on Distributions	8.72%	7.49%
Return After Taxes on Distributions and Sale of Fund Shares	5.90%	6.07%
AQR TM Small Cap Multi-Style Fund—Class N		
Return Before Taxes	9.17%	7.61%
<i>Russell 2000</i> [®] <i>Index</i> (reflects no deductions for fees, expenses or taxes)	14.65%	10.43%

After-tax returns are calculated using the historical highest individual marginal tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns are not relevant to investors who hold their Fund shares through tax-deferred arrangements such as 401(k) plans or individual retirement accounts. After-tax returns are for Class I Shares only. After-tax returns for other classes will vary.

Investment Manager

The Fund's investment manager is AQR Capital Management, LLC.

AQR TM International Multi-Style Fund

Fund Summary — January 29, 2018

Investment Objective

The AQR TM International Multi-Style Fund (the “Fund”) seeks long-term after-tax capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

	Class I	Class N
Management Fee	0.45%	0.45%
Distribution (12b-1) Fee	None	0.25%
Other Expenses	0.26%	0.27%
Total Annual Fund Operating Expenses	0.71%	0.97%
Less: Fee Waivers and/or Expense Reimbursements ¹	0.11%	0.12%
Total Annual Fund Operating Expenses after Fee Waivers and/or Expense Reimbursements	0.60%	0.85%

¹ The *Adviser* has contractually agreed to waive its management fee and/or to reimburse expenses of the Fund to the extent necessary to maintain the total annual fund operating expenses (excluding interest, taxes, dividends on short sales, borrowing costs, acquired fund fees and expenses, interest expense relating to short sales, expenses related to class action claims and extraordinary expenses) at no more than 0.60% for Class I Shares and 0.85% for Class N Shares (the “Fee Waiver Agreement”). This arrangement will continue at least through January 28, 2019. The Fee Waiver Agreement may only be terminated with the consent of the *Board of Trustees*, including a majority of the Trustees of the *Trust* who are not “interested persons” of the *Trust* within the meaning of the *1940 Act*. The *Adviser* is entitled to recapture the fees waived and/or expenses reimbursed, only to the extent that the recapture can be made during the thirty-six months following the end of the month during which the *Adviser* waived fees or reimbursed expenses. In no case will the *Adviser* recapture any amount that would cause the aggregate operating expenses of the Fund attributable to a share class during a year in which a repayment is made to exceed the lesser of (i) the applicable limits in effect at the time of the waiver and/or reimbursement, or (ii) the applicable limits in effect at the time of recapture.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other *mutual funds*. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same and takes into account the effect of the Fee Waiver Agreement through January 28, 2019, as discussed in Footnote No. 1 to the Fee Table. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class I Shares	\$61	\$216	\$384	\$ 872
Class N Shares	\$87	\$297	\$525	\$1,179

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. During the fiscal year ended September 30, 2017, the Fund’s portfolio turnover rate was 52% of the average value of its portfolio.

Principal Investment Strategies of the Fund

The Fund pursues its investment objective by investing primarily in equity or equity-related securities (including, but not limited to, exchange-traded funds, equity index futures, equity index swaps and depositary receipts) of non-U.S. companies. The “TM” in the Fund’s name reflects that the Fund employs a “tax management” strategy which considers the potential impact of federal income tax on shareholders’ investment return.

The Fund combines multiple investment styles, primarily including value, *momentum* and quality, using an integrated approach. In managing the Fund, the *Adviser* seeks to invest in attractively valued companies with positive *momentum* and a stable business. Companies are considered to be good value investments if they appear cheap based on multiple fundamental measures, including price-to-book and price-to-earnings ratios relative to other securities in its relevant

universe at the time of purchase. In assessing positive *momentum*, the *Adviser* favors securities with strong medium-term performance relative to other securities in its relevant universe at the time of purchase. Further, the *Adviser* favors stable companies in good business health, including those with strong profitability and stable earnings. The *Adviser* may add to or modify the economic factors employed in selecting securities. There is no guarantee that the Fund's objective will be met.

The Fund will generally invest in developed markets outside of the U.S. As of the date of this prospectus, the *Adviser* considers developed markets outside of the U.S. to be those countries that are included in the *MSCI World ex-U.S. Index* at the time of purchase.

The Fund generally invests in large-cap companies, which the *Adviser* generally considers to be those companies with market capitalizations within the range of the *MSCI World ex-U.S. Index* at the time of purchase. Although the Fund does not limit its investments to any one country, the Fund may invest in any one country without limit.

The *Adviser* determines the weight of each security in the portfolio using a combination of its assessment of the liquidity of the security, the attractiveness of the security based on each factor described above and additional criteria that form part of the *Adviser's* security selection process. The *Adviser* utilizes portfolio optimization techniques to determine trading activity, taking into account the transaction costs and adverse tax consequences associated with trading each equity instrument.

When selecting securities for the portfolio, the *Adviser* also employs a tax management strategy which considers the potential impact of federal income tax on shareholders' investment return. This tax management strategy is generally designed so investors receive lower distributions of realized capital gains than funds that do not take tax consequences into account. Investors should not expect that there will be no capital gain distributions, however, as the Fund will balance investment considerations with tax consequences in making investment decisions. The techniques and strategies that may be used to attempt to reduce the impact of federal income tax on shareholders' investment returns include:

- when believed by the *Adviser* to be appropriate, selling stocks to realize losses, with the specific purpose of offsetting gains;
- deferring realizations of net capital gains;
- limiting portfolio turnover that may result in taxable gains; and
- choosing a tax accounting method that reduces tax liability: for example, using the highest-in, first-out (HIFO) method which sells tax lots of securities that have a higher tax basis before selling tax lots of securities that have a lower tax basis.

The Fund invests significantly in common stocks. The Fund may also invest in or use financial futures contracts, forward foreign currency contracts and other types of equity-linked derivative instruments such as equity swaps and equity index swaps, as well as exchange-traded funds and similar pooled investment vehicles, for hedging purposes, to gain exposure to the equity market and to maintain liquidity to pay for redemptions. A portion of the Fund's assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

To attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

Principal Risks of Investing in the Fund

Risk is inherent in all investing. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly from day to day and over time. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. ***The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.*** The following is a summary description of certain risks of investing in the Fund.

Common Stock Risk: The Fund may invest in, or have exposure to, common stocks. Common stocks are subject to greater fluctuations in market value than certain other asset classes as a result of such factors as a company's business performance, investor perceptions, stock market trends and general economic conditions.

Counterparty Risk: The Fund may enter into various types of derivative contracts. Many of these derivative contracts will be privately negotiated in the over-the-counter market. These contracts also involve exposure to credit risk, since contract performance depends in part on the financial condition of the counterparty. If a privately negotiated over-the-counter contract calls for payments by the Fund, the Fund must be prepared to make such payments when due. In

addition, if a counterparty's creditworthiness declines, the Fund may not receive payments owed under the contract, or such payments may be delayed under such circumstances and the value of agreements with such counterparty can be expected to decline, potentially resulting in losses to the Fund.

Currency Risk: Currency risk is the risk that changes in currency exchange rates will negatively affect securities denominated in, and/or receiving revenues in, foreign currencies. The liquidity and trading value of foreign currencies could be affected by global economic factors, such as inflation, interest rate levels, and trade balances among countries, as well as the actions of sovereign governments and central banks. Adverse changes in currency exchange rates (relative to the U.S. dollar) may erode or reverse any potential gains from the Fund's investments in securities denominated in a foreign currency or may widen existing losses.

Derivatives Risk: In general, a derivative instrument typically involves leverage, *i.e.*, it provides exposure to potential gain or loss from a change in the level of the market price of the underlying security, currency or commodity (or a basket or index) in a notional amount that exceeds the amount of cash or assets required to establish or maintain the derivative instrument. Adverse changes in the value or level of the underlying asset or index, which the Fund may not directly own, can result in a loss to the Fund substantially greater than the amount invested in the derivative itself. The use of derivative instruments also exposes the Fund to additional risks and transaction costs. These instruments come in many varieties and have a wide range of potential risks and rewards, and may include, as further described in the section entitled "Principal Investment Strategies of the Fund," futures contracts, swaps and forward foreign currency contracts. A risk of the Fund's use of derivatives is that the fluctuations in their values may not correlate perfectly with the overall securities markets. Additionally, to the extent the Fund is required to segregate or "set aside" (often referred to as "asset segregation") liquid assets or otherwise cover open positions with respect to certain derivative instruments, the Fund may be required to sell portfolio instruments to meet these asset segregation requirements. There is a possibility that segregation involving a large percentage of the Fund's assets could impede portfolio management or the Fund's ability to meet redemption requests or other current obligations.

Foreign Investments Risk: Foreign investments often involve special risks not present in U.S. investments that can increase the chances that the Fund will lose money. These risks include:

- The Fund generally holds its foreign instruments and cash in foreign banks and securities depositories, which may be recently organized or new to the foreign custody business and may be subject to only limited or no regulatory oversight.
- Changes in foreign currency exchange rates can affect the value of the Fund's portfolio.
- The economies of certain foreign markets may not compare favorably with the economy of the United States with respect to such issues as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- The governments of certain countries may prohibit or impose substantial restrictions on foreign investments in their capital markets or in certain industries.
- Many foreign governments do not supervise and regulate stock exchanges, brokers and the sale of securities to the same extent as does the United States and may not have laws to protect investors that are comparable to U.S. securities laws.
- Settlement and clearance procedures in certain foreign markets may result in delays in payment for or delivery of securities not typically associated with settlement and clearance of U.S. investments.

Forward and Futures Contract Risk: The successful use of forward and futures contracts draws upon the *Adviser's* skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of forward and futures contracts, which may adversely affect the Fund's *NAV* and *total return*, are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the *Adviser's* inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

High Portfolio Turnover Risk: The investment techniques and strategies utilized by the Fund, including investments made on a shorter-term basis or in derivative instruments or instruments with a maturity of one year or less at the time of acquisition, may result in frequent portfolio trading and high portfolio turnover. High portfolio turnover rates will cause the Fund to incur higher levels of brokerage fees and commissions, which may reduce performance, and may cause higher levels of current tax liability to shareholders in the Fund.

Investment in Other Investment Companies Risk: As with other investments, investments in other investment companies, including exchange-traded funds (“ETFs”), are subject to market and manager risk. In addition, if the Fund acquires shares of investment companies, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies. The Fund may invest in money market *mutual funds*. An investment in a money market *mutual fund* is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Although money market *mutual funds* that invest in U.S. government securities seek to preserve the value of the Fund’s investment at \$1.00 per share, it is possible to lose money by investing in a stable NAV money market *mutual fund*. Moreover, recent SEC rule amendments require prime money market *mutual funds* to use floating NAVs that do not preserve the value of the Fund’s investment at \$1.00 per share. These rule amendments may impact the Fund’s use of prime money market *mutual funds* for capital preservation purposes.

Manager Risk: If the *Adviser* makes poor investment decisions, it will negatively affect the Fund’s investment performance.

Market Risk: Market risk is the risk that the markets on which the Fund’s investments trade will increase or decrease in value. Prices may fluctuate widely over short or extended periods in response to company, market or economic news. Markets also tend to move in cycles, with periods of rising and falling prices. If there is a general decline in the securities and other markets, your investment in the Fund may lose value, regardless of the individual results of the securities and other instruments in which the Fund invests.

Model and Data Risk: Given the complexity of the investments and strategies of the Fund, the *Adviser* relies heavily on quantitative models and information and data supplied by third parties (“Models and Data”). Models and Data are used to construct sets of transactions and investments, to provide risk management insights, and to assist in hedging the Fund’s investments.

When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon expose the Fund to potential risks. Similarly, any hedging based on faulty Models and Data may prove to be unsuccessful. Some of the models used by the *Adviser* for the Fund are predictive in nature. The use of predictive models has inherent risks. Because predictive models are usually constructed based on historical data supplied by third parties, the success of relying on such models may depend heavily on the accuracy and reliability of the supplied historical data. The Fund bears the risk that the quantitative models used by the *Adviser* will not be successful in selecting companies for investment or in determining the weighting of investment positions that will enable the Fund to achieve its investment objective.

All models rely on correct market data inputs. If incorrect market data is entered into even a well-founded model, the resulting information will be incorrect. However, even if market data is input correctly, “model prices” will often differ substantially from market prices, especially for instruments with complex characteristics, such as derivative instruments.

Momentum Style Risk: Investing in or having exposure to securities with positive *momentum* entails investing in securities that have had above-average recent returns. These securities may be more volatile than a broad cross-section of securities. In addition, there may be periods during which the investment performance of the Fund while using a *momentum* strategy may suffer.

Securities Lending Risk: The Fund’s risk in lending portfolio securities, as with other extensions of credit, consists of the possibility of loss to the Fund due to (i) the inability of the borrower to return the securities, (ii) a delay in receiving additional collateral to adequately cover any fluctuations in the value of securities on loan, (iii) a delay in recovery of the securities, or (iv) the loss of rights in the collateral should the borrower fail financially. In addition, the Fund is responsible for any loss that might result from its investment of the borrower’s collateral.

Tax-Managed Investment Risk: The performance of the Fund may deviate from that of non-tax managed funds and may not provide as high a return before consideration of federal income tax consequences as non-tax managed funds. The Fund’s tax-sensitive investment strategy involves active management with the intent of minimizing the amount of realized gains from the sale of securities; however, market conditions may limit the Fund’s ability to execute such strategy. The Fund’s ability to utilize various tax-management techniques may be curtailed or eliminated in the future by tax legislation or regulation. Although the Fund expects that a smaller portion of its *total return* will consist of taxable distributions to shareholders as compared to non-tax managed funds, there can be no assurance about the size of taxable distributions to shareholders.

Value Style Risk: Investing in or having exposure to “value” securities presents the risk that the securities may never reach what the *Adviser* believes are their full market values, either because the market fails to recognize what the *Adviser* considers to be the security’s true value or because the *Adviser* misjudged that value. In addition, there may be periods during which the investment performance of the Fund while using a value strategy may suffer.

Performance Information

The performance information below shows summary performance information for the Fund in a bar chart and an average annual *total returns* table. The information shows you how the Fund's performance has varied year by year and provides some indication of the risks of investing in the Fund.

The Fund's past performance (before and after taxes), as provided by the bar chart and performance table that follows, is not an indication of future results. Updated information on the Fund's performance, including its current NAV per share, can be obtained by visiting <https://funds.aqr.com>.

Class I Shares—Total Returns

The bar chart below provides an illustration of how the Fund's performance has varied in each of the indicated calendar years.

Highest Quarterly Return

7.93% (1Q17)

Lowest Quarterly Return

-4.96% (1Q16)

Average Annual Total Returns as of December 31, 2017

The following table compares the Fund's average annual *total returns* for Class I Shares and Class N Shares as of December 31, 2017 to the *MSCI World ex-USA Index*. You cannot invest directly in an index. The table includes all applicable fees and sales charges.

	One Year	Since Inception (February 11, 2015)
AQR TM International Multi-Style Fund—Class I		
Return Before Taxes	25.52%	6.38%
Return After Taxes on Distributions	24.99%	6.00%
Return After Taxes on Distributions and Sale of Fund Shares	15.18%	5.00%
AQR TM International Multi-Style Fund—Class N		
Return Before Taxes	25.30%	6.13%
<i>MSCI World ex-USA Index</i> (reflects no deductions for fees, expenses or taxes)	24.21%	7.37%

After-tax returns are calculated using the historical highest individual marginal tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns are not relevant to investors who hold their Fund shares through tax-deferred arrangements such as 401(k) plans or individual retirement accounts. After-tax returns are for Class I Shares only. After-tax returns for other classes will vary.

Investment Manager

AQR TM Emerging Multi-Style Fund

Fund Summary – January 29, 2018

Investment Objective

The AQR TM Emerging Multi-Style Fund (the “Fund”) seeks long-term after-tax capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

	Class I	Class N
Management Fee	0.60%	0.60%
Distribution (12b-1) Fee	None	0.25%
Other Expenses	0.26%	0.27%
Total Annual Fund Operating Expenses	0.86%	1.12%
Less: Fee Waivers and/or Expense Reimbursements ¹	0.11%	0.12%
Total Annual Fund Operating Expenses after Fee Waivers and/or Expense Reimbursements	0.75%	1.00%

¹ The *Adviser* has contractually agreed to waive its management fee and/or to reimburse expenses of the Fund to the extent necessary to maintain the total annual fund operating expenses (excluding interest, taxes, dividends on short sales, borrowing costs, acquired fund fees and expenses, interest expense relating to short sales, expenses related to class action claims and extraordinary expenses) at no more than 0.75% for Class I Shares and 1.00% for Class N Shares (the “Fee Waiver Agreement”). This arrangement will continue at least through January 28, 2019. The Fee Waiver Agreement may only be terminated with the consent of the *Board of Trustees*, including a majority of the Trustees of the *Trust* who are not “interested persons” of the *Trust* within the meaning of the *1940 Act*. The *Adviser* is entitled to recapture the fees waived and/or expenses reimbursed, only to the extent that the recapture can be made during the thirty-six months following the end of the month during which the *Adviser* waived fees or reimbursed expenses. In no case will the *Adviser* recapture any amount that would cause the aggregate operating expenses of the Fund attributable to a share class during a year in which a repayment is made to exceed the lesser of (i) the applicable limits in effect at the time of the waiver and/or reimbursement, or (ii) the applicable limits in effect at the time of recapture.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other *mutual funds*. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same and takes into account the effect of the Fee Waiver Agreement through January 28, 2019, as discussed in Footnote No. 1 to the Fee Table. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class I Shares	\$ 77	\$263	\$466	\$1,051
Class N Shares	\$102	\$344	\$605	\$1,352

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. During the fiscal year ended September 30, 2017, the Fund’s portfolio turnover rate was 51% of the average value of its portfolio.

Principal Investment Strategies of the Fund

The Fund pursues its investment objective by investing, under normal market conditions, at least 80% of its net assets (including borrowings for investment purposes) in equity or equity-related instruments (including, but not limited to, exchange-traded funds, equity index futures, equity index swaps and depositary receipts) of emerging market companies. The “TM” in the Fund’s name reflects that the Fund employs a “tax management” strategy which considers the potential impact of federal income tax on shareholders’ investment return.

The Fund combines multiple investment styles, primarily including value, *momentum* and quality, using an integrated approach. In managing the Fund, the *Adviser* seeks to invest in attractively valued companies with positive *momentum* and a stable business. Companies are considered to be good value investments if they appear cheap based on multiple fundamental measures, including price-to-book and price-to-earnings ratios relative to other securities in its relevant

universe at the time of purchase. In assessing positive *momentum*, the *Adviser* favors securities with strong medium-term performance relative to other securities in its relevant universe at the time of purchase. Further, the *Adviser* favors stable companies in good business health, including those with strong profitability and stable earnings. The *Adviser* may add to or modify the economic factors employed in selecting securities. There is no guarantee that the Fund's objective will be met.

A company will be considered to be an emerging market company if it is organized, domiciled, or has a principal place of business in an emerging market. Emerging markets include countries that are included in the *MSCI Emerging Markets Index* at the time of purchase. Equity-related instruments include instruments that provide exposure to the change in value of an emerging market company. The Fund may also invest in, and have exposure to, non-emerging market companies if the *Adviser* considers it advisable to achieve the Fund's investment objective.

The Fund generally invests in large- and mid-cap companies, which the *Adviser* generally considers to be those companies with market capitalizations within the range of the *MSCI Emerging Markets Index* at the time of purchase. Although the Fund does not limit its investments to any one country, the Fund may invest in any one country without limit.

The *Adviser* determines the weight of each security in the portfolio using a combination of its assessment of the liquidity of the security, the attractiveness of the security based on each factor described above and additional criteria that form part of the *Adviser's* security selection process. The *Adviser* utilizes portfolio optimization techniques to determine trading activity, taking into account the transaction costs and adverse tax consequences associated with trading each equity instrument.

When selecting securities for the portfolio, the *Adviser* also employs a tax management strategy which considers the potential impact of federal income tax on shareholders' investment return. This tax management strategy is generally designed so investors receive lower distributions of realized capital gains than funds that do not take tax consequences into account. Investors should not expect that there will be no capital gain distributions, however, as the Fund will balance investment considerations with tax consequences in making investment decisions. The techniques and strategies that may be used to attempt to reduce the impact of federal income tax on shareholders' investment returns include:

- when believed by the *Adviser* to be appropriate, selling stocks to realize losses, with the specific purpose of offsetting gains;
- deferring realizations of net capital gains;
- limiting portfolio turnover that may result in taxable gains; and
- choosing a tax accounting method that reduces tax liability: for example, using the highest-in, first-out (HIFO) method which sells tax lots of securities that have a higher tax basis before selling tax lots of securities that have a lower tax basis.

The Fund invests significantly in common stocks. The Fund may also invest in or use financial futures contracts, forward foreign currency contracts and other types of equity-linked derivative instruments such as equity swaps and equity index swaps, as well as exchange-traded-funds and similar pooled investment vehicles, for hedging purposes, to gain exposure to the equity market and to maintain liquidity to pay for redemptions. A portion of the Fund's assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

To attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

Principal Risks of Investing in the Fund

Risk is inherent in all investing. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly from day to day and over time. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. ***The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.*** The following is a summary description of certain risks of investing in the Fund.

Common Stock Risk: The Fund may invest in, or have exposure to, common stocks. Common stocks are subject to greater fluctuations in market value than certain other asset classes as a result of such factors as a company's business performance, investor perceptions, stock market trends and general economic conditions.

Counterparty Risk: The Fund may enter into various types of derivative contracts. Many of these derivative contracts will be privately negotiated in the over-the-counter market. These contracts also involve exposure to credit risk, since contract performance depends in part on the financial condition of the counterparty. If a privately negotiated over-the-counter contract calls for payments by the Fund, the Fund must be prepared to make such payments when due. In addition, if a counterparty's creditworthiness declines, the Fund may not receive payments owed under the contract, or such payments may be delayed under such circumstances and the value of agreements with such counterparty can be expected to decline, potentially resulting in losses to the Fund.

Currency Risk: Currency risk is the risk that changes in currency exchange rates will negatively affect securities denominated in, and/or receiving revenues in, foreign currencies. The liquidity and trading value of foreign currencies could be affected by global economic factors, such as inflation, interest rate levels, and trade balances among countries, as well as the actions of sovereign governments and central banks. Adverse changes in currency exchange rates (relative to the U.S. dollar) may erode or reverse any potential gains from the Fund's investments in securities denominated in a foreign currency or may widen existing losses.

Derivatives Risk: In general, a derivative instrument typically involves leverage, *i.e.*, it provides exposure to potential gain or loss from a change in the level of the market price of the underlying security, currency or commodity (or a basket or index) in a notional amount that exceeds the amount of cash or assets required to establish or maintain the derivative instrument. Adverse changes in the value or level of the underlying asset or index, which the Fund may not directly own, can result in a loss to the Fund substantially greater than the amount invested in the derivative itself. The use of derivative instruments also exposes the Fund to additional risks and transaction costs. These instruments come in many varieties and have a wide range of potential risks and rewards, and may include, as further described in the section entitled "Principal Investment Strategies of the Fund," futures contracts, forward foreign currency contracts and swaps. A risk of the Fund's use of derivatives is that the fluctuations in their values may not correlate perfectly with the overall securities markets. Additionally, to the extent the Fund is required to segregate or "set aside" (often referred to as "asset segregation") liquid assets or otherwise cover open positions with respect to certain derivative instruments, the Fund may be required to sell portfolio instruments to meet these asset segregation requirements. There is a possibility that segregation involving a large percentage of the Fund's assets could impede portfolio management or the Fund's ability to meet redemption requests or other current obligations.

Emerging Market Risk: The Fund intends to have exposure to emerging markets. Emerging markets are riskier than more developed markets because they tend to develop unevenly and may never fully develop. Investments in emerging markets may be considered speculative. Emerging markets are more likely to experience hyperinflation and currency devaluations, which adversely affect returns to U.S. investors. In addition, many emerging securities markets have far lower trading volumes and less liquidity than developed markets.

Foreign Investments Risk: Foreign investments often involve special risks not present in U.S. investments that can increase the chances that the Fund will lose money. These risks include:

- The Fund generally holds its foreign instruments and cash in foreign banks and securities depositories, which may be recently organized or new to the foreign custody business and may be subject to only limited or no regulatory oversight.
- Changes in foreign currency exchange rates can affect the value of the Fund's portfolio.
- The economies of certain foreign markets may not compare favorably with the economy of the United States with respect to such issues as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- The governments of certain countries may prohibit or impose substantial restrictions on foreign investments in their capital markets or in certain industries.
- Many foreign governments do not supervise and regulate stock exchanges, brokers and the sale of securities to the same extent as does the United States and may not have laws to protect investors that are comparable to U.S. securities laws.
- Settlement and clearance procedures in certain foreign markets may result in delays in payment for or delivery of securities not typically associated with settlement and clearance of U.S. investments.

Forward and Futures Contract Risk: The successful use of forward and futures contracts draws upon the *Adviser's* skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of forward and futures contracts, which may adversely affect the Fund's *NAV* and *total return*, are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the *Adviser's* inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty will

default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

High Portfolio Turnover Risk: The investment techniques and strategies utilized by the Fund, including investments made on a shorter-term basis or in derivative instruments or instruments with a maturity of one year or less at the time of acquisition, may result in frequent portfolio trading and high portfolio turnover. High portfolio turnover rates will cause the Fund to incur higher levels of brokerage fees and commissions, which may reduce performance, and may cause higher levels of current tax liability to shareholders in the Fund.

Investment in Other Investment Companies Risk: As with other investments, investments in other investment companies, including exchange-traded funds (“ETFs”), are subject to market and manager risk. In addition, if the Fund acquires shares of investment companies, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies. The Fund may invest in money market *mutual funds*. An investment in a money market *mutual fund* is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Although money market *mutual funds* that invest in U.S. government securities seek to preserve the value of the Fund’s investment at \$1.00 per share, it is possible to lose money by investing in a stable NAV money market *mutual fund*. Moreover, recent SEC rule amendments require prime money market *mutual funds* to use floating NAVs that do not preserve the value of the Fund’s investment at \$1.00 per share. These rule amendments may impact the Fund’s use of prime money market *mutual funds* for capital preservation purposes.

Manager Risk: If the *Adviser* makes poor investment decisions, it will negatively affect the Fund’s investment performance.

Market Risk: Market risk is the risk that the markets on which the Fund’s investments trade will increase or decrease in value. Prices may fluctuate widely over short or extended periods in response to company, market or economic news. Markets also tend to move in cycles, with periods of rising and falling prices. If there is a general decline in the securities and other markets, your investment in the Fund may lose value, regardless of the individual results of the securities and other instruments in which the Fund invests.

Mid-Cap Securities Risk: The Fund may invest in, or have exposure to, the securities of mid-cap companies. The prices of securities of mid-cap companies generally are more volatile than those of large capitalization companies and are more likely to be adversely affected than large-cap companies by changes in earnings results and investor expectations or poor economic or market conditions, including those experienced during a recession.

Model and Data Risk: Given the complexity of the investments and strategies of the Fund, the *Adviser* relies heavily on quantitative models and information and data supplied by third parties (“Models and Data”). Models and Data are used to construct sets of transactions and investments, to provide risk management insights, and to assist in hedging the Fund’s investments.

When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon expose the Fund to potential risks. Similarly, any hedging based on faulty Models and Data may prove to be unsuccessful. Some of the models used by the *Adviser* for the Fund are predictive in nature. The use of predictive models has inherent risks. Because predictive models are usually constructed based on historical data supplied by third parties, the success of relying on such models may depend heavily on the accuracy and reliability of the supplied historical data. The Fund bears the risk that the quantitative models used by the *Adviser* will not be successful in selecting companies for investment or in determining the weighting of investment positions that will enable the Fund to achieve its investment objective.

All models rely on correct market data inputs. If incorrect market data is entered into even a well-founded model, the resulting information will be incorrect. However, even if market data is input correctly, “model prices” will often differ substantially from market prices, especially for instruments with complex characteristics, such as derivative instruments.

Momentum Style Risk: Investing in or having exposure to securities with positive *momentum* entails investing in securities that have had above-average recent returns. These securities may be more volatile than a broad cross-section of securities. In addition, there may be periods during which the investment performance of the Fund while using a *momentum* strategy may suffer.

Securities Lending Risk: The Fund’s risk in lending portfolio securities, as with other extensions of credit, consists of the possibility of loss to the Fund due to (i) the inability of the borrower to return the securities, (ii) a delay in receiving additional collateral to adequately cover any fluctuations in the value of securities on loan, (iii) a delay in recovery of the securities, or (iv) the loss of rights in the collateral should the borrower fail financially. In addition, the Fund is responsible for any loss that might result from its investment of the borrower’s collateral.

Tax-Managed Investment Risk: The performance of the Fund may deviate from that of non-tax managed funds and may not provide as high a return before consideration of federal income tax consequences as non-tax managed funds. The Fund's tax-sensitive investment strategy involves active management with the intent of minimizing the amount of realized gains from the sale of securities; however, market conditions may limit the Fund's ability to execute such strategy. The Fund's ability to utilize various tax-management techniques may be curtailed or eliminated in the future by tax legislation or regulation. Although the Fund expects that a smaller portion of its *total return* will consist of taxable distributions to shareholders as compared to non-tax managed funds, there can be no assurance about the size of taxable distributions to shareholders.

Value Style Risk: Investing in or having exposure to "value" securities presents the risk that the securities may never reach what the *Adviser* believes are their full market values, either because the market fails to recognize what the *Adviser* considers to be the security's true value or because the *Adviser* misjudged that value. In addition, there may be periods during which the investment performance of the Fund while using a value strategy may suffer.

Performance Information

The performance information below shows summary performance information for the Fund in a bar chart and an average annual *total returns* table. The information shows you how the Fund's performance has varied year by year and provides some indication of the risks of investing in the Fund.

The Fund's past performance (before and after taxes), as provided by the bar chart and performance table that follows, is not an indication of future results. Updated information on the Fund's performance, including its current NAV per share, can be obtained by visiting <https://funds.aqr.com>.

Class I Shares—Total Returns

The bar chart below provides an illustration of how the Fund's performance has varied in each of the indicated calendar years.

Highest Quarterly Return

12.65% (1Q17)

Lowest Quarterly Return

-5.65% (4Q16)

Average Annual Total Returns as of December 31, 2017

The following table compares the Fund's average annual *total returns* for Class I Shares and Class N Shares as of December 31, 2017 to the *MSCI Emerging Markets Index*. You cannot invest directly in an index. The table includes all applicable fees and sales charges.

	One Year	Since Inception (February 11, 2015)
AQR TM Emerging Multi-Style Fund—Class I		
Return Before Taxes	37.15%	6.70%
Return After Taxes on Distributions	36.86%	6.34%
Return After Taxes on Distributions and Sale of Fund Shares	21.65%	5.15%
AQR TM Emerging Multi-Style Fund—Class N		
Return Before Taxes	36.70%	6.45%
<i>MSCI Emerging Markets Index</i> (reflects no deductions for fees, expenses or taxes)	37.28%	9.23%

After-tax returns are calculated using the historical highest individual marginal tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns are not relevant to investors who hold their Fund shares through tax-deferred arrangements such as 401(k) plans or individual retirement accounts. After-tax returns are for Class I Shares only. After-tax returns for other classes will vary.

Investment Manager

The Fund's investment manager is AQR Capital Management, LLC.

Portfolio Managers

Name	Portfolio Manager of the Fund Since	Title
Clifford S. Asness, Ph.D., M.B.A.	February 11, 2015	Managing and Founding Principal of the <i>Adviser</i>
Andrea Frazzini, Ph.D., M.S.	February 11, 2015	Principal of the <i>Adviser</i>

AQR Large Cap Momentum Style Fund

Fund Summary – January 29, 2018

Investment Objective

The AQR Large Cap Momentum Style Fund (the “Fund”) seeks long-term capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

	Class I	Class N
Management Fee	0.25%	0.25%
Distribution (12b-1) Fee	None	0.25%
Other Expenses	0.16%	0.16%
Total Annual Fund Operating Expenses	0.41%	0.66%
Less: Fee Waivers and/or Expense Reimbursements ¹	0.01%	0.01%
Total Annual Fund Operating Expenses after Fee Waivers and/or Expense Reimbursements	0.40%	0.65%

¹ The *Adviser* has contractually agreed to waive its management fee and/or to reimburse expenses of the Fund to the extent necessary to maintain the total annual fund operating expenses (excluding interest, taxes, dividends on short sales, borrowing costs, acquired fund fees and expenses, interest expense relating to short sales, expenses related to class action claims and extraordinary expenses) at no more than 0.40% for Class I Shares and 0.65% for Class N Shares (the “Fee Waiver Agreement”). This arrangement will continue at least through January 28, 2019. The Fee Waiver Agreement may only be terminated with the consent of the *Board of Trustees*, including a majority of the Trustees of the *Trust* who are not “interested persons” of the *Trust* within the meaning of the *1940 Act*. The *Adviser* is entitled to recapture the fees waived and/or expenses reimbursed, only to the extent that the recapture can be made during the thirty-six months following the end of the month during which the *Adviser* waived fees or reimbursed expenses. In no case will the *Adviser* recapture any amount that would cause the aggregate operating expenses of the Fund attributable to a share class during a year in which a repayment is made to exceed the lesser of (i) the applicable limits in effect at the time of the waiver and/or reimbursement, or (ii) the applicable limits in effect at the time of recapture.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other *mutual funds*. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same and takes into account the effect of the Fee Waiver Agreement through January 28, 2019, as discussed in Footnote No. 1 to the Fee Table. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class I Shares	\$41	\$131	\$229	\$517
Class N Shares	\$66	\$210	\$367	\$822

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. During the fiscal year ended September 30, 2017, the Fund’s portfolio turnover rate was 88% of the average value of its portfolio.

Principal Investment Strategies of the Fund

The Fund pursues a *momentum* investment style by investing primarily in equity or equity-related securities (including, but not limited to, exchange-traded funds, equity index futures, and depositary receipts) of large-cap companies traded on a principal U.S. exchange or over-the-counter market that the *Adviser* determines to have positive *momentum*. The *Adviser* considers a security to have positive *momentum* primarily if it has outperformed other securities on a relative basis over a recent time period. Relative performance may be based on price *momentum*, earnings *momentum*, or other types of *momentum*, and will generally be measured over time periods ranging from one to twelve months. The criteria the *Adviser* uses for determining positive *momentum* may change from time to time.

Under normal market circumstances, the Fund will invest at least 80% of its net assets (including any borrowings for investment purposes) in large-cap U.S. companies. As of the date of this prospectus, the *Adviser* generally considers large-cap U.S. companies to be those companies with market capitalizations within the range of the *Russell 1000*[®] *Index* at the time of purchase. The Fund may also invest in mid-cap companies.

The *Adviser* determines the weight of each security in the portfolio using a combination of the market capitalization of the security and the *Adviser's* determination of the attractiveness of the security based on the *Adviser's* assessment of the security's *momentum* and additional criteria that form part of the *Adviser's* security selection process.

The *Adviser* believes that effective management of transaction costs is essential. Transaction costs include commissions, bid-ask spreads, market impact and time delays (the time between the investment decision and implementation, during which a market may move in favor of or against the Fund). The *Adviser* will seek to strike a balance between maintaining the desired exposure to positive *momentum* while attempting to keep transaction costs reasonably low.

The Fund invests significantly in common stocks. The Fund may also invest in or use financial futures contracts and other types of equity-linked derivative instruments such as equity swaps and equity index swaps, as well as exchange-traded funds and similar pooled investment vehicles to gain exposure to the equity market and to maintain liquidity to pay for redemptions. A portion of the Fund's assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

To attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

Principal Risks of Investing in the Fund

Risk is inherent in all investing. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly from day to day and over time. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. ***The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.*** The following is a summary description of certain risks of investing in the Fund.

Common Stock Risk: The Fund may invest in, or have exposure to, common stocks. Common stocks are subject to greater fluctuations in market value than certain other asset classes as a result of such factors as a company's business performance, investor perceptions, stock market trends and general economic conditions.

Counterparty Risk: The Fund may enter into various types of derivative contracts. Many of these derivative contracts will be privately negotiated in the over-the-counter market. These contracts also involve exposure to credit risk, since contract performance depends in part on the financial condition of the counterparty. If a privately negotiated over-the-counter contract calls for payments by the Fund, the Fund must be prepared to make such payments when due. In addition, if a counterparty's creditworthiness declines, the Fund may not receive payments owed under the contract, or such payments may be delayed under such circumstances and the value of agreements with such counterparty can be expected to decline, potentially resulting in losses to the Fund.

Derivatives Risk: In general, a derivative instrument typically involves leverage, *i.e.*, it provides exposure to potential gain or loss from a change in the level of the market price of the underlying security, currency or commodity (or a basket or index) in a notional amount that exceeds the amount of cash or assets required to establish or maintain the derivative instrument. Adverse changes in the value or level of the underlying asset or index, which the Fund may not directly own, can result in a loss to the Fund substantially greater than the amount invested in the derivative itself. The use of derivative instruments also exposes the Fund to additional risks and transaction costs. These instruments come in many varieties and have a wide range of potential risks and rewards, and may include, as further described in the section entitled "Principal Investment Strategies of the Fund," futures contracts and swaps. A risk of the Fund's use of derivatives is that the fluctuations in their values may not correlate perfectly with the overall securities markets. Additionally, to the extent the Fund is required to segregate or "set aside" (often referred to as "asset segregation") liquid assets or otherwise cover open positions with respect to certain derivative instruments, the Fund may be required to sell portfolio instruments to meet these asset segregation requirements. There is a possibility that segregation involving a large percentage of the Fund's assets could impede portfolio management or the Fund's ability to meet redemption requests or other current obligations.

Futures Contract Risk: The successful use of futures contracts draws upon the *Adviser's* skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of futures contracts, which may adversely affect the Fund's *NAV* and *total return*, are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the futures contract; (b) possible lack of a liquid secondary market for a futures contract and the resulting inability to close a futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the *Adviser's* inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

Investment in Other Investment Companies Risk: As with other investments, investments in other investment companies, including exchange-traded funds (“ETFs”), are subject to market and manager risk. In addition, if the Fund acquires shares of investment companies, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies. The Fund may invest in money market *mutual funds*. An investment in a money market *mutual fund* is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Although money market *mutual funds* that invest in U.S. government securities seek to preserve the value of the Fund’s investment at \$1.00 per share, it is possible to lose money by investing in a stable NAV money market *mutual fund*. Moreover, recent SEC rule amendments require prime money market *mutual funds* to use floating NAVs that do not preserve the value of the Fund’s investment at \$1.00 per share. These rule amendments may impact the Fund’s use of prime money market *mutual funds* for capital preservation purposes.

Manager Risk: If the *Adviser* makes poor investment decisions, it will negatively affect the Fund’s investment performance.

Market Risk: Market risk is the risk that the markets on which the Fund’s investments trade will increase or decrease in value. Prices may fluctuate widely over short or extended periods in response to company, market or economic news. Markets also tend to move in cycles, with periods of rising and falling prices. If there is a general decline in the securities and other markets, your investment in the Fund may lose value, regardless of the individual results of the securities and other instruments in which the Fund invests.

Mid-Cap Securities Risk: The Fund may invest in, or have exposure to, the securities of mid-cap companies. The prices of securities of mid-cap companies generally are more volatile than those of large capitalization companies and are more likely to be adversely affected than large-cap companies by changes in earnings results and investor expectations or poor economic or market conditions, including those experienced during a recession.

Model and Data Risk: Given the complexity of the investments and strategies of the Fund, the *Adviser* relies heavily on quantitative models and information and data supplied by third parties (“Models and Data”). Models and Data are used to construct sets of transactions and investments, to provide risk management insights, and to assist in hedging the Fund’s investments.

When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon expose the Fund to potential risks. Similarly, any hedging based on faulty Models and Data may prove to be unsuccessful. Some of the models used by the *Adviser* for the Fund are predictive in nature. The use of predictive models has inherent risks. Because predictive models are usually constructed based on historical data supplied by third parties, the success of relying on such models may depend heavily on the accuracy and reliability of the supplied historical data. The Fund bears the risk that the quantitative models used by the *Adviser* will not be successful in selecting companies for investment or in determining the weighting of investment positions that will enable the Fund to achieve its investment objective.

All models rely on correct market data inputs. If incorrect market data is entered into even a well-founded model, the resulting information will be incorrect. However, even if market data is input correctly, “model prices” will often differ substantially from market prices, especially for instruments with complex characteristics, such as derivative instruments.

Momentum Style Risk: Investing in or having exposure to securities with positive *momentum* entails investing in securities that have had above-average recent returns. These securities may be more volatile than a broad cross-section of securities. In addition, there may be periods during which the investment performance of the Fund while using a *momentum* strategy may suffer.

Securities Lending Risk: The Fund’s risk in lending portfolio securities, as with other extensions of credit, consists of the possibility of loss to the Fund due to (i) the inability of the borrower to return the securities, (ii) a delay in receiving additional collateral to adequately cover any fluctuations in the value of securities on loan, (iii) a delay in recovery of the securities, or (iv) the loss of rights in the collateral should the borrower fail financially. In addition, the Fund is responsible for any loss that might result from its investment of the borrower’s collateral.

Performance Information

The performance information below shows summary performance information for the Fund in a bar chart and an average annual *total returns* table. The information shows you how the Fund’s performance has varied year by year and provides some indication of the risks of investing in the Fund. Effective April 1, 2015, the *Board of Trustees* of the *Trust* approved the reclassification of Class L Shares of the Fund as Class I Shares. Prior to April 1, 2015, the performance for the Class I Shares reflects the performance of the share class when it was classified as the Class L Shares of the Fund.

The Fund’s past performance (before and after taxes), as provided by the bar chart and performance table that follows, is not an indication of future results. Updated information on the Fund’s performance, including its current NAV per share, can be obtained by visiting <https://funds.aqr.com>.

Class I Shares—Total Returns

The bar chart below provides an illustration of how the Fund's performance has varied in each of the indicated calendar years.

Highest Quarterly Return

15.22% (3Q10)

Lowest Quarterly Return

-18.19% (3Q11)

Average Annual Total Returns as of December 31, 2017

The following table compares the Fund's average annual *total returns* for Class I Shares and Class N Shares as of December 31, 2017 to the *Russell 1000® Index*. You cannot invest directly in an index. The table includes all applicable fees and sales charges.

	One Year	Five Year	Since Inception
AQR Large Cap Momentum Style Fund— Class I*			
Return Before Taxes	23.88%	14.65%	15.42%
Return After Taxes on Distributions	21.42%	12.50%	13.94%
Return After Taxes on Distributions and Sale of Fund Shares	15.56%	11.39%	12.57%
<i>Russell 1000® Index</i> (reflects no deductions for fees, expenses or taxes)	21.69%	15.71%	16.48%
AQR Large Cap Momentum Style Fund— Class N*			
Return Before Taxes	23.57%	14.38%	14.30%
<i>Russell 1000® Index</i> (reflects no deductions for fees, expenses or taxes)	21.69%	15.71%	15.55%

* The inception dates for the Class I Shares and Class N Shares were July 9, 2009 and December 17, 2012, respectively.

After-tax returns are calculated using the historical highest individual marginal tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns are not relevant to investors who hold their Fund shares through tax-deferred arrangements such as 401(k) plans or individual retirement accounts. After-tax returns are for Class I Shares only. After-tax returns for other classes will vary.

Investment Manager

AQR Small Cap Momentum Style Fund

Fund Summary – January 29, 2018¹

Investment Objective

The AQR Small Cap Momentum Style Fund (the “Fund”) seeks long-term capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

	Class I	Class N
Management Fee	0.45%	0.45%
Distribution (12b-1) Fee	None	0.25%
Other Expenses	0.19%	0.16%
Total Annual Fund Operating Expenses	0.64%	0.86%
Less: Fee Waivers and/or Expense Reimbursements ¹	0.04%	0.01%
Total Annual Fund Operating Expenses after Fee Waivers and/or Expense Reimbursements	0.60%	0.85%

¹ The *Adviser* has contractually agreed to waive its management fee and/or to reimburse expenses of the Fund to the extent necessary to maintain the total annual fund operating expenses (excluding interest, taxes, dividends on short sales, borrowing costs, acquired fund fees and expenses, interest expense relating to short sales, expenses related to class action claims and extraordinary expenses) at no more than 0.60% for Class I Shares and 0.85% for Class N Shares (the “Fee Waiver Agreement”). This arrangement will continue at least through January 28, 2019. The Fee Waiver Agreement may only be terminated with the consent of the *Board of Trustees*, including a majority of the Trustees of the *Trust* who are not “interested persons” of the *Trust* within the meaning of the *1940 Act*. The *Adviser* is entitled to recapture the fees waived and/or expenses reimbursed, only to the extent that the recapture can be made during the thirty-six months following the end of the month during which the *Adviser* waived fees or reimbursed expenses. In no case will the *Adviser* recapture any amount that would cause the aggregate operating expenses of the Fund attributable to a share class during a year in which a repayment is made to exceed the lesser of (i) the applicable limits in effect at the time of the waiver and/or reimbursement, or (ii) the applicable limits in effect at the time of recapture.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other *mutual funds*. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same and takes into account the effect of the Fee Waiver Agreement through January 28, 2019, as discussed in Footnote No. 1 to the Fee Table. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class I Shares	\$61	\$201	\$353	\$ 795
Class N Shares	\$87	\$273	\$476	\$1,060

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. During the fiscal year ended September 30, 2017, the Fund’s portfolio turnover rate was 86% of the average value of its portfolio.

Principal Investment Strategies of the Fund

The Fund pursues a *momentum* investment style by investing primarily in equity or equity-related securities (including, but not limited to, exchange-traded funds, equity index futures, and depositary receipts) of small-cap companies traded on a principal U.S. exchange or over-the-counter market that the *Adviser* determines to have positive *momentum*. The *Adviser* considers a security to have positive *momentum* primarily if it has outperformed other securities on a relative basis over a recent time period. Relative performance may be based on price *momentum*, earnings *momentum*, or other types of *momentum*, and will generally be measured over time periods ranging from one to twelve months. The criteria the *Adviser* uses for determining positive *momentum* may change from time to time.

Under normal market circumstances, the Fund will invest at least 80% of its net assets (including any borrowings for investment purposes) in small-cap U.S. companies. As of the date of this prospectus, the *Adviser* considers small-cap U.S. companies to be those companies with market capitalizations within the range of the *Russell 2000*[®] *Index* at the time of purchase.

The *Adviser* determines the weight of each security in the portfolio using a combination of the market capitalization of the security and the *Adviser's* determination of the attractiveness of the security based on the *Adviser's* assessment of the security's *momentum* and additional criteria that form part of the *Adviser's* security selection process.

The *Adviser* believes that effective management of transaction costs is essential. Transaction costs include commissions, bid-ask spreads, market impact and time delays (the time between the investment decision and implementation, during which a market may move in favor of or against the Fund). The *Adviser* will seek to strike a balance between maintaining the desired exposure to positive *momentum* while attempting to keep transaction costs reasonably low.

The Fund invests significantly in common stocks. The Fund may also invest in or use financial futures contracts and other types of equity-linked derivative instruments such as equity swaps and equity index swaps, as well as exchange-traded funds and similar pooled investment vehicles to gain exposure to the equity market and to maintain liquidity to pay for redemptions. A portion of the Fund's assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

To attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

Principal Risks of Investing in the Fund

Risk is inherent in all investing. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly from day to day and over time. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. ***The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.*** The following is a summary description of certain risks of investing in the Fund.

Common Stock Risk: The Fund may invest in, or have exposure to, common stocks. Common stocks are subject to greater fluctuations in market value than certain other asset classes as a result of such factors as a company's business performance, investor perceptions, stock market trends and general economic conditions.

Counterparty Risk: The Fund may enter into various types of derivative contracts. Many of these derivative contracts will be privately negotiated in the over-the-counter market. These contracts also involve exposure to credit risk, since contract performance depends in part on the financial condition of the counterparty. If a privately negotiated over-the-counter contract calls for payments by the Fund, the Fund must be prepared to make such payments when due. In addition, if a counterparty's creditworthiness declines, the Fund may not receive payments owed under the contract, or such payments may be delayed under such circumstances and the value of agreements with such counterparty can be expected to decline, potentially resulting in losses to the Fund.

Derivatives Risk: In general, a derivative instrument typically involves leverage, *i.e.*, it provides exposure to potential gain or loss from a change in the level of the market price of the underlying security, currency or commodity (or a basket or index) in a notional amount that exceeds the amount of cash or assets required to establish or maintain the derivative instrument. Adverse changes in the value or level of the underlying asset or index, which the Fund may not directly own, can result in a loss to the Fund substantially greater than the amount invested in the derivative itself. The use of derivative instruments also exposes the Fund to additional risks and transaction costs. These instruments come in many varieties and have a wide range of potential risks and rewards, and may include, as further described in the section entitled "Principal Investment Strategies of the Fund," futures contracts and swaps. A risk of the Fund's use of derivatives is that the fluctuations in their values may not correlate perfectly with the overall securities markets. Additionally, to the extent the Fund is required to segregate or "set aside" (often referred to as "asset segregation") liquid assets or otherwise cover open positions with respect to certain derivative instruments, the Fund may be required to sell portfolio instruments to meet these asset segregation requirements. There is a possibility that segregation involving a large percentage of the Fund's assets could impede portfolio management or the Fund's ability to meet redemption requests or other current obligations.

Futures Contract Risk: The successful use of futures contracts draws upon the *Adviser's* skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of futures contracts, which may adversely affect the Fund's *NAV* and *total return*, are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the futures contract; (b) possible lack of a liquid secondary market for a futures contract and the resulting inability to close a futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the *Adviser's* inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

Investment in Other Investment Companies Risk: As with other investments, investments in other investment companies, including exchange-traded funds (“ETFs”), are subject to market and manager risk. In addition, if the Fund acquires shares of investment companies, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies. The Fund may invest in money market *mutual funds*. An investment in a money market *mutual fund* is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Although money market *mutual funds* that invest in U.S. government securities seek to preserve the value of the Fund’s investment at \$1.00 per share, it is possible to lose money by investing in a stable NAV money market *mutual fund*. Moreover, recent SEC rule amendments require prime money market *mutual funds* to use floating NAVs that do not preserve the value of the Fund’s investment at \$1.00 per share. These rule amendments may impact the Fund’s use of prime money market *mutual funds* for capital preservation purposes.

Manager Risk: If the *Adviser* makes poor investment decisions, it will negatively affect the Fund’s investment performance.

Market Risk: Market risk is the risk that the markets on which the Fund’s investments trade will increase or decrease in value. Prices may fluctuate widely over short or extended periods in response to company, market or economic news. Markets also tend to move in cycles, with periods of rising and falling prices. If there is a general decline in the securities and other markets, your investment in the Fund may lose value, regardless of the individual results of the securities and other instruments in which the Fund invests.

Model and Data Risk: Given the complexity of the investments and strategies of the Fund, the *Adviser* relies heavily on quantitative models and information and data supplied by third parties (“Models and Data”). Models and Data are used to construct sets of transactions and investments, to provide risk management insights, and to assist in hedging the Fund’s investments.

When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon expose the Fund to potential risks. Similarly, any hedging based on faulty Models and Data may prove to be unsuccessful. Some of the models used by the *Adviser* for the Fund are predictive in nature. The use of predictive models has inherent risks. Because predictive models are usually constructed based on historical data supplied by third parties, the success of relying on such models may depend heavily on the accuracy and reliability of the supplied historical data. The Fund bears the risk that the quantitative models used by the *Adviser* will not be successful in selecting companies for investment or in determining the weighting of investment positions that will enable the Fund to achieve its investment objective.

All models rely on correct market data inputs. If incorrect market data is entered into even a well-founded model, the resulting information will be incorrect. However, even if market data is input correctly, “model prices” will often differ substantially from market prices, especially for instruments with complex characteristics, such as derivative instruments.

Momentum Style Risk: Investing in or having exposure to securities with positive *momentum* entails investing in securities that have had above-average recent returns. These securities may be more volatile than a broad cross-section of securities. In addition, there may be periods during which the investment performance of the Fund while using a *momentum* strategy may suffer.

Securities Lending Risk: The Fund’s risk in lending portfolio securities, as with other extensions of credit, consists of the possibility of loss to the Fund due to (i) the inability of the borrower to return the securities, (ii) a delay in receiving additional collateral to adequately cover any fluctuations in the value of securities on loan, (iii) a delay in recovery of the securities, or (iv) the loss of rights in the collateral should the borrower fail financially. In addition, the Fund is responsible for any loss that might result from its investment of the borrower’s collateral.

Small-Cap Securities Risk: Investments in or exposure to the securities of companies with smaller market capitalizations involve higher risks in some respects than do investments in securities of larger companies. For example, prices of such securities are often more volatile than prices of large capitalization securities. In addition, due to thin trading in some such securities, an investment in these securities may be more illiquid (*i.e.*, harder to sell) than that of larger capitalization securities. Smaller capitalization companies also fail more often than larger companies and may have more limited management and financial resources than larger companies.

Performance Information

The performance information below shows summary performance information for the Fund in a bar chart and an average annual *total returns* table. The information shows you how the Fund’s performance has varied year by year and provides some indication of the risks of investing in the Fund. Effective April 1, 2015, the *Board of Trustees* of the *Trust* approved the reclassification of Class L Shares of the Fund as Class I Shares. Prior to April 1, 2015, the performance for the Class I Shares reflects the performance of the share class when it was classified as the Class L Shares of the Fund.

The Fund's past performance (before and after taxes), as provided by the bar chart and performance table that follows, is not an indication of future results. Updated information on the Fund's performance, including its current NAV per share, can be obtained by visiting <https://funds.aqr.com>.

Class I Shares—Total Returns

The bar chart below provides an illustration of how the Fund's performance has varied in each of the indicated calendar years.

Highest Quarterly Return

17.75% (4Q11)

Lowest Quarterly Return

-23.72% (3Q11)

Average Annual Total Returns as of December 31, 2017

The following table compares the Fund's average annual *total returns* for Class I Shares and Class N Shares as of December 31, 2017 to the *Russell 2000*[®] *Index*. You cannot invest directly in an index. The table includes all applicable fees and sales charges.

	One Year	Five Year	Since Inception
AQR Small Cap Momentum Style Fund— Class I*			
Return Before Taxes	17.39%	13.73%	15.65%
Return After Taxes on Distributions	14.87%	12.06%	14.27%
Return After Taxes on Distributions and Sale of Fund Shares	11.92%	10.66%	12.68%
<i>Russell 2000</i> [®] <i>Index</i> (reflects no deductions for fees, expenses or taxes)	14.65%	14.12%	16.28%
AQR Small Cap Momentum Style Fund— Class N*			
Return Before Taxes	17.17%	13.47%	13.83%
<i>Russell 2000</i> [®] <i>Index</i> (reflects no deductions for fees, expenses or taxes)	14.65%	14.12%	14.41%

* The inception dates for the Class I Shares and Class N Shares were July 9, 2009 and December 17, 2012, respectively.

After-tax returns are calculated using the historical highest individual marginal tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns are not relevant to investors who hold their Fund shares through tax-deferred arrangements such as 401(k) plans or individual retirement accounts. After-tax returns are for Class I Shares only. After-tax returns for other classes will vary.

AQR International Momentum Style Fund

Fund Summary – January 29, 2018¹

Investment Objective

The AQR International Momentum Style Fund (the “Fund”) seeks long-term capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

	Class I	Class N
Management Fee	0.40%	0.40%
Distribution (12b-1) Fee	None	0.25%
Other Expenses	0.23%	0.23%
Total Annual Fund Operating Expenses	0.63%	0.88%
Less: Fee Waivers and/or Expense Reimbursements ¹	0.08%	0.08%
Total Annual Fund Operating Expenses after Fee Waivers and/or Expense Reimbursements	0.55%	0.80%

¹ The *Adviser* has contractually agreed to waive its management fee and/or to reimburse expenses of the Fund to the extent necessary to maintain the total annual fund operating expenses (excluding interest, taxes, dividends on short sales, borrowing costs, acquired fund fees and expenses, interest expense relating to short sales, expenses related to class action claims and extraordinary expenses) at no more than 0.55% for Class I Shares and 0.80% for Class N Shares (the “Fee Waiver Agreement”). This arrangement will continue at least through January 28, 2019. The Fee Waiver Agreement may only be terminated with the consent of the *Board of Trustees*, including a majority of the Trustees of the *Trust* who are not “interested persons” of the *Trust* within the meaning of the *1940 Act*. The *Adviser* is entitled to recapture the fees waived and/or expenses reimbursed, only to the extent that the recapture can be made during the thirty-six months following the end of the month during which the *Adviser* waived fees or reimbursed expenses. In no case will the *Adviser* recapture any amount that would cause the aggregate operating expenses of the Fund attributable to a share class during a year in which a repayment is made to exceed the lesser of (i) the applicable limits in effect at the time of the waiver and/or reimbursement, or (ii) the applicable limits in effect at the time of recapture.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other *mutual funds*. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same and takes into account the effect of the Fee Waiver Agreement through January 28, 2019, as discussed in Footnote No. 1 to the Fee Table. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class I Shares	\$56	\$194	\$343	\$ 779
Class N Shares	\$82	\$273	\$480	\$1,077

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. During the fiscal year ended September 30, 2017, the Fund’s portfolio turnover rate was 84% of the average value of its portfolio.

Principal Investment Strategies of the Fund

The Fund pursues a *momentum* investment style by investing primarily in equity or equity-related securities (including, but not limited to, exchange-traded funds, equity index futures, equity index swaps, and depositary receipts) of non-U.S. companies that the *Adviser* determines to have positive *momentum*. The *Adviser* considers a security to have positive *momentum* primarily if it has outperformed other securities on a relative basis over a recent time period. Relative performance may be based on price *momentum*, earnings *momentum*, or other types of *momentum*, and will generally be measured over time periods ranging from one to twelve months. The criteria the *Adviser* uses for determining positive *momentum* may change from time to time.

The Fund will generally invest in developed markets outside the U.S. As of the date of this prospectus, the *Adviser* considers developed markets outside of the U.S. to be those countries that are included in the *MSCI World ex-U.S. Index* at the time of purchase. Although the Fund does not limit its investments to any one country, the Fund may invest in any one country without limit.

The *Adviser* determines the weight of each security in the portfolio using a combination of the market capitalization of the security and the *Adviser's* determination of the attractiveness of the security based on the *Adviser's* assessment of the security's *momentum* and additional criteria that form part of the *Adviser's* security selection process.

The *Adviser* believes that effective management of transaction costs is essential. Transaction costs include commissions, bid-ask spreads, market impact and time delays (the time between the investment decision and implementation, during which a market may move in favor of or against the Fund). The *Adviser* will seek to strike a balance between maintaining the desired exposure to positive *momentum* while attempting to keep transaction costs reasonably low.

The Fund invests significantly in common stocks. The Fund may also invest in or use financial futures contracts, forward foreign currency contracts and other types of equity-linked derivative instruments such as equity swaps and equity index swaps, as well as exchange-traded funds and similar pooled investment vehicles to gain exposure to the equity market and to maintain liquidity to pay for redemptions. A portion of the Fund's assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

To attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

Principal Risks of Investing in the Fund

Risk is inherent in all investing. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly from day to day and over time. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. ***The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.*** The following is a summary description of certain risks of investing in the Fund.

Common Stock Risk: The Fund may invest in, or have exposure to, common stocks. Common stocks are subject to greater fluctuations in market value than certain other asset classes as a result of such factors as a company's business performance, investor perceptions, stock market trends and general economic conditions.

Counterparty Risk: The Fund may enter into various types of derivative contracts. Many of these derivative contracts will be privately negotiated in the over-the-counter market. These contracts also involve exposure to credit risk, since contract performance depends in part on the financial condition of the counterparty. If a privately negotiated over-the-counter contract calls for payments by the Fund, the Fund must be prepared to make such payments when due. In addition, if a counterparty's creditworthiness declines, the Fund may not receive payments owed under the contract, or such payments may be delayed under such circumstances and the value of agreements with such counterparty can be expected to decline, potentially resulting in losses to the Fund.

Currency Risk: Currency risk is the risk that changes in currency exchange rates will negatively affect securities denominated in, and/or receiving revenues in, foreign currencies. The liquidity and trading value of foreign currencies could be affected by global economic factors, such as inflation, interest rate levels, and trade balances among countries, as well as the actions of sovereign governments and central banks. Adverse changes in currency exchange rates (relative to the U.S. dollar) may erode or reverse any potential gains from the Fund's investments in securities denominated in a foreign currency or may widen existing losses.

Derivatives Risk: In general, a derivative instrument typically involves leverage, *i.e.*, it provides exposure to potential gain or loss from a change in the level of the market price of the underlying security, currency or commodity (or a basket or index) in a notional amount that exceeds the amount of cash or assets required to establish or maintain the derivative instrument. Adverse changes in the value or level of the underlying asset or index, which the Fund may not directly own, can result in a loss to the Fund substantially greater than the amount invested in the derivative itself. The use of derivative instruments also exposes the Fund to additional risks and transaction costs. These instruments come in many varieties and have a wide range of potential risks and rewards, and may include, as further described in the section entitled "Principal Investment Strategies of the Fund," futures contracts, swaps and forward foreign currency contracts. A risk of the Fund's use of derivatives is that the fluctuations in their values may not correlate perfectly with the overall securities markets. Additionally, to the extent the Fund is required to segregate or "set aside" (often referred to as "asset segregation") liquid assets or otherwise cover open positions with respect to certain derivative instruments, the Fund may be required to sell portfolio instruments to meet these asset segregation requirements. There is a possibility that segregation involving a large percentage of the Fund's assets could impede portfolio management or the Fund's ability to meet redemption requests or other current obligations.

Foreign Investments Risk: Foreign investments often involve special risks not present in U.S. investments that can increase the chances that the Fund will lose money. These risks include:

- The Fund generally holds its foreign instruments and cash in foreign banks and securities depositories, which may be recently organized or new to the foreign custody business and may be subject to only limited or no regulatory oversight.
- Changes in foreign currency exchange rates can affect the value of the Fund's portfolio.
- The economies of certain foreign markets may not compare favorably with the economy of the United States with respect to such issues as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- The governments of certain countries may prohibit or impose substantial restrictions on foreign investments in their capital markets or in certain industries.
- Many foreign governments do not supervise and regulate stock exchanges, brokers and the sale of securities to the same extent as does the United States and may not have laws to protect investors that are comparable to U.S. securities laws.
- Settlement and clearance procedures in certain foreign markets may result in delays in payment for or delivery of securities not typically associated with settlement and clearance of U.S. investments.

Forward and Futures Contract Risk: The successful use of forward and futures contracts draws upon the *Adviser's* skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of forward and futures contracts, which may adversely affect the Fund's *NAV* and *total return*, are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the *Adviser's* inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

High Portfolio Turnover Risk: The investment techniques and strategies utilized by the Fund, including investments made on a shorter-term basis or in derivative instruments or instruments with a maturity of one year or less at the time of acquisition, may result in frequent portfolio trading and high portfolio turnover. High portfolio turnover rates will cause the Fund to incur higher levels of brokerage fees and commissions, which may reduce performance, and may cause higher levels of current tax liability to shareholders in the Fund.

Investment in Other Investment Companies Risk: As with other investments, investments in other investment companies, including exchange-traded funds ("ETFs"), are subject to market and manager risk. In addition, if the Fund acquires shares of investment companies, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies. The Fund may invest in money market *mutual funds*. An investment in a money market *mutual fund* is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Although money market *mutual funds* that invest in U.S. government securities seek to preserve the value of the Fund's investment at \$1.00 per share, it is possible to lose money by investing in a stable *NAV* money market *mutual fund*. Moreover, recent *SEC* rule amendments require prime money market *mutual funds* to use floating *NAVs* that do not preserve the value of the Fund's investment at \$1.00 per share. These rule amendments may impact the Fund's use of prime money market *mutual funds* for capital preservation purposes.

Manager Risk: If the *Adviser* makes poor investment decisions, it will negatively affect the Fund's investment performance.

Market Risk: Market risk is the risk that the markets on which the Fund's investments trade will increase or decrease in value. Prices may fluctuate widely over short or extended periods in response to company, market or economic news. Markets also tend to move in cycles, with periods of rising and falling prices. If there is a general decline in the securities and other markets, your investment in the Fund may lose value, regardless of the individual results of the securities and other instruments in which the Fund invests.

Mid-Cap Securities Risk: The Fund may invest in, or have exposure to, the securities of mid-cap companies. The prices of securities of mid-cap companies generally are more volatile than those of large capitalization companies and are more likely to be adversely affected than large-cap companies by changes in earnings results and investor expectations or poor economic or market conditions, including those experienced during a recession.

Model and Data Risk: Given the complexity of the investments and strategies of the Fund, the *Adviser* relies heavily on quantitative models and information and data supplied by third parties (“Models and Data”). Models and Data are used to construct sets of transactions and investments, to provide risk management insights, and to assist in hedging the Fund’s investments.

When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon expose the Fund to potential risks. Similarly, any hedging based on faulty Models and Data may prove to be unsuccessful. Some of the models used by the *Adviser* for the Fund are predictive in nature. The use of predictive models has inherent risks. Because predictive models are usually constructed based on historical data supplied by third parties, the success of relying on such models may depend heavily on the accuracy and reliability of the supplied historical data. The Fund bears the risk that the quantitative models used by the *Adviser* will not be successful in selecting companies for investment or in determining the weighting of investment positions that will enable the Fund to achieve its investment objective.

All models rely on correct market data inputs. If incorrect market data is entered into even a well-founded model, the resulting information will be incorrect. However, even if market data is input correctly, “model prices” will often differ substantially from market prices, especially for instruments with complex characteristics, such as derivative instruments.

Momentum Style Risk: Investing in or having exposure to securities with positive *momentum* entails investing in securities that have had above-average recent returns. These securities may be more volatile than a broad cross-section of securities. In addition, there may be periods during which the investment performance of the Fund while using a *momentum* strategy may suffer.

Securities Lending Risk: The Fund’s risk in lending portfolio securities, as with other extensions of credit, consists of the possibility of loss to the Fund due to (i) the inability of the borrower to return the securities, (ii) a delay in receiving additional collateral to adequately cover any fluctuations in the value of securities on loan, (iii) a delay in recovery of the securities, or (iv) the loss of rights in the collateral should the borrower fail financially. In addition, the Fund is responsible for any loss that might result from its investment of the borrower’s collateral.

Performance Information

The performance information below shows summary performance information for the Fund in a bar chart and an average annual *total returns* table. The information shows you how the Fund’s performance has varied year by year and provides some indication of the risks of investing in the Fund. Effective April 1, 2015, the *Board of Trustees* of the *Trust* approved the reclassification of Class L Shares of the Fund as Class I Shares. Prior to April 1, 2015, the performance for the Class I Shares reflects the performance of the share class when it was classified as the Class L Shares of the Fund.

The Fund’s past performance (before and after taxes), as provided by the bar chart and performance table that follows, is not an indication of future results. Updated information on the Fund’s performance, including its current NAV per share, can be obtained by visiting <https://funds.aqr.com>.

Class I Shares—Total Returns

The bar chart below provides an illustration of how the Fund’s performance has varied in each of the indicated calendar years.

Highest Quarterly Return

20.21% (3Q10)

Lowest Quarterly Return

-23.88% (3Q11)

Average Annual Total Returns as of December 31, 2017

The following table compares the Fund's average annual *total returns* for Class I Shares and Class N Shares as of December 31, 2017 to the *MSCI World ex-USA Index*. You cannot invest directly in an index. The table includes all applicable fees and sales charges.

	One Year	Five Year	Since Inception
AQR International Momentum Style Fund— Class I*			
Return Before Taxes	25.25%	6.07%	7.89%
Return After Taxes on Distributions	24.78%	5.66%	7.43%
Return After Taxes on Distributions and Sale of Fund Shares	14.98%	4.84%	6.39%
<i>MSCI World ex-USA Index</i> (reflects no deductions for fees, expenses or taxes)	24.21%	7.46%	8.67%
AQR International Momentum Style Fund— Class N*			
Return Before Taxes	24.99%	5.82%	5.98%
<i>MSCI World ex-USA Index</i> (reflects no deductions for fees, expenses or taxes)	24.21%	7.46%	7.57%

* The inception dates for the Class I Shares and Class N Shares were July 9, 2009 and December 17, 2012, respectively.

After-tax returns are calculated using the historical highest individual marginal tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns are not relevant to investors who hold their Fund shares through tax-deferred arrangements such as 401(k) plans or individual retirement accounts. After-tax returns are for Class I Shares only. After-tax returns for other classes will vary.

Investment Manager

The Fund's investment manager is AQR Capital Management, LLC.

Portfolio Managers

AQR Emerging Momentum Style Fund

Fund Summary – January 29, 2018

Investment Objective

The AQR Emerging Momentum Style Fund (the “Fund”) seeks long-term capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

	Class I	Class N
Management Fee	0.55%	0.55%
Distribution (12b-1) Fee	None	0.25%
Other Expenses	1.97%	1.93%
Acquired Fund Fees and Expenses	0.02%	0.02%
Total Annual Fund Operating Expenses	2.54%	2.75%
Less: Fee Waivers and/or Expense Reimbursements ¹	1.82%	1.78%
Total Annual Fund Operating Expenses after Fee Waivers and/or Expense Reimbursements	0.72%	0.97%

¹ The *Adviser* has contractually agreed to waive its management fee and/or to reimburse expenses of the Fund to the extent necessary to maintain the total annual fund operating expenses (excluding interest, taxes, dividends on short sales, borrowing costs, acquired fund fees and expenses, interest expense relating to short sales, expenses related to class action claims and extraordinary expenses) at no more than 0.70% for Class I Shares and 0.95% for Class N Shares (the “Fee Waiver Agreement”). This arrangement will continue at least through January 28, 2019. The Fee Waiver Agreement may only be terminated with the consent of the *Board of Trustees*, including a majority of the Trustees of the *Trust* who are not “interested persons” of the *Trust* within the meaning of the *1940 Act*. The *Adviser* is entitled to recapture the fees waived and/or expenses reimbursed, only to the extent that the recapture can be made during the thirty-six months following the end of the month during which the *Adviser* waived fees or reimbursed expenses. In no case will the *Adviser* recapture any amount that would cause the aggregate operating expenses of the Fund attributable to a share class during a year in which a repayment is made to exceed the lesser of (i) the applicable limits in effect at the time of the waiver and/or reimbursement, or (ii) the applicable limits in effect at the time of recapture.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other *mutual funds*. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same and takes into account the effect of the Fee Waiver Agreement through January 28, 2019, as discussed in Footnote No. 1 to the Fee Table. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class I Shares	\$74	\$616	\$1,186	\$2,738
Class N Shares	\$99	\$684	\$1,296	\$2,950

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. During the fiscal year ended September 30, 2017, the Fund’s portfolio turnover rate was 121% of the average value of its portfolio.

Principal Investment Strategies of the Fund

The Fund pursues a *momentum* investment style by investing primarily in equity or equity-related instruments (including, but not limited to, exchange-traded funds, equity index futures, equity index swaps and depositary receipts) of large- and mid-cap emerging market companies that the *Adviser* determines to have positive *momentum*. The *Adviser* considers a security to have positive *momentum* primarily if it has outperformed other securities on a relative basis over a recent time period. Relative performance may be based on price *momentum*, earnings *momentum*, or other types of *momentum*, and will generally be measured over time periods ranging from one to twelve months. The criteria the *Adviser* uses for determining positive *momentum* may change from time to time. Under normal market conditions, the Fund will invest at least 80% of its net assets (including borrowings for investment purposes) in emerging market companies.

A company will be considered to be an emerging market company if it is organized, domiciled, or has a principal place of business in an emerging market. Emerging markets include countries that are included in the *MSCI Emerging Markets Index* at the time of purchase. Equity-related instruments include instruments that provide exposure to the change in value of an emerging market company. The Fund may also invest in, and have exposure to, non-emerging market companies if the *Adviser* considers it advisable to achieve the Fund's investment objective.

The *Adviser* considers the Fund's universe to be those large- and mid-cap companies with market capitalizations within the range of the *MSCI Emerging Markets Index* at the time of purchase. Although the Fund does not limit its investments to any one country, the Fund may invest in any one country without limit.

The *Adviser* determines the weight of each security in the portfolio using a combination of the market capitalization of the security and the *Adviser's* determination of the attractiveness of the security based on the *Adviser's* assessment of the security's *momentum* and additional criteria that form part of the *Adviser's* security selection process. The *Adviser* expects to rebalance the portfolio monthly, at which time the *Adviser* will consider which securities are eligible for inclusion in the portfolio by virtue of their capitalization and positive *momentum*.

The *Adviser* believes that effective management of transaction costs is essential. Transaction costs include commissions, bid-ask spreads, market impact and time delays (the time between the investment decision and implementation, during which a market may move in favor of or against the Fund). The *Adviser* will seek to strike a balance between maintaining the desired exposure to positive *momentum* while attempting to keep transaction costs reasonably low.

The Fund invests significantly in common stocks. The Fund may also invest in or use financial futures contracts, forward foreign currency contracts and other types of equity-linked derivative instruments such as equity swaps and equity index swaps, as well as exchange-traded-funds and similar pooled investment vehicles to gain exposure to the equity market and to maintain liquidity to pay for redemptions. A portion of the Fund's assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

To attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

Principal Risks of Investing in the Fund

Risk is inherent in all investing. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly from day to day and over time. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. ***The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.*** The following is a summary description of certain risks of investing in the Fund.

Common Stock Risk: The Fund may invest in, or have exposure to, common stocks. Common stocks are subject to greater fluctuations in market value than certain other asset classes as a result of such factors as a company's business performance, investor perceptions, stock market trends and general economic conditions.

Counterparty Risk: The Fund may enter into various types of derivative contracts. Many of these derivative contracts will be privately negotiated in the over-the-counter market. These contracts also involve exposure to credit risk, since contract performance depends in part on the financial condition of the counterparty. If a privately negotiated over-the-counter contract calls for payments by the Fund, the Fund must be prepared to make such payments when due. In addition, if a counterparty's creditworthiness declines, the Fund may not receive payments owed under the contract, or such payments may be delayed under such circumstances and the value of agreements with such counterparty can be expected to decline, potentially resulting in losses to the Fund.

Currency Risk: Currency risk is the risk that changes in currency exchange rates will negatively affect securities denominated in, and/or receiving revenues in, foreign currencies. The liquidity and trading value of foreign currencies could be affected by global economic factors, such as inflation, interest rate levels, and trade balances among countries, as well as the actions of sovereign governments and central banks. Adverse changes in currency exchange rates (relative to the U.S. dollar) may erode or reverse any potential gains from the Fund's investments in securities denominated in a foreign currency or may widen existing losses.

Derivatives Risk: In general, a derivative instrument typically involves leverage, *i.e.*, it provides exposure to potential gain or loss from a change in the level of the market price of the underlying security, currency or commodity (or a basket or index) in a notional amount that exceeds the amount of cash or assets required to establish or maintain the derivative instrument. Adverse changes in the value or level of the underlying asset or index, which the Fund may not directly own, can result in a loss to the Fund substantially greater than the amount invested in the derivative itself. The use of derivative instruments also exposes the Fund to additional risks and transaction costs. These instruments come in many

varieties and have a wide range of potential risks and rewards, and may include, as further described in the section entitled “Principal Investment Strategies of the Fund,” futures contracts, forward foreign currency contracts and swaps. A risk of the Fund’s use of derivatives is that the fluctuations in their values may not correlate perfectly with the overall securities markets. Additionally, to the extent the Fund is required to segregate or “set aside” (often referred to as “asset segregation”) liquid assets or otherwise cover open positions with respect to certain derivative instruments, the Fund may be required to sell portfolio instruments to meet these asset segregation requirements. There is a possibility that segregation involving a large percentage of the Fund’s assets could impede portfolio management or the Fund’s ability to meet redemption requests or other current obligations.

Emerging Market Risk: The Fund intends to have exposure to emerging markets. Emerging markets are riskier than more developed markets because they tend to develop unevenly and may never fully develop. Investments in emerging markets may be considered speculative. Emerging markets are more likely to experience hyperinflation and currency devaluations, which adversely affect returns to U.S. investors. In addition, many emerging securities markets have far lower trading volumes and less liquidity than developed markets.

Foreign Investments Risk: Foreign investments often involve special risks not present in U.S. investments that can increase the chances that the Fund will lose money. These risks include:

- The Fund generally holds its foreign instruments and cash in foreign banks and securities depositories, which may be recently organized or new to the foreign custody business and may be subject to only limited or no regulatory oversight.
- Changes in foreign currency exchange rates can affect the value of the Fund’s portfolio.
- The economies of certain foreign markets may not compare favorably with the economy of the United States with respect to such issues as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- The governments of certain countries may prohibit or impose substantial restrictions on foreign investments in their capital markets or in certain industries.
- Many foreign governments do not supervise and regulate stock exchanges, brokers and the sale of securities to the same extent as does the United States and may not have laws to protect investors that are comparable to U.S. securities laws.
- Settlement and clearance procedures in certain foreign markets may result in delays in payment for or delivery of securities not typically associated with settlement and clearance of U.S. investments.

Forward and Futures Contract Risk: The successful use of forward and futures contracts draws upon the *Adviser’s* skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of forward and futures contracts, which may adversely affect the Fund’s *NAV* and *total return*, are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the *Adviser’s* inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

High Portfolio Turnover Risk: The investment techniques and strategies utilized by the Fund, including investments made on a shorter-term basis or in derivative instruments or instruments with a maturity of one year or less at the time of acquisition, may result in frequent portfolio trading and high portfolio turnover. High portfolio turnover rates will cause the Fund to incur higher levels of brokerage fees and commissions, which may reduce performance, and may cause higher levels of current tax liability to shareholders in the Fund.

Investment in Other Investment Companies Risk: As with other investments, investments in other investment companies, including exchange-traded funds (“ETFs”), are subject to market and manager risk. In addition, if the Fund acquires shares of investment companies, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies. The Fund may invest in money market *mutual funds*. An investment in a money market *mutual fund* is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Although money market *mutual funds* that invest in U.S. government securities seek to preserve the value of the Fund’s investment at \$1.00 per share, it is possible to lose money by investing in a stable *NAV* money market *mutual fund*. Moreover, recent *SEC* rule amendments require prime money market *mutual funds* to use floating *NAVs* that do not preserve the value of the Fund’s investment at \$1.00 per share. These rule amendments may impact the Fund’s use of prime money market *mutual funds* for capital preservation purposes.

Manager Risk: If the *Adviser* makes poor investment decisions, it will negatively affect the Fund's investment performance.

Market Risk: Market risk is the risk that the markets on which the Fund's investments trade will increase or decrease in value. Prices may fluctuate widely over short or extended periods in response to company, market or economic news. Markets also tend to move in cycles, with periods of rising and falling prices. If there is a general decline in the securities and other markets, your investment in the Fund may lose value, regardless of the individual results of the securities and other instruments in which the Fund invests.

Mid-Cap Securities Risk: The Fund may invest in, or have exposure to, the securities of mid-cap companies. The prices of securities of mid-cap companies generally are more volatile than those of large capitalization companies and are more likely to be adversely affected than large-cap companies by changes in earnings results and investor expectations or poor economic or market conditions, including those experienced during a recession.

Model and Data Risk: Given the complexity of the investments and strategies of the Fund, the *Adviser* relies heavily on quantitative models and information and data supplied by third parties ("Models and Data"). Models and Data are used to construct sets of transactions and investments, to provide risk management insights, and to assist in hedging the Fund's investments.

When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon expose the Fund to potential risks. Similarly, any hedging based on faulty Models and Data may prove to be unsuccessful. Some of the models used by the *Adviser* for the Fund are predictive in nature. The use of predictive models has inherent risks. Because predictive models are usually constructed based on historical data supplied by third parties, the success of relying on such models may depend heavily on the accuracy and reliability of the supplied historical data. The Fund bears the risk that the quantitative models used by the *Adviser* will not be successful in selecting companies for investment or in determining the weighting of investment positions that will enable the Fund to achieve its investment objective.

All models rely on correct market data inputs. If incorrect market data is entered into even a well-founded model, the resulting information will be incorrect. However, even if market data is input correctly, "model prices" will often differ substantially from market prices, especially for instruments with complex characteristics, such as derivative instruments.

Momentum Style Risk: Investing in or having exposure to securities with positive *momentum* entails investing in securities that have had above-average recent returns. These securities may be more volatile than a broad cross-section of securities. In addition, there may be periods during which the investment performance of the Fund while using a *momentum* strategy may suffer.

Securities Lending Risk: The Fund's risk in lending portfolio securities, as with other extensions of credit, consists of the possibility of loss to the Fund due to (i) the inability of the borrower to return the securities, (ii) a delay in receiving additional collateral to adequately cover any fluctuations in the value of securities on loan, (iii) a delay in recovery of the securities, or (iv) the loss of rights in the collateral should the borrower fail financially. In addition, the Fund is responsible for any loss that might result from its investment of the borrower's collateral.

Performance Information

The performance information below shows summary performance information for the Fund in a bar chart and an average annual *total returns* table. The information shows you how the Fund's performance has varied year by year and provides some indication of the risks of investing in the Fund. Effective April 1, 2015, the *Board of Trustees* of the *Trust* approved the reclassification of Class L Shares of the Fund as Class I Shares. Prior to April 1, 2015, the performance for the Class I Shares reflects the performance of the share class when it was classified as the Class L Shares of the Fund.

The Fund's past performance (before and after taxes), as provided by the bar chart and performance table that follows, is not an indication of future results. Updated information on the Fund's performance, including its current NAV per share, can be obtained by visiting <https://funds.aqr.com>.

Class I Shares—Total Returns

The bar chart below provides an illustration of how the Fund's performance has varied in each of the indicated calendar years.

Highest Quarterly Return

12.37% (3Q17)

Lowest Quarterly Return

-17.68% (3Q15)

Average Annual Total Returns as of December 31, 2017

The following table compares the Fund's average annual *total returns* for Class I Shares and Class N Shares as of December 31, 2017 to the *MSCI Emerging Markets Index*. You cannot invest directly in an index. The table includes all applicable fees and sales charges.

	One Year	Since Inception (May 13, 2014)
AQR Emerging Momentum Style Fund—Class I		
Return Before Taxes	44.26%	5.75%
Return After Taxes on Distributions	43.85%	5.34%
Return After Taxes on Distributions and Sale of Fund Shares	25.82%	4.45%
AQR Emerging Momentum Style Fund—Class N		
Return Before Taxes	44.04%	5.51%
<i>MSCI Emerging Markets Index</i> (reflects no deductions for fees, expenses or taxes)	37.28%	6.02%

After-tax returns are calculated using the historical highest individual marginal tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns are not relevant to investors who hold their Fund shares through tax-deferred arrangements such as 401(k) plans or individual retirement accounts. After-tax returns are for Class I Shares only. After-tax returns for other classes will vary.

Investment Manager

The Fund's investment manager is AQR Capital Management, LLC.

Portfolio Managers

Name	Portfolio Manager of the Fund Since	Title

AQR TM Large Cap Momentum Style Fund

Fund Summary – January 29, 2018

Investment Objective

The AQR TM Large Cap Momentum Style Fund (the “Fund”) seeks long-term after-tax capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

	Class I	Class N
Management Fee	0.25%	0.25%
Distribution (12b-1) Fee	None	0.25%
Other Expenses	0.23%	0.20%
Acquired Fund Fees and Expenses	0.01%	0.01%
Total Annual Fund Operating Expenses	0.49%	0.71%
Less: Fee Waivers and/or Expense Reimbursements ¹	0.08%	0.05%
Total Annual Fund Operating Expenses after Fee Waivers and/or Expense Reimbursements	0.41%	0.66%

¹ The *Adviser* has contractually agreed to waive its management fee and/or to reimburse expenses of the Fund to the extent necessary to maintain the total annual fund operating expenses (excluding interest, taxes, dividends on short sales, borrowing costs, acquired fund fees and expenses, interest expense relating to short sales, expenses related to class action claims and extraordinary expenses) at no more than 0.40% for Class I Shares and 0.65% for Class N Shares (the “Fee Waiver Agreement”). This arrangement will continue at least through January 28, 2019. The Fee Waiver Agreement may only be terminated with the consent of the *Board of Trustees*, including a majority of the Trustees of the *Trust* who are not “interested persons” of the *Trust* within the meaning of the *1940 Act*. The *Adviser* is entitled to recapture the fees waived and/or expenses reimbursed, only to the extent that the recapture can be made during the thirty-six months following the end of the month during which the *Adviser* waived fees or reimbursed expenses. In no case will the *Adviser* recapture any amount that would cause the aggregate operating expenses of the Fund attributable to a share class during a year in which a repayment is made to exceed the lesser of (i) the applicable limits in effect at the time of the waiver and/or reimbursement, or (ii) the applicable limits in effect at the time of recapture.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other *mutual funds*. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same and takes into account the effect of the Fee Waiver Agreement through January 28, 2019, as discussed in Footnote No. 1 to the Fee Table. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class I Shares	\$42	\$149	\$266	\$608
Class N Shares	\$67	\$222	\$390	\$878

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. During the fiscal year ended September 30, 2017, the Fund’s portfolio turnover rate was 57% of the average value of its portfolio.

Principal Investment Strategies of the Fund

The Fund pursues a *momentum* investment style by investing primarily in equity or equity-related securities (including, but not limited to, exchange-traded funds, equity index futures, and depositary receipts) of large-cap companies traded on a principal U.S. exchange or over-the-counter market that the *Adviser* determines to have positive *momentum*. The *Adviser* considers a security to have positive *momentum* primarily if it has outperformed other securities on a relative basis over a recent time period. Relative performance may be based on price *momentum*, earnings *momentum*, or other types of *momentum*, and will generally be measured over time periods ranging from one to twelve months. The criteria the *Adviser* uses for determining positive *momentum* may change from time to time. The “TM” in the Fund’s name reflects that the Fund employs a “tax management” strategy which considers the potential impact of federal income tax on shareholders’ investment return.

Under normal market circumstances, the Fund will invest at least 80% of its net assets (including any borrowings for investment purposes) in large-cap U.S. companies. As of the date of this prospectus, the *Adviser* generally considers large-cap U.S. companies to be those companies with market capitalizations within the range of the *Russell 1000*[®] *Index* at the time of purchase. The Fund may also invest in mid-cap companies.

The *Adviser* determines the weight of each security in the portfolio using a combination of the market capitalization of the security and the *Adviser's* determination of the attractiveness of the security based on the *Adviser's* assessment of the security's *momentum* and additional criteria that form part of the *Adviser's* security selection process.

When selecting securities for the portfolio, the *Adviser* also employs a tax management strategy which considers the potential impact of federal income tax on shareholders' investment return. This tax management strategy is generally designed so investors receive lower distributions of realized capital gains than funds that do not take tax consequences into account. Investors should not expect that there will be no capital gain distributions, however, as the Fund will balance investment considerations with tax consequences in making investment decisions. The techniques and strategies that may be used to attempt to reduce the impact of federal income tax on shareholders' investment returns include:

- when believed by the *Adviser* to be appropriate, selling stocks to realize losses, with the specific purpose of offsetting gains;
- deferring realizations of net capital gains;
- limiting portfolio turnover that may result in taxable gains; and
- choosing a tax accounting method that reduces tax liability: for example, using the highest-in, first-out (HIFO) method which sells tax lots of securities that have a higher tax basis before selling tax lots of securities that have a lower tax basis.

The *Adviser* believes that effective management of transaction costs is essential. Transaction costs include commissions, bid-ask spreads, market impact and time delays (the time between the investment decision and implementation, during which a market may move in favor of or against the Fund).

In order to manage transaction costs and minimize adverse tax consequences, the *Adviser* does not intend to rebalance the Fund's portfolio mechanically or to purchase and sell exclusively those securities defined by the eligibility criteria described above. The *Adviser* will seek to maintain flexibility to trade opportunistically in order to strike a balance between maintaining the desired exposure to positive *momentum* while attempting to keep transaction costs reasonably low and to minimize federal income taxes on returns.

The Fund invests significantly in common stocks. The Fund may also invest in or use financial futures contracts and other types of equity-linked derivative instruments such as equity swaps and equity index swaps, as well as exchange-traded funds and similar pooled investment vehicles to gain exposure to the equity market and to maintain liquidity to pay for redemptions. A portion of the Fund's assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

To attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

Principal Risks of Investing in the Fund

Risk is inherent in all investing. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly from day to day and over time. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. ***The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.*** The following is a summary description of certain risks of investing in the Fund.

Common Stock Risk: The Fund may invest in, or have exposure to, common stocks. Common stocks are subject to greater fluctuations in market value than certain other asset classes as a result of such factors as a company's business performance, investor perceptions, stock market trends and general economic conditions.

Counterparty Risk: The Fund may enter into various types of derivative contracts. Many of these derivative contracts will be privately negotiated in the over-the-counter market. These contracts also involve exposure to credit risk, since contract performance depends in part on the financial condition of the counterparty. If a privately negotiated over-the-counter contract calls for payments by the Fund, the Fund must be prepared to make such payments when due. In addition, if a counterparty's creditworthiness declines, the Fund may not receive payments owed under the contract, or such payments may be delayed under such circumstances and the value of agreements with such counterparty can be expected to decline, potentially resulting in losses to the Fund.

Derivatives Risk: In general, a derivative instrument typically involves leverage, *i.e.*, it provides exposure to potential gain or loss from a change in the level of the market price of the underlying security, currency or commodity (or a basket or index) in a notional amount that exceeds the amount of cash or assets required to establish or maintain the derivative instrument. Adverse changes in the value or level of the underlying asset or index, which the Fund may not directly own, can result in a loss to the Fund substantially greater than the amount invested in the derivative itself. The use of derivative instruments also exposes the Fund to additional risks and transaction costs. These instruments come in many varieties and have a wide range of potential risks and rewards, and may include, as further described in the section entitled “Principal Investment Strategies of the Fund,” futures contracts and swaps. A risk of the Fund’s use of derivatives is that the fluctuations in their values may not correlate perfectly with the overall securities markets. Additionally, to the extent the Fund is required to segregate or “set aside” (often referred to as “asset segregation”) liquid assets or otherwise cover open positions with respect to certain derivative instruments, the Fund may be required to sell portfolio instruments to meet these asset segregation requirements. There is a possibility that segregation involving a large percentage of the Fund’s assets could impede portfolio management or the Fund’s ability to meet redemption requests or other current obligations.

Futures Contract Risk: The successful use of futures contracts draws upon the *Adviser’s* skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of futures contracts, which may adversely affect the Fund’s *NAV* and *total return*, are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the futures contract; (b) possible lack of a liquid secondary market for a futures contract and the resulting inability to close a futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the *Adviser’s* inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

Investment in Other Investment Companies Risk: As with other investments, investments in other investment companies, including exchange-traded funds (“ETFs”), are subject to market and manager risk. In addition, if the Fund acquires shares of investment companies, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies. The Fund may invest in money market *mutual funds*. An investment in a money market *mutual fund* is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Although money market *mutual funds* that invest in U.S. government securities seek to preserve the value of the Fund’s investment at \$1.00 per share, it is possible to lose money by investing in a stable *NAV* money market *mutual fund*. Moreover, recent SEC rule amendments require prime money market *mutual funds* to use floating *NAV*s that do not preserve the value of the Fund’s investment at \$1.00 per share. These rule amendments may impact the Fund’s use of prime money market *mutual funds* for capital preservation purposes.

Manager Risk: If the *Adviser* makes poor investment decisions, it will negatively affect the Fund’s investment performance.

Market Risk: Market risk is the risk that the markets on which the Fund’s investments trade will increase or decrease in value. Prices may fluctuate widely over short or extended periods in response to company, market or economic news. Markets also tend to move in cycles, with periods of rising and falling prices. If there is a general decline in the securities and other markets, your investment in the Fund may lose value, regardless of the individual results of the securities and other instruments in which the Fund invests.

Mid-Cap Securities Risk: The Fund may invest in, or have exposure to, the securities of mid-cap companies. The prices of securities of mid-cap companies generally are more volatile than those of large capitalization companies and are more likely to be adversely affected than large-cap companies by changes in earnings results and investor expectations or poor economic or market conditions, including those experienced during a recession.

Model and Data Risk: Given the complexity of the investments and strategies of the Fund, the *Adviser* relies heavily on quantitative models and information and data supplied by third parties (“Models and Data”). Models and Data are used to construct sets of transactions and investments, to provide risk management insights, and to assist in hedging the Fund’s investments.

When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon expose the Fund to potential risks. Similarly, any hedging based on faulty Models and Data may prove to be unsuccessful. Some of the models used by the *Adviser* for the Fund are predictive in nature. The use of predictive models has inherent risks. Because predictive models are usually constructed based on historical data supplied by third parties, the success of relying on such models may depend heavily on the accuracy and reliability of the supplied historical data. The Fund bears the risk that the quantitative models used by the *Adviser* will not be successful in selecting companies for investment or in determining the weighting of investment positions that will enable the Fund to achieve its investment objective.

All models rely on correct market data inputs. If incorrect market data is entered into even a well-founded model, the resulting information will be incorrect. However, even if market data is input correctly, “model prices” will often differ substantially from market prices, especially for instruments with complex characteristics, such as derivative instruments.

Momentum Style Risk: Investing in or having exposure to securities with positive *momentum* entails investing in securities that have had above-average recent returns. These securities may be more volatile than a broad cross-section of securities. In addition, there may be periods during which the investment performance of the Fund while using a *momentum* strategy may suffer.

Securities Lending Risk: The Fund’s risk in lending portfolio securities, as with other extensions of credit, consists of the possibility of loss to the Fund due to (i) the inability of the borrower to return the securities, (ii) a delay in receiving additional collateral to adequately cover any fluctuations in the value of securities on loan, (iii) a delay in recovery of the securities, or (iv) the loss of rights in the collateral should the borrower fail financially. In addition, the Fund is responsible for any loss that might result from its investment of the borrower’s collateral.

Tax-Managed Investment Risk: The performance of the Fund may deviate from that of non-tax managed funds and may not provide as high a return before consideration of federal income tax consequences as non-tax managed funds. The Fund’s tax-sensitive investment strategy involves active management with the intent of minimizing the amount of realized gains from the sale of securities; however, market conditions may limit the Fund’s ability to execute such strategy. The Fund’s ability to utilize various tax-management techniques may be curtailed or eliminated in the future by tax legislation or regulation. Although the Fund expects that a smaller portion of its *total return* will consist of taxable distributions to shareholders as compared to non-tax managed funds, there can be no assurance about the size of taxable distributions to shareholders.

Performance Information

The performance information below shows summary performance information for the Fund in a bar chart and an average annual *total returns* table. The information shows you how the Fund’s performance has varied year by year and provides some indication of the risks of investing in the Fund. Effective April 1, 2015, the *Board of Trustees* of the *Trust* approved the reclassification of Class L Shares of the Fund as Class I Shares. Prior to April 1, 2015, the performance for the Class I Shares reflects the performance of the share class when it was classified as the Class L Shares of the Fund.

The Fund’s past performance (before and after taxes), as provided by the bar chart and performance table that follows, is not an indication of future results. Updated information on the Fund’s performance, including its current NAV per share, can be obtained by visiting <https://funds.aqr.com>.

Class I Shares—Total Returns

The bar chart below provides an illustration of how the Fund’s performance has varied in each of the indicated calendar years.

Highest Quarterly Return

10.50% (4Q13)

Lowest Quarterly Return

-5.93% (3Q15)

Average Annual Total Returns as of December 31, 2017

The following table compares the Fund's average annual *total returns* for Class I Shares and Class N Shares as of December 31, 2017 to the *Russell 1000*[®] *Index*. You cannot invest directly in an index. The table includes all applicable fees and sales charges.

	One Year	Five Year	Since Inception
AQR TM Large Cap Momentum Style Fund— Class I*			
Return Before Taxes	23.78%	14.71%	14.72%
Return After Taxes on Distributions	23.56%	14.32%	14.30%
Return After Taxes on Distributions and Sale of Fund Shares	13.64%	11.76%	11.88%
<i>Russell 1000</i> [®] <i>Index</i> (reflects no deductions for fees, expenses or taxes)	21.69%	15.71%	15.03%
AQR TM Large Cap Momentum Style Fund— Class N*			
Return Before Taxes	23.41%	14.43%	14.33%
<i>Russell 1000</i> [®] <i>Index</i> (reflects no deductions for fees, expenses or taxes)	21.69%	15.71%	15.55%

* The inception dates for the Class I Shares and Class N Shares were January 27, 2012 and December 17, 2012, respectively.

After-tax returns are calculated using the historical highest individual marginal tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns are not relevant to investors who hold their Fund shares through tax-deferred arrangements such as 401(k) plans or individual retirement accounts. After-tax returns are for Class I Shares only. After-tax returns for other classes will vary.

Investment Manager

The Fund's investment manager is AQR Capital Management, LLC.

Portfolio Managers

Name	Portfolio Manager of the Fund Since	Title
Clifford S. Asness, Ph.D., M.B.A.	January 27, 2012	Managing and Founding Principal of the <i>Adviser</i>

AQR TM Small Cap Momentum Style Fund

Fund Summary – January 29, 2018

Investment Objective

The AQR TM Small Cap Momentum Style Fund (the “Fund”) seeks long-term after-tax capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

	Class I	Class N
Management Fee	0.45%	0.45%
Distribution (12b-1) Fee	None	0.25%
Other Expenses	0.47%	0.42%
Acquired Fund Fees and Expenses	0.01%	0.01%
Total Annual Fund Operating Expenses	0.93%	1.13%
Less: Fee Waivers and/or Expense Reimbursements ¹	0.32%	0.27%
Total Annual Fund Operating Expenses after Fee Waivers and/or Expense Reimbursements	0.61%	0.86%

¹ The *Adviser* has contractually agreed to waive its management fee and/or to reimburse expenses of the Fund to the extent necessary to maintain the total annual fund operating expenses (excluding interest, taxes, dividends on short sales, borrowing costs, acquired fund fees and expenses, interest expense relating to short sales, expenses related to class action claims and extraordinary expenses) at no more than 0.60% for Class I Shares and 0.85% for Class N Shares (the “Fee Waiver Agreement”). This arrangement will continue at least through January 28, 2019. The Fee Waiver Agreement may only be terminated with the consent of the *Board of Trustees*, including a majority of the Trustees of the *Trust* who are not “interested persons” of the *Trust* within the meaning of the *1940 Act*. The *Adviser* is entitled to recapture the fees waived and/or expenses reimbursed, only to the extent that the recapture can be made during the thirty-six months following the end of the month during which the *Adviser* waived fees or reimbursed expenses. In no case will the *Adviser* recapture any amount that would cause the aggregate operating expenses of the Fund attributable to a share class during a year in which a repayment is made to exceed the lesser of (i) the applicable limits in effect at the time of the waiver and/or reimbursement, or (ii) the applicable limits in effect at the time of recapture.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other *mutual funds*. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same and takes into account the effect of the Fee Waiver Agreement through January 28, 2019, as discussed in Footnote No. 1 to the Fee Table. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class I Shares	\$62	\$264	\$483	\$1,114
Class N Shares	\$88	\$332	\$596	\$1,351

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. During the fiscal year ended September 30, 2017, the Fund’s portfolio turnover rate was 69% of the average value of its portfolio.

Principal Investment Strategies of the Fund

The Fund pursues a *momentum* investment style by investing primarily in equity or equity-related securities (including, but not limited to, exchange-traded funds, equity index futures, and depositary receipts) of small-cap companies traded on a principal U.S. exchange or over-the-counter market that the *Adviser* determines to have positive *momentum*. The *Adviser* considers a security to have positive *momentum* primarily if it has outperformed other securities on a relative basis over a recent time period. Relative performance may be based on price *momentum*, earnings *momentum*, or other types of *momentum*, and will generally be measured over time periods ranging from one to twelve months. The criteria the *Adviser* uses for determining positive *momentum* may change from time to time. The “TM” in the Fund’s name reflects that the Fund employs a “tax management” strategy which considers the potential impact of federal income tax on shareholders’ investment return.

Under normal market circumstances, the Fund will invest at least 80% of its net assets (including any borrowings for investment purposes) in small-cap U.S. companies. As of the date of this prospectus, the *Adviser* considers small-cap U.S. companies to be those companies with market capitalizations within the range of the *Russell 2000*[®] *Index* at the time of purchase.

The *Adviser* determines the weight of each security in the portfolio using a combination of the market capitalization of the security and the *Adviser's* determination of the attractiveness of the security based on the *Adviser's* assessment of the security's *momentum* and additional criteria that form part of the *Adviser's* security selection process.

When selecting securities for the portfolio, the *Adviser* also employs a tax management strategy which considers the potential impact of federal income tax on shareholders' investment return. This tax management strategy is generally designed so investors receive lower distributions of realized capital gains than funds that do not take tax consequences into account. Investors should not expect that there will be no capital gain distributions, however, as the Fund will balance investment considerations with tax consequences in making investment decisions. The techniques and strategies that may be used to attempt to reduce the impact of federal income tax on shareholders' investment returns include:

- when believed by the *Adviser* to be appropriate, selling stocks to realize losses, with the specific purpose of offsetting gains;
- deferring realizations of net capital gains;
- limiting portfolio turnover that may result in taxable gains; and
- choosing a tax accounting method that reduces tax liability: for example, using the highest-in, first-out (HIFO) method which sells tax lots of securities that have a higher tax basis before selling tax lots of securities that have a lower tax basis.

The *Adviser* believes that effective management of transaction costs is essential. Transaction costs include commissions, bid-ask spreads, market impact and time delays (the time between the investment decision and implementation, during which a market may move in favor of or against the Fund).

In order to manage transaction costs and minimize adverse tax consequences, the *Adviser* does not intend to rebalance the Fund's portfolio mechanically or to purchase and sell exclusively those securities defined by the eligibility criteria described above. The *Adviser* will seek to maintain flexibility to trade opportunistically in order to strike a balance between maintaining the desired exposure to positive *momentum* while attempting to keep transaction costs reasonably low and to minimize federal income taxes on returns.

The Fund invests significantly in common stocks. The Fund may also invest in or use financial futures contracts and other types of equity-linked derivative instruments such as equity swaps and equity index swaps, as well as exchange-traded funds and similar pooled investment vehicles to gain exposure to the equity market and to maintain liquidity to pay for redemptions. A portion of the Fund's assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

To attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

Principal Risks of Investing in the Fund

Risk is inherent in all investing. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly from day to day and over time. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. ***The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.*** The following is a summary description of certain risks of investing in the Fund.

Common Stock Risk: The Fund may invest in, or have exposure to, common stocks. Common stocks are subject to greater fluctuations in market value than certain other asset classes as a result of such factors as a company's business performance, investor perceptions, stock market trends and general economic conditions.

Counterparty Risk: The Fund may enter into various types of derivative contracts. Many of these derivative contracts will be privately negotiated in the over-the-counter market. These contracts also involve exposure to credit risk, since contract performance depends in part on the financial condition of the counterparty. If a privately negotiated over-the-counter contract calls for payments by the Fund, the Fund must be prepared to make such payments when due. In addition, if a counterparty's creditworthiness declines, the Fund may not receive payments owed under the contract, or such payments may be delayed under such circumstances and the value of agreements with such counterparty can be expected to decline, potentially resulting in losses to the Fund.

Derivatives Risk: In general, a derivative instrument typically involves leverage, *i.e.*, it provides exposure to potential gain or loss from a change in the level of the market price of the underlying security, currency or commodity (or a basket or index) in a notional amount that exceeds the amount of cash or assets required to establish or maintain the derivative instrument. Adverse changes in the value or level of the underlying asset or index, which the Fund may not directly own, can result in a loss to the Fund substantially greater than the amount invested in the derivative itself. The use of derivative instruments also exposes the Fund to additional risks and transaction costs. These instruments come in many varieties and have a wide range of potential risks and rewards, and may include, as further described in the section entitled “Principal Investment Strategies of the Fund,” futures contracts and swaps. A risk of the Fund’s use of derivatives is that the fluctuations in their values may not correlate perfectly with the overall securities markets. Additionally, to the extent the Fund is required to segregate or “set aside” (often referred to as “asset segregation”) liquid assets or otherwise cover open positions with respect to certain derivative instruments, the Fund may be required to sell portfolio instruments to meet these asset segregation requirements. There is a possibility that segregation involving a large percentage of the Fund’s assets could impede portfolio management or the Fund’s ability to meet redemption requests or other current obligations.

Futures Contract Risk: The successful use of futures contracts draws upon the *Adviser’s* skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of futures contracts, which may adversely affect the Fund’s *NAV* and *total return*, are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the futures contract; (b) possible lack of a liquid secondary market for a futures contract and the resulting inability to close a futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the *Adviser’s* inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

High Portfolio Turnover Risk: The investment techniques and strategies utilized by the Fund, including investments made on a shorter-term basis or in derivative instruments or instruments with a maturity of one year or less at the time of acquisition, may result in frequent portfolio trading and high portfolio turnover. High portfolio turnover rates will cause the Fund to incur higher levels of brokerage fees and commissions, which may reduce performance, and may cause higher levels of current tax liability to shareholders in the Fund.

Investment in Other Investment Companies Risk: As with other investments, investments in other investment companies, including exchange-traded funds (“ETFs”), are subject to market and manager risk. In addition, if the Fund acquires shares of investment companies, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies. The Fund may invest in money market *mutual funds*. An investment in a money market *mutual fund* is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Although money market *mutual funds* that invest in U.S. government securities seek to preserve the value of the Fund’s investment at \$1.00 per share, it is possible to lose money by investing in a stable *NAV* money market *mutual fund*. Moreover, recent SEC rule amendments require prime money market *mutual funds* to use floating *NAVs* that do not preserve the value of the Fund’s investment at \$1.00 per share. These rule amendments may impact the Fund’s use of prime money market *mutual funds* for capital preservation purposes.

Manager Risk: If the *Adviser* makes poor investment decisions, it will negatively affect the Fund’s investment performance.

Market Risk: Market risk is the risk that the markets on which the Fund’s investments trade will increase or decrease in value. Prices may fluctuate widely over short or extended periods in response to company, market or economic news. Markets also tend to move in cycles, with periods of rising and falling prices. If there is a general decline in the securities and other markets, your investment in the Fund may lose value, regardless of the individual results of the securities and other instruments in which the Fund invests.

Model and Data Risk: Given the complexity of the investments and strategies of the Fund, the *Adviser* relies heavily on quantitative models and information and data supplied by third parties (“Models and Data”). Models and Data are used to construct sets of transactions and investments, to provide risk management insights, and to assist in hedging the Fund’s investments.

When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon expose the Fund to potential risks. Similarly, any hedging based on faulty Models and Data may prove to be unsuccessful. Some of the models used by the *Adviser* for the Fund are predictive in nature. The use of predictive models has inherent risks. Because predictive models are usually constructed based on historical data supplied by third parties, the success of relying on such models may depend heavily on the accuracy and reliability of the supplied historical data. The Fund bears the risk that the quantitative models used by the *Adviser* will not be successful in selecting companies for investment or in determining the weighting of investment positions that will enable the Fund to achieve its investment objective.

All models rely on correct market data inputs. If incorrect market data is entered into even a well-founded model, the resulting information will be incorrect. However, even if market data is input correctly, “model prices” will often differ substantially from market prices, especially for instruments with complex characteristics, such as derivative instruments.

Momentum Style Risk: Investing in or having exposure to securities with positive *momentum* entails investing in securities that have had above-average recent returns. These securities may be more volatile than a broad cross-section of securities. In addition, there may be periods during which the investment performance of the Fund while using a *momentum* strategy may suffer.

Securities Lending Risk: The Fund’s risk in lending portfolio securities, as with other extensions of credit, consists of the possibility of loss to the Fund due to (i) the inability of the borrower to return the securities, (ii) a delay in receiving additional collateral to adequately cover any fluctuations in the value of securities on loan, (iii) a delay in recovery of the securities, or (iv) the loss of rights in the collateral should the borrower fail financially. In addition, the Fund is responsible for any loss that might result from its investment of the borrower’s collateral.

Small-Cap Securities Risk: Investments in or exposure to the securities of companies with smaller market capitalizations involve higher risks in some respects than do investments in securities of larger companies. For example, prices of such securities are often more volatile than prices of large capitalization securities. In addition, due to thin trading in some such securities, an investment in these securities may be more illiquid (*i.e.*, harder to sell) than that of larger capitalization securities. Smaller capitalization companies also fail more often than larger companies and may have more limited management and financial resources than larger companies.

Tax-Managed Investment Risk: The performance of the Fund may deviate from that of non-tax managed funds and may not provide as high a return before consideration of federal income tax consequences as non-tax managed funds. The Fund’s tax-sensitive investment strategy involves active management with the intent of minimizing the amount of realized gains from the sale of securities; however, market conditions may limit the Fund’s ability to execute such strategy. The Fund’s ability to utilize various tax-management techniques may be curtailed or eliminated in the future by tax legislation or regulation. Although the Fund expects that a smaller portion of its *total return* will consist of taxable distributions to shareholders as compared to non-tax managed funds, there can be no assurance about the size of taxable distributions to shareholders.

Performance Information

The performance information below shows summary performance information for the Fund in a bar chart and an average annual *total returns* table. The information shows you how the Fund’s performance has varied year by year and provides some indication of the risks of investing in the Fund. Effective April 1, 2015, the *Board of Trustees* of the *Trust* approved the reclassification of Class L Shares of the Fund as Class I Shares. Prior to April 1, 2015, the performance for the Class I Shares reflects the performance of the share class when it was classified as the Class L Shares of the Fund.

The Fund’s past performance (before and after taxes), as provided by the bar chart and performance table that follows, is not an indication of future results. Updated information on the Fund’s performance, including its current NAV per share, can be obtained by visiting <https://funds.aqr.com>.

Class I Shares—Total Returns

The bar chart below provides an illustration of how the Fund’s performance has varied in each of the indicated calendar years.

Highest Quarterly Return

14.44% (1Q13)

Lowest Quarterly Return

-10.87% (3Q15)

Average Annual Total Returns as of December 31, 2017

The following table compares the Fund's average annual *total returns* for Class I Shares and Class N Shares as of December 31, 2017 to the *Russell 2000*[®] *Index*. You cannot invest directly in an index. The table includes all applicable fees and sales charges.

	One Year	Five Year	Since Inception
AQR TM Small Cap Momentum Style Fund— Class I*			
Return Before Taxes	16.69%	13.56%	13.64%
Return After Taxes on Distributions	16.60%	13.13%	13.23%
Return After Taxes on Distributions and Sale of Fund Shares	9.52%	10.77%	10.96%
<i>Russell 2000</i> [®] <i>Index</i> (reflects no deductions for fees, expenses or taxes)	14.65%	14.12%	13.21%
AQR TM Small Cap Momentum Style Fund— Class N*			
Return Before Taxes	16.41%	13.29%	13.67%
<i>Russell 2000</i> [®] <i>Index</i> (reflects no deductions for fees, expenses or taxes)	14.65%	14.12%	14.41%

* The inception dates for the Class I Shares and Class N Shares were January 27, 2012 and December 17, 2012, respectively.

After-tax returns are calculated using the historical highest individual marginal tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns are not relevant to investors who hold their Fund shares through tax-deferred arrangements such as 401(k) plans or individual retirement accounts. After-tax returns are for Class I Shares only. After-tax returns for other classes will vary.

Investment Manager

The Fund's investment manager is AQR Capital Management, LLC.

Portfolio Managers

AQR TM International Momentum Style Fund

Fund Summary — January 29, 2018

Investment Objective

The AQR TM International Momentum Style Fund (the “Fund”) seeks long-term after-tax capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

	Class I	Class N
Management Fee	0.40%	0.40%
Distribution (12b-1) Fee	None	0.25%
Other Expenses	0.34%	0.30%
Acquired Fund Fees and Expenses	0.01%	0.01%
Total Annual Fund Operating Expenses	0.75%	0.96%
Less: Fee Waivers and/or Expense Reimbursements ¹	0.19%	0.15%
Total Annual Fund Operating Expenses after Fee Waivers and/or Expense Reimbursements	0.56%	0.81%

¹ The *Adviser* has contractually agreed to waive its management fee and/or to reimburse expenses of the Fund to the extent necessary to maintain the total annual fund operating expenses (excluding interest, taxes, dividends on short sales, borrowing costs, acquired fund fees and expenses, interest expense relating to short sales, expenses related to class action claims and extraordinary expenses) at no more than 0.55% for Class I Shares and 0.80% for Class N Shares (the “Fee Waiver Agreement”). This arrangement will continue at least through January 28, 2019. The Fee Waiver Agreement may only be terminated with the consent of the *Board of Trustees*, including a majority of the Trustees of the *Trust* who are not “interested persons” of the *Trust* within the meaning of the *1940 Act*. The *Adviser* is entitled to recapture the fees waived and/or expenses reimbursed, only to the extent that the recapture can be made during the thirty-six months following the end of the month during which the *Adviser* waived fees or reimbursed expenses. In no case will the *Adviser* recapture any amount that would cause the aggregate operating expenses of the Fund attributable to a share class during a year in which a repayment is made to exceed the lesser of (i) the applicable limits in effect at the time of the waiver and/or reimbursement, or (ii) the applicable limits in effect at the time of recapture.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other *mutual funds*. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same and takes into account the effect of the Fee Waiver Agreement through January 28, 2019, as discussed in Footnote No. 1 to the Fee Table. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class I Shares	\$57	\$221	\$398	\$ 913
Class N Shares	\$83	\$291	\$516	\$1,164

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. During the fiscal year ended September 30, 2017, the Fund’s portfolio turnover rate was 62% of the average value of its portfolio.

Principal Investment Strategies of the Fund

The Fund pursues a *momentum* investment style by investing primarily in equity or equity-related securities (including, but not limited to, exchange-traded funds, equity index futures, equity index swaps and depositary receipts) of non-U.S. companies that the *Adviser* determines to have positive *momentum*. The *Adviser* considers a security to have positive *momentum* primarily if it has outperformed other securities on a relative basis over a recent time period. Relative performance may be based on price *momentum*, earnings *momentum*, or other types of *momentum*, and will generally be measured over time periods ranging from one to twelve months. The criteria the *Adviser* uses for determining positive *momentum* may change from time to time. The “TM” in the Fund’s name reflects that the Fund employs a “tax management” strategy which considers the potential impact of federal income tax on shareholders’ investment return.

The Fund will generally invest in developed markets outside the U.S. As of the date of this prospectus, the *Adviser* considers developed markets outside of the U.S. to be those countries that are included in the *MSCI World ex-U.S. Index* at the time of purchase. Although the Fund does not limit its investments to any one country, the Fund may invest in any one country without limit.

The *Adviser* determines the weight of each security in the portfolio using a combination of the market capitalization of the security and the *Adviser's* determination of the attractiveness of the security based on the *Adviser's* assessment of the security's *momentum* and additional criteria that form part of the *Adviser's* security selection process.

When selecting securities for the portfolio, the *Adviser* also employs a tax management strategy which considers the potential impact of federal income tax on shareholders' investment return. This tax management strategy is generally designed so investors receive lower distributions of realized capital gains than funds that do not take tax consequences into account. Investors should not expect that there will be no capital gain distributions, however, as the Fund will balance investment considerations with tax consequences in making investment decisions. The techniques and strategies that may be used to attempt to reduce the impact of federal income tax on shareholders' investment returns include:

- when believed by the *Adviser* to be appropriate, selling stocks to realize losses, with the specific purpose of offsetting gains;
- deferring realizations of net capital gains;
- limiting portfolio turnover that may result in taxable gains; and
- choosing a tax accounting method that reduces tax liability: for example, using the highest-in, first-out (HIFO) method which sells tax lots of securities that have a higher tax basis before selling tax lots of securities that have a lower tax basis.

The *Adviser* believes that effective management of transaction costs is essential. Transaction costs include commissions, bid-ask spreads, market impact and time delays (the time between the investment decision and implementation, during which a market may move in favor of or against the Fund).

In order to manage transaction costs and minimize adverse tax consequences, the *Adviser* does not intend to rebalance the Fund's portfolio mechanically or to purchase and sell exclusively those securities defined by the eligibility criteria described above. The *Adviser* will seek to maintain flexibility to trade opportunistically in order to strike a balance between maintaining the desired exposure to positive *momentum* while attempting to keep transaction costs reasonably low and to minimize federal income taxes on returns.

The Fund invests significantly in common stocks. The Fund may also invest in or use financial futures contracts, forward foreign currency contracts and other types of equity-linked derivative instruments such as equity swaps and equity index swaps, as well as exchange-traded funds and similar pooled investment vehicles to gain exposure to the equity market and to maintain liquidity to pay for redemptions. A portion of the Fund's assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

To attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

Principal Risks of Investing in the Fund

Risk is inherent in all investing. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly from day to day and over time. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. ***The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.*** The following is a summary description of certain risks of investing in the Fund.

Common Stock Risk: The Fund may invest in, or have exposure to, common stocks. Common stocks are subject to greater fluctuations in market value than certain other asset classes as a result of such factors as a company's business performance, investor perceptions, stock market trends and general economic conditions.

Counterparty Risk: The Fund may enter into various types of derivative contracts. Many of these derivative contracts will be privately negotiated in the over-the-counter market. These contracts also involve exposure to credit risk, since contract performance depends in part on the financial condition of the counterparty. If a privately negotiated over-the-counter contract calls for payments by the Fund, the Fund must be prepared to make such payments when due. In addition, if a counterparty's creditworthiness declines, the Fund may not receive payments owed under the contract, or such payments may be delayed under such circumstances and the value of agreements with such counterparty can be expected to decline, potentially resulting in losses to the Fund.

Currency Risk: Currency risk is the risk that changes in currency exchange rates will negatively affect securities denominated in, and/or receiving revenues in, foreign currencies. The liquidity and trading value of foreign currencies could be affected by global economic factors, such as inflation, interest rate levels, and trade balances among countries, as well as the actions of sovereign governments and central banks. Adverse changes in currency exchange rates (relative to the U.S. dollar) may erode or reverse any potential gains from the Fund's investments in securities denominated in a foreign currency or may widen existing losses.

Derivatives Risk: In general, a derivative instrument typically involves leverage, *i.e.*, it provides exposure to potential gain or loss from a change in the level of the market price of the underlying security, currency or commodity (or a basket or index) in a notional amount that exceeds the amount of cash or assets required to establish or maintain the derivative instrument. Adverse changes in the value or level of the underlying asset or index, which the Fund may not directly own, can result in a loss to the Fund substantially greater than the amount invested in the derivative itself. The use of derivative instruments also exposes the Fund to additional risks and transaction costs. These instruments come in many varieties and have a wide range of potential risks and rewards, and may include, as further described in the section entitled "Principal Investment Strategies of the Fund," futures contracts, swaps and forward foreign currency contracts. A risk of the Fund's use of derivatives is that the fluctuations in their values may not correlate perfectly with the overall securities markets. Additionally, to the extent the Fund is required to segregate or "set aside" (often referred to as "asset segregation") liquid assets or otherwise cover open positions with respect to certain derivative instruments, the Fund may be required to sell portfolio instruments to meet these asset segregation requirements. There is a possibility that segregation involving a large percentage of the Fund's assets could impede portfolio management or the Fund's ability to meet redemption requests or other current obligations.

Foreign Investments Risk: Foreign investments often involve special risks not present in U.S. investments that can increase the chances that the Fund will lose money. These risks include:

- The Fund generally holds its foreign instruments and cash in foreign banks and securities depositories, which may be recently organized or new to the foreign custody business and may be subject to only limited or no regulatory oversight.
- Changes in foreign currency exchange rates can affect the value of the Fund's portfolio.
- The economies of certain foreign markets may not compare favorably with the economy of the United States with respect to such issues as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- The governments of certain countries may prohibit or impose substantial restrictions on foreign investments in their capital markets or in certain industries.
- Many foreign governments do not supervise and regulate stock exchanges, brokers and the sale of securities to the same extent as does the United States and may not have laws to protect investors that are comparable to U.S. securities laws.
- Settlement and clearance procedures in certain foreign markets may result in delays in payment for or delivery of securities not typically associated with settlement and clearance of U.S. investments.

Forward and Futures Contract Risk: The successful use of forward and futures contracts draws upon the *Adviser's* skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of forward and futures contracts, which may adversely affect the Fund's *NAV* and *total return*, are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the *Adviser's* inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

High Portfolio Turnover Risk: The investment techniques and strategies utilized by the Fund, including investments made on a shorter-term basis or in derivative instruments or instruments with a maturity of one year or less at the time of acquisition, may result in frequent portfolio trading and high portfolio turnover. High portfolio turnover rates will cause the Fund to incur higher levels of brokerage fees and commissions, which may reduce performance, and may cause higher levels of current tax liability to shareholders in the Fund.

Investment in Other Investment Companies Risk: As with other investments, investments in other investment companies, including exchange-traded funds ("ETFs"), are subject to market and manager risk. In addition, if the Fund acquires shares of investment companies, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies. The Fund may invest in money market *mutual funds*. An investment in a money market *mutual fund* is not insured or guaranteed by the

Federal Deposit Insurance Corporation or any other government agency. Although money market *mutual funds* that invest in U.S. government securities seek to preserve the value of the Fund's investment at \$1.00 per share, it is possible to lose money by investing in a stable NAV money market *mutual fund*. Moreover, recent SEC rule amendments require prime money market *mutual funds* to use floating NAVs that do not preserve the value of the Fund's investment at \$1.00 per share. These rule amendments may impact the Fund's use of prime money market *mutual funds* for capital preservation purposes.

Manager Risk: If the *Adviser* makes poor investment decisions, it will negatively affect the Fund's investment performance.

Market Risk: Market risk is the risk that the markets on which the Fund's investments trade will increase or decrease in value. Prices may fluctuate widely over short or extended periods in response to company, market or economic news. Markets also tend to move in cycles, with periods of rising and falling prices. If there is a general decline in the securities and other markets, your investment in the Fund may lose value, regardless of the individual results of the securities and other instruments in which the Fund invests.

Mid-Cap Securities Risk: The Fund may invest in, or have exposure to, the securities of mid-cap companies. The prices of securities of mid-cap companies generally are more volatile than those of large capitalization companies and are more likely to be adversely affected than large-cap companies by changes in earnings results and investor expectations or poor economic or market conditions, including those experienced during a recession.

Model and Data Risk: Given the complexity of the investments and strategies of the Fund, the *Adviser* relies heavily on quantitative models and information and data supplied by third parties ("Models and Data"). Models and Data are used to construct sets of transactions and investments, to provide risk management insights, and to assist in hedging the Fund's investments.

When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon expose the Fund to potential risks. Similarly, any hedging based on faulty Models and Data may prove to be unsuccessful. Some of the models used by the *Adviser* for the Fund are predictive in nature. The use of predictive models has inherent risks. Because predictive models are usually constructed based on historical data supplied by third parties, the success of relying on such models may depend heavily on the accuracy and reliability of the supplied historical data. The Fund bears the risk that the quantitative models used by the *Adviser* will not be successful in selecting companies for investment or in determining the weighting of investment positions that will enable the Fund to achieve its investment objective.

All models rely on correct market data inputs. If incorrect market data is entered into even a well-founded model, the resulting information will be incorrect. However, even if market data is input correctly, "model prices" will often differ substantially from market prices, especially for instruments with complex characteristics, such as derivative instruments.

Momentum Style Risk: Investing in or having exposure to securities with positive *momentum* entails investing in securities that have had above-average recent returns. These securities may be more volatile than a broad cross-section of securities. In addition, there may be periods during which the investment performance of the Fund while using a *momentum* strategy may suffer.

Securities Lending Risk: The Fund's risk in lending portfolio securities, as with other extensions of credit, consists of the possibility of loss to the Fund due to (i) the inability of the borrower to return the securities, (ii) a delay in receiving additional collateral to adequately cover any fluctuations in the value of securities on loan, (iii) a delay in recovery of the securities, or (iv) the loss of rights in the collateral should the borrower fail financially. In addition, the Fund is responsible for any loss that might result from its investment of the borrower's collateral.

Tax-Managed Investment Risk: The performance of the Fund may deviate from that of non-tax managed funds and may not provide as high a return before consideration of federal income tax consequences as non-tax managed funds. The Fund's tax-sensitive investment strategy involves active management with the intent of minimizing the amount of realized gains from the sale of securities; however, market conditions may limit the Fund's ability to execute such strategy. The Fund's ability to utilize various tax-management techniques may be curtailed or eliminated in the future by tax legislation or regulation. Although the Fund expects that a smaller portion of its *total return* will consist of taxable distributions to shareholders as compared to non-tax managed funds, there can be no assurance about the size of taxable distributions to shareholders.

Performance Information

The performance information below shows summary performance information for the Fund in a bar chart and an average annual *total returns* table. The information shows you how the Fund's performance has varied year by year and provides some indication of the risks of investing in the Fund. Effective April 1, 2015, the *Board of Trustees* of the *Trust* approved the reclassification of Class L Shares of the Fund as Class I Shares. Prior to April 1, 2015, the performance for the Class I Shares reflects the performance of the share class when it was classified as the Class L Shares of the Fund.

The Fund's past performance (before and after taxes), as provided by the bar chart and performance table that follows, is not an indication of future results. Updated information on the Fund's performance, including its current NAV per share, can be obtained by visiting <https://funds.aqr.com>.

Class I Shares—Total Returns

The bar chart below provides an illustration of how the Fund's performance has varied in each of the indicated calendar years.

Highest Quarterly Return

10.02% (3Q13)

Lowest Quarterly Return

-8.67% (3Q15)

Average Annual Total Returns as of December 31, 2017

The following table compares the Fund's average annual *total returns* for Class I Shares and Class N Shares as of December 31, 2017 to the *MSCI World ex-USA Index*. You cannot invest directly in an index. The table includes all applicable fees and sales charges.

	One Year	Five Year	Since Inception
AQR TM International Momentum Style Fund— Class I*			
Return Before Taxes	25.07%	6.43%	7.82%
Return After Taxes on Distributions	24.73%	6.07%	7.48%
Return After Taxes on Distributions and Sale of Fund Shares	14.77%	5.11%	6.29%
<i>MSCI World ex-USA Index</i> (reflects no deductions for fees, expenses or taxes)	24.21%	7.46%	7.94%
AQR TM International Momentum Style Fund— Class N*			
Return Before Taxes	24.83%	6.20%	6.34%
<i>MSCI World ex-USA Index</i> (reflects no deductions for fees, expenses or taxes)	24.21%	7.46%	7.57%

* The inception dates for the Class I Shares and Class N Shares were January 27, 2012 and December 17, 2012, respectively.

After-tax returns are calculated using the historical highest individual marginal tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns are not relevant to investors who hold their Fund shares through tax-deferred arrangements such as 401(k) plans or individual retirement accounts. After-tax returns are for Class I Shares only. After-tax returns for other classes will vary.

AQR Large Cap Defensive Style Fund

Fund Summary – January 29, 2018

Investment Objective

The AQR Large Cap Defensive Style Fund (the “Fund”) seeks total return.

Total return consists of capital appreciation and income.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

	Class I	Class N
Management Fee	0.25%	0.25%
Distribution (12b-1) Fee	None	0.25%
Other Expenses	0.16%	0.17%
Acquired Fund Fees and Expenses	0.01%	0.01%
Total Annual Fund Operating Expenses	0.42%	0.68%
Less: Fee Waivers and/or Expense Reimbursements ¹	0.01%	0.02%
Total Annual Fund Operating Expenses after Fee Waivers and/or Expense Reimbursements	0.41%	0.66%

¹ The *Adviser* has contractually agreed to waive its management fee and/or to reimburse expenses of the Fund to the extent necessary to maintain the total annual fund operating expenses (excluding interest, taxes, dividends on short sales, borrowing costs, acquired fund fees and expenses, interest expense relating to short sales, expenses related to class action claims and extraordinary expenses) at no more than 0.40% for Class I Shares and 0.65% for Class N Shares (the “Fee Waiver Agreement”). This arrangement will continue at least through January 28, 2019. The Fee Waiver Agreement may only be terminated with the consent of the *Board of Trustees*, including a majority of the Trustees of the *Trust* who are not “interested persons” of the *Trust* within the meaning of the *1940 Act*. The *Adviser* is entitled to recapture the fees waived and/or expenses reimbursed, only to the extent that the recapture can be made during the thirty-six months following the end of the month during which the *Adviser* waived fees or reimbursed expenses. In no case will the *Adviser* recapture any amount that would cause the aggregate operating expenses of the Fund attributable to a share class during a year in which a repayment is made to exceed the lesser of (i) the applicable limits in effect at the time of the waiver and/or reimbursement, or (ii) the applicable limits in effect at the time of recapture.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other *mutual funds*. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same and takes into account the effect of the Fee Waiver Agreement through January 28, 2019, as discussed in Footnote No. 1 to the Fee Table. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class I Shares	\$42	\$134	\$234	\$529
Class N Shares	\$67	\$216	\$377	\$845

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. During the fiscal year ended September 30, 2017, the Fund’s portfolio turnover rate was 16% of the average value of its portfolio.

Principal Investment Strategies of the Fund

The Fund pursues a “defensive” investment style, seeking to provide downside protection with upside potential through active stock selection, risk management and diversification.

The Fund pursues its objective by investing, under normal market conditions, at least 80% of its net assets (including any borrowings for investment purposes) in Equity Instruments of large-cap issuers. Equity Instruments include common stock, preferred stock, warrants, exchange-traded funds that invest in equity securities, stock index futures, depositary receipts and other derivative instruments where the reference asset is an equity security. As of the date of this prospectus, the *Adviser* generally considers large-cap issuers to be those issuers with market capitalizations within the range of the *Russell 1000*[®] *Index* at the time of purchase.

The Fund can invest in companies of any size and may invest in small- and mid-cap companies from time to time in the discretion of the *Adviser*. Pending investment in Equity Instruments of large-cap issuers or for use as collateral to meet margin requirements, the Fund may invest in short-term instruments, including U.S. Government securities, bank certificates of deposit, money market instruments or funds, and such other liquid investments deemed appropriate by the *Adviser*. The Fund may invest in these securities without limit for temporary defensive purposes. There is no guarantee that the Fund's objective will be met.

The Fund pursues a defensive investment style, meaning it seeks to participate in rising equity markets while mitigating downside risk in declining markets. In other words, the Fund expects to lag the performance of traditional U.S. equity funds when equity markets are rising, but to exceed the performance of traditional U.S. equity funds during equity market declines. To achieve this result, the Fund will be broadly diversified across companies and industries and will invest in companies that the *Adviser* has identified to have low measures of risk and high quality (e.g., stable companies in good business health). The *Adviser* believes that the stocks of these types of companies tend to be lower "beta" stocks and that lower "beta" stocks generally are less volatile than higher "beta" stocks (that is, their value has a lower sensitivity to fluctuations in the securities markets). The *Adviser* expects low "beta" and high quality stocks to produce higher risk-adjusted returns over a full market cycle than high "beta" or poor quality stocks.

The Fund is actively managed and the *Adviser* will vary the Fund's exposures to issuers and industries based on the *Adviser's* evaluation of investment opportunities. In constructing the portfolio, the *Adviser* uses quantitative models, which combine active management to identify quality companies and statistical measures of risk to assure diversification by issuer and industry, as well as additional criteria that form part of the *Adviser's* security selection process. The *Adviser* will use *volatility* and correlation forecasting and portfolio construction methodologies to manage the Fund. The *Adviser* utilizes quantitative risk models in furtherance of the Fund's investment objective, which seek to control portfolio level risk. Shifts in allocations among issuers and industries will be determined using the quantitative models based on the *Adviser's* determinations of risk and quality, as well as other factors including, but not limited to, managing industry and sector exposures. The Fund bears the risk that the quantitative models used by the portfolio managers will not be successful in forecasting market returns or in determining the weighting of investment positions that will enable the Fund to achieve its investment objective. In managing the Fund's portfolio, the *Adviser* may from time to time utilize certain tax management techniques which consider the potential impact of federal income tax on shareholders' investment return.

The Fund makes use of derivative instruments, which may be used for hedging purposes and to enhance returns. The Fund may use derivatives as a substitute for investing in conventional securities and for investment purposes to increase its economic exposure to a particular security, currency or index in a cost effective manner. The Fund's use of derivatives such as futures contracts and certain other Equity Instruments (that are derivative instruments) will have the economic effect of financial leverage. Financial leverage magnifies exposure to the swings in prices of an asset underlying an Equity Instrument and results in increased *volatility*, which means the Fund will have the potential for greater gains, as well as the potential for greater losses, than if the Fund does not use Equity Instruments that have a leveraging effect. Leveraging tends to magnify, sometimes significantly, the effect of any increase or decrease in the Fund's exposure to an asset and may cause the Fund's NAV to be volatile. For example, if the *Adviser* seeks to gain enhanced exposure to a specific asset through an Equity Instrument providing leveraged exposure to the asset and that Equity Instrument increases in value, the gain to the Fund will be magnified; however, if that investment decreases in value, the loss to the Fund will be magnified. A decline in the Fund's assets due to losses magnified by the Equity Instruments providing leveraged exposure may require the Fund to liquidate portfolio positions to satisfy its obligations, to meet redemption requests or to meet asset segregation requirements when it may not be advantageous to do so. There is no assurance that the Fund's use of Equity Instruments providing enhanced exposure will enable the Fund to achieve its investment objective. In addition, to attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

The *Adviser* utilizes portfolio optimization techniques to determine trading activity, taking into account the transaction costs associated with trading each Equity Instrument. The Fund employs sophisticated proprietary trading techniques in an effort to mitigate trading costs and execution impact on the Fund.

Principal Risks of Investing in the Fund

Risk is inherent in all investing. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly from day to day and over time. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. ***The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.*** The following is a summary description of certain risks of investing in the Fund.

Common Stock Risk: The Fund may invest in, or have exposure to, common stocks. Common stocks are subject to greater fluctuations in market value than certain other asset classes as a result of such factors as a company's business performance, investor perceptions, stock market trends and general economic conditions.

Counterparty Risk: The Fund may enter into various types of derivative contracts. Many of these derivative contracts will be privately negotiated in the over-the-counter market. These contracts also involve exposure to credit risk, since contract performance depends in part on the financial condition of the counterparty. If a privately negotiated over-the-counter contract calls for payments by the Fund, the Fund must be prepared to make such payments when due. In addition, if a counterparty's creditworthiness declines, the Fund may not receive payments owed under the contract, or such payments may be delayed under such circumstances and the value of agreements with such counterparty can be expected to decline, potentially resulting in losses to the Fund.

Derivatives Risk: In general, a derivative instrument typically involves leverage, *i.e.*, it provides exposure to potential gain or loss from a change in the level of the market price of the underlying security, currency or commodity (or a basket or index) in a notional amount that exceeds the amount of cash or assets required to establish or maintain the derivative instrument. Adverse changes in the value or level of the underlying asset or index, which the Fund may not directly own, can result in a loss to the Fund substantially greater than the amount invested in the derivative itself. The use of derivative instruments also exposes the Fund to additional risks and transaction costs. These instruments come in many varieties and have a wide range of potential risks and rewards, and may include, as further described in the section entitled "Principal Investment Strategies of the Fund," futures contracts and other derivative instruments where the reference asset is an equity security. A risk of the Fund's use of derivatives is that the fluctuations in their values may not correlate perfectly with the overall securities markets. Additionally, to the extent the Fund is required to segregate or "set aside" (often referred to as "asset segregation") liquid assets or otherwise cover open positions with respect to certain derivative instruments, the Fund may be required to sell portfolio instruments to meet these asset segregation requirements. There is a possibility that segregation involving a large percentage of the Fund's assets could impede portfolio management or the Fund's ability to meet redemption requests or other current obligations.

Futures Contract Risk: The successful use of futures contracts draws upon the *Adviser's* skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of futures contracts, which may adversely affect the Fund's *NAV* and *total return*, are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the futures contract; (b) possible lack of a liquid secondary market for a futures contract and the resulting inability to close a futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the *Adviser's* inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

Hedging Transactions Risk: The *Adviser* from time to time employs various hedging techniques. The success of the Fund's hedging strategy will be subject to the *Adviser's* ability to correctly assess the degree of correlation between the performance of the instruments used in the hedging strategy and the performance of the investments in the portfolio being hedged. Since the characteristics of many securities change as markets change or time passes, the success of the Fund's hedging strategy will also be subject to the *Adviser's* ability to continually recalculate, readjust, and execute hedges in an efficient and timely manner. For a variety of reasons, the *Adviser* may not seek to establish a perfect correlation between such hedging instruments and the portfolio holdings being hedged. Such imperfect correlation may prevent the Fund from achieving the intended hedge or expose the Fund to risk of loss. In addition, it is not possible to hedge fully or perfectly against any risk, and hedging entails its own costs (such as trading commissions and fees).

Investment in Other Investment Companies Risk: As with other investments, investments in other investment companies, including exchange-traded funds ("ETFs"), are subject to market and manager risk. In addition, if the Fund acquires shares of investment companies, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies. The Fund may invest in money market *mutual funds*. An investment in a money market *mutual fund* is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Although money market *mutual funds* that invest in U.S. government securities seek to preserve the value of the Fund's investment at \$1.00 per share, it is possible to lose money by investing in a stable *NAV* money market *mutual fund*. Moreover, recent SEC rule amendments require prime money market *mutual funds* to use floating *NAVs* that do not preserve the value of the Fund's investment at \$1.00 per share. These rule amendments may impact the Fund's use of prime money market *mutual funds* for capital preservation purposes.

Leverage Risk: As part of the Fund's principal investment strategy, the Fund will make investments in futures contracts and other derivative instruments. These derivative instruments provide the economic effect of financial leverage by creating additional investment exposure to the underlying instrument, as well as the potential for greater loss. **If the Fund uses leverage through purchasing derivative instruments, the Fund has the risk of losses that exceed the net assets of the Fund.** The net asset value of the Fund while employing leverage will be more volatile and sensitive to market movements.

Manager Risk: If the *Adviser* makes poor investment decisions, it will negatively affect the Fund's investment performance.

Market Risk: Market risk is the risk that the markets on which the Fund's investments trade will increase or decrease in value. Prices may fluctuate widely over short or extended periods in response to company, market or economic news. Markets also tend to move in cycles, with periods of rising and falling prices. If there is a general decline in the securities and other markets, your investment in the Fund may lose value, regardless of the individual results of the securities and other instruments in which the Fund invests.

Mid-Cap Securities Risk: The Fund may invest in, or have exposure to, the securities of mid-cap companies. The prices of securities of mid-cap companies generally are more volatile than those of large capitalization companies and are more likely to be adversely affected than large-cap companies by changes in earnings results and investor expectations or poor economic or market conditions, including those experienced during a recession.

Model and Data Risk: Given the complexity of the investments and strategies of the Fund, the *Adviser* relies heavily on quantitative models and information and data supplied by third parties ("Models and Data"). Models and Data are used to construct sets of transactions and investments, to provide risk management insights, and to assist in hedging the Fund's investments.

When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon expose the Fund to potential risks. Similarly, any hedging based on faulty Models and Data may prove to be unsuccessful. Some of the models used by the *Adviser* for the Fund are predictive in nature. The use of predictive models has inherent risks. Because predictive models are usually constructed based on historical data supplied by third parties, the success of relying on such models may depend heavily on the accuracy and reliability of the supplied historical data. The Fund bears the risk that the quantitative models used by the *Adviser* will not be successful in selecting companies for investment or in determining the weighting of investment positions that will enable the Fund to achieve its investment objective.

All models rely on correct market data inputs. If incorrect market data is entered into even a well-founded model, the resulting information will be incorrect. However, even if market data is input correctly, "model prices" will often differ substantially from market prices, especially for instruments with complex characteristics, such as derivative instruments.

Securities Lending Risk: The Fund's risk in lending portfolio securities, as with other extensions of credit, consists of the possibility of loss to the Fund due to (i) the inability of the borrower to return the securities, (ii) a delay in receiving additional collateral to adequately cover any fluctuations in the value of securities on loan, (iii) a delay in recovery of the securities, or (iv) the loss of rights in the collateral should the borrower fail financially. In addition, the Fund is responsible for any loss that might result from its investment of the borrower's collateral.

Small-Cap Securities Risk: Investments in or exposure to the securities of companies with smaller market capitalizations involve higher risks in some respects than do investments in securities of larger companies. For example, prices of such securities are often more volatile than prices of large capitalization securities. In addition, due to thin trading in some such securities, an investment in these securities may be more illiquid (*i.e.*, harder to sell) than that of larger capitalization securities. Smaller capitalization companies also fail more often than larger companies and may have more limited management and financial resources than larger companies.

Volatility Risk: The Fund may have investments that appreciate or decrease significantly in value over short periods of time. This may cause the Fund's net asset value per share to experience significant increases or declines in value over short periods of time, however, all investments long- or short-term are subject to risk of loss.

Performance Information

The performance information below shows summary performance information for the Fund in a bar chart and an average annual *total returns* table. The information shows you how the Fund's performance has varied year by year and provides some indication of the risks of investing in the Fund.

The Fund's past performance (before and after taxes), as provided by the bar chart and performance table that follows, is not an indication of future results. Updated information on the Fund's performance, including its current NAV per share, can be obtained by visiting <https://funds.aqr.com>.

Class I Shares—Total Returns

The bar chart below provides an illustration of how the Fund's performance has varied in each of the indicated calendar years.

Highest Quarterly Return

12.40% (1Q13)

Lowest Quarterly Return

-1.41% (3Q15)

Average Annual Total Returns as of December 31, 2017

The following table compares the Fund's average annual *total returns* for Class I Shares and Class N Shares as of December 31, 2017 to the *Russell 1000® Index*. You cannot invest directly in an index. The table includes all applicable fees and sales charges.

	One Year	Five Year	Since Inception (July 9, 2012)
AQR Large Cap Defensive Style Fund—Class I			
Return Before Taxes	22.15%	17.12%	16.00%
Return After Taxes on Distributions	21.47%	16.17%	15.11%
Return After Taxes on Distributions and Sale of Fund Shares	13.08%	13.65%	12.79%
AQR Large Cap Defensive Style Fund— Class N			
Return Before Taxes	21.76%	16.83%	15.71%
<i>Russell 1000® Index</i> (reflects no deductions for fees, expenses or taxes)	21.69%	15.71%	15.66%

After-tax returns are calculated using the historical highest individual marginal tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns are not relevant to investors who hold their Fund shares through tax-deferred arrangements such as 401(k) plans or individual retirement accounts. After-tax returns are for Class I Shares only. After-tax returns for other classes will vary.

Investment Manager

The Fund's investment manager is AQR Capital Management, LLC.

Portfolio Managers

Name	Portfolio Manager of the Fund Since	Title

AQR International Defensive Style Fund

Fund Summary – January 29, 2018

Investment Objective

The AQR International Defensive Style Fund (the “Fund”) seeks total return. Total return consists of capital appreciation and income.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

	Class I	Class N
Management Fee	0.40%	0.40%
Distribution (12b-1) Fee	None	0.25%
Other Expenses	0.27%	0.27%
Acquired Fund Fees and Expenses	0.01%	0.01%
Total Annual Fund Operating Expenses	0.68%	0.93%
Less: Fee Waivers and/or Expense Reimbursements ¹	0.12%	0.12%
Total Annual Fund Operating Expenses after Fee Waivers and/or Expense Reimbursements	0.56%	0.81%

¹ The *Adviser* has contractually agreed to waive its management fee and/or to reimburse expenses of the Fund to the extent necessary to maintain the total annual fund operating expenses (excluding interest, taxes, dividends on short sales, borrowing costs, acquired fund fees and expenses, interest expense relating to short sales, expenses related to class action claims and extraordinary expenses) at no more than 0.55% for Class I Shares and 0.80% for Class N Shares (the “Fee Waiver Agreement”). This arrangement will continue at least through January 28, 2019. The Fee Waiver Agreement may only be terminated with the consent of the *Board of Trustees*, including a majority of the Trustees of the *Trust* who are not “interested persons” of the *Trust* within the meaning of the *1940 Act*. The *Adviser* is entitled to recapture the fees waived and/or expenses reimbursed, only to the extent that the recapture can be made during the thirty-six months following the end of the month during which the *Adviser* waived fees or reimbursed expenses. In no case will the *Adviser* recapture any amount that would cause the aggregate operating expenses of the Fund attributable to a share class during a year in which a repayment is made to exceed the lesser of (i) the applicable limits in effect at the time of the waiver and/or reimbursement, or (ii) the applicable limits in effect at the time of recapture.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other *mutual funds*. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same and takes into account the effect of the Fee Waiver Agreement through January 28, 2019, as discussed in Footnote No. 1 to the Fee Table. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class I Shares	\$57	\$205	\$367	\$ 835
Class N Shares	\$83	\$284	\$503	\$1,132

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. During the fiscal year ended September 30, 2017, the Fund’s portfolio turnover rate was 3% of the average value of its portfolio.

Principal Investment Strategies of the Fund

The Fund pursues a “defensive” investment style, seeking to provide downside protection with upside potential through active stock selection, risk management and diversification.

The Fund pursues its objective by investing, under normal market conditions, at least 80% of its net assets (including any borrowings for investment purposes) in Equity Instruments of International Issuers. Equity Instruments include common stock, preferred stock, warrants, exchange-traded funds that invest in equity securities, stock index futures, depositary receipts and other derivative instruments where the reference asset is an equity security. An issuer will be considered an International Issuer if it is organized, domiciled, or has a principal place of business in a country that is part of the *MSCI World ex-USA Index*, or if an instrument provides exposure to the change in value of a company that meets that definition. However, the Fund may also invest in issuers organized, domiciled, or with a principal place of business in other countries if the *Adviser* considers it advisable to achieve the Fund’s investment objective. The Fund

can invest in companies of any size and may invest to a significant extent in small- and mid-cap companies from time to time in the discretion of the *Adviser*. Pending investment in Equity Instruments of International Issuers or for use as collateral to meet margin requirements, the Fund may invest in short-term instruments, including U.S. Government securities, bank certificates of deposit, money market instruments or funds, and such other liquid investments deemed appropriate by the *Adviser*. The Fund may invest in these securities without limit for temporary defensive purposes. There is no guarantee that the Fund's objective will be met.

The Fund also engages in currency transactions with counterparties primarily in order to hedge against a decline in the value of portfolio holdings denominated in particular currencies and to provide temporary exposure to a particular currency in lieu of leaving cash inflows uninvested. Currency transactions include forward currency contracts and exchange listed currency futures. A forward currency contract involves a privately negotiated obligation to purchase or sell (with delivery generally required) a specific currency at a future date, which may be any fixed number of days from the date of the contract agreed upon by the parties, at a price set at the time of the contract. The Fund seeks to diversify currency exposures and to avoid the risk of high exposures to any one currency, including U.S. dollars.

The Fund pursues a defensive investment style, meaning it seeks to participate in rising equity markets while mitigating downside risk in declining markets. In other words, the Fund expects to lag the performance of traditional international equity funds when these markets are rising, but to exceed the performance of traditional international equity funds during international equity market declines. To achieve this result, the Fund will be broadly diversified across companies, industries and countries and will invest in companies that the *Adviser* has identified to have low measures of risk and high quality (e.g., stable companies in good business health). The *Adviser* believes that the stocks of these types of companies tend to be lower "beta" stocks and that lower "beta" stocks generally are less volatile than higher "beta" stocks (that is, their value has a lower sensitivity to fluctuations in the securities markets). The *Adviser* expects low "beta" and high quality stocks to produce higher risk-adjusted returns over a full market cycle than high "beta" or poor quality stocks.

The Fund is actively managed and the *Adviser* will vary the Fund's exposures to issuers, industries, countries and currencies based on the *Adviser's* evaluation of investment opportunities within and across markets. In constructing the portfolio, the *Adviser* uses quantitative models, which combine active management to identify quality companies and statistical measures of risk to assure diversification by issuer, country, currency and industry, as well as additional criteria that form part of the *Adviser's* security selection process. The *Adviser* will use *volatility* and correlation forecasting and portfolio construction methodologies to manage the Fund. The *Adviser* utilizes quantitative risk models in furtherance of the Fund's investment objective, which seek to control portfolio level risk. Shifts in allocations among issuers, industries, countries or currencies will be determined using the quantitative models based on the *Adviser's* determinations of risk and quality, as well as other factors including, but not limited to, managing industry and sector exposures. The Fund bears the risk that the quantitative models used by the portfolio managers will not be successful in forecasting market returns or in determining the weighting of investment positions that will enable the Fund to achieve its investment objective. In managing the Fund's portfolio, the *Adviser* may from time to time utilize certain tax management techniques which consider the potential impact of federal income tax on shareholders' investment return.

The Fund makes use of derivative instruments, which may be used for hedging purposes and to enhance returns. The Fund may use derivatives as a substitute for investing in conventional securities and for investment purposes to increase its economic exposure to a particular security, currency or index in a cost effective manner. The Fund's use of derivatives such as futures contracts, forward contracts and certain other Equity Instruments (that are derivative instruments) will have the economic effect of financial leverage. Financial leverage magnifies exposure to the swings in prices of an asset underlying an Equity Instrument and results in increased *volatility*, which means the Fund will have the potential for greater gains, as well as the potential for greater losses, than if the Fund does not use Equity Instruments that have a leveraging effect. Leveraging tends to magnify, sometimes significantly, the effect of any increase or decrease in the Fund's exposure to an asset and may cause the Fund's NAV to be volatile. For example, if the *Adviser* seeks to gain enhanced exposure to a specific asset through an Equity Instrument providing leveraged exposure to the asset and that Equity Instrument increases in value, the gain to the Fund will be magnified; however, if that investment decreases in value, the loss to the Fund will be magnified. A decline in the Fund's assets due to losses magnified by the Equity Instruments providing leveraged exposure may require the Fund to liquidate portfolio positions to satisfy its obligations, to meet redemption requests or to meet asset segregation requirements when it may not be advantageous to do so. There is no assurance that the Fund's use of Equity Instruments providing enhanced exposure will enable the Fund to achieve its investment objective. In addition, to attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

The *Adviser* utilizes portfolio optimization techniques to determine trading activity, taking into account the transaction costs associated with trading each Equity Instrument. The Fund employs sophisticated proprietary trading techniques in an effort to mitigate trading costs and execution impact on the Fund.

Principal Risks of Investing in the Fund

Risk is inherent in all investing. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly from day to day and over time. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. ***The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.*** The following is a summary description of certain risks of investing in the Fund.

Common Stock Risk: The Fund may invest in, or have exposure to, common stocks. Common stocks are subject to greater fluctuations in market value than certain other asset classes as a result of such factors as a company's business performance, investor perceptions, stock market trends and general economic conditions.

Counterparty Risk: The Fund may enter into various types of derivative contracts. Many of these derivative contracts will be privately negotiated in the over-the-counter market. These contracts also involve exposure to credit risk, since contract performance depends in part on the financial condition of the counterparty. If a privately negotiated over-the-counter contract calls for payments by the Fund, the Fund must be prepared to make such payments when due. In addition, if a counterparty's creditworthiness declines, the Fund may not receive payments owed under the contract, or such payments may be delayed under such circumstances and the value of agreements with such counterparty can be expected to decline, potentially resulting in losses to the Fund.

Currency Risk: Currency risk is the risk that changes in currency exchange rates will negatively affect securities denominated in, and/or receiving revenues in, foreign currencies. The liquidity and trading value of foreign currencies could be affected by global economic factors, such as inflation, interest rate levels, and trade balances among countries, as well as the actions of sovereign governments and central banks. Adverse changes in currency exchange rates (relative to the U.S. dollar) may erode or reverse any potential gains from the Fund's investments in securities denominated in a foreign currency or may widen existing losses.

Derivatives Risk: In general, a derivative instrument typically involves leverage, *i.e.*, it provides exposure to potential gain or loss from a change in the level of the market price of the underlying security, currency or commodity (or a basket or index) in a notional amount that exceeds the amount of cash or assets required to establish or maintain the derivative instrument. Adverse changes in the value or level of the underlying asset or index, which the Fund may not directly own, can result in a loss to the Fund substantially greater than the amount invested in the derivative itself. The use of derivative instruments also exposes the Fund to additional risks and transaction costs. These instruments come in many varieties and have a wide range of potential risks and rewards, and may include, as further described in the section entitled "Principal Investment Strategies of the Fund," futures contracts, forward contracts and other derivative instruments where the reference asset is an equity security. A risk of the Fund's use of derivatives is that the fluctuations in their values may not correlate perfectly with the overall securities markets. Additionally, to the extent the Fund is required to segregate or "set aside" (often referred to as "asset segregation") liquid assets or otherwise cover open positions with respect to certain derivative instruments, the Fund may be required to sell portfolio instruments to meet these asset segregation requirements. There is a possibility that segregation involving a large percentage of the Fund's assets could impede portfolio management or the Fund's ability to meet redemption requests or other current obligations.

Foreign Investments Risk: Foreign investments often involve special risks not present in U.S. investments that can increase the chances that the Fund will lose money. These risks include:

- The Fund generally holds its foreign instruments and cash in foreign banks and securities depositories, which may be recently organized or new to the foreign custody business and may be subject to only limited or no regulatory oversight.
- Changes in foreign currency exchange rates can affect the value of the Fund's portfolio.
- The economies of certain foreign markets may not compare favorably with the economy of the United States with respect to such issues as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- The governments of certain countries may prohibit or impose substantial restrictions on foreign investments in their capital markets or in certain industries.
- Many foreign governments do not supervise and regulate stock exchanges, brokers and the sale of securities to the same extent as does the United States and may not have laws to protect investors that are comparable to U.S. securities laws.
- Settlement and clearance procedures in certain foreign markets may result in delays in payment for or delivery of securities not typically associated with settlement and clearance of U.S. investments.

Forward and Futures Contract Risk: The successful use of forward and futures contracts draws upon the *Adviser's* skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of forward and futures contracts, which may adversely affect the Fund's *NAV* and *total return*, are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the *Adviser's* inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

Hedging Transactions Risk: The *Adviser* from time to time employs various hedging techniques. The success of the Fund's hedging strategy will be subject to the *Adviser's* ability to correctly assess the degree of correlation between the performance of the instruments used in the hedging strategy and the performance of the investments in the portfolio being hedged. Since the characteristics of many securities change as markets change or time passes, the success of the Fund's hedging strategy will also be subject to the *Adviser's* ability to continually recalculate, readjust, and execute hedges in an efficient and timely manner. For a variety of reasons, the *Adviser* may not seek to establish a perfect correlation between such hedging instruments and the portfolio holdings being hedged. Such imperfect correlation may prevent the Fund from achieving the intended hedge or expose the Fund to risk of loss. In addition, it is not possible to hedge fully or perfectly against any risk, and hedging entails its own costs (such as trading commissions and fees).

Investment in Other Investment Companies Risk: As with other investments, investments in other investment companies, including exchange-traded funds ("ETFs"), are subject to market and manager risk. In addition, if the Fund acquires shares of investment companies, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies. The Fund may invest in money market *mutual funds*. An investment in a money market *mutual fund* is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Although money market *mutual funds* that invest in U.S. government securities seek to preserve the value of the Fund's investment at \$1.00 per share, it is possible to lose money by investing in a stable *NAV* money market *mutual fund*. Moreover, recent SEC rule amendments require prime money market *mutual funds* to use floating *NAVs* that do not preserve the value of the Fund's investment at \$1.00 per share. These rule amendments may impact the Fund's use of prime money market *mutual funds* for capital preservation purposes.

Leverage Risk: As part of the Fund's principal investment strategy, the Fund will make investments in futures contracts, forward contracts and other derivative instruments. These derivative instruments provide the economic effect of financial leverage by creating additional investment exposure to the underlying instrument, as well as the potential for greater loss. **If the Fund uses leverage through purchasing derivative instruments, the Fund has the risk of losses that exceed the net assets of the Fund.** The net asset value of the Fund while employing leverage will be more volatile and sensitive to market movements.

Manager Risk: If the *Adviser* makes poor investment decisions, it will negatively affect the Fund's investment performance.

Market Risk: Market risk is the risk that the markets on which the Fund's investments trade will increase or decrease in value. Prices may fluctuate widely over short or extended periods in response to company, market or economic news. Markets also tend to move in cycles, with periods of rising and falling prices. If there is a general decline in the securities and other markets, your investment in the Fund may lose value, regardless of the individual results of the securities and other instruments in which the Fund invests.

Mid-Cap Securities Risk: The Fund may invest in, or have exposure to, the securities of mid-cap companies. The prices of securities of mid-cap companies generally are more volatile than those of large capitalization companies and are more likely to be adversely affected than large-cap companies by changes in earnings results and investor expectations or poor economic or market conditions, including those experienced during a recession.

Model and Data Risk: Given the complexity of the investments and strategies of the Fund, the *Adviser* relies heavily on quantitative models and information and data supplied by third parties ("Models and Data"). Models and Data are used to construct sets of transactions and investments, to provide risk management insights, and to assist in hedging the Fund's investments.

When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon expose the Fund to potential risks. Similarly, any hedging based on faulty Models and Data may prove to be unsuccessful. Some of the models used by the *Adviser* for the Fund are predictive in nature. The use of predictive models has inherent risks. Because predictive models are usually constructed based on historical data supplied by third parties, the success of

relying on such models may depend heavily on the accuracy and reliability of the supplied historical data. The Fund bears the risk that the quantitative models used by the *Adviser* will not be successful in selecting companies for investment or in determining the weighting of investment positions that will enable the Fund to achieve its investment objective.

All models rely on correct market data inputs. If incorrect market data is entered into even a well-founded model, the resulting information will be incorrect. However, even if market data is input correctly, “model prices” will often differ substantially from market prices, especially for instruments with complex characteristics, such as derivative instruments.

Securities Lending Risk: The Fund’s risk in lending portfolio securities, as with other extensions of credit, consists of the possibility of loss to the Fund due to (i) the inability of the borrower to return the securities, (ii) a delay in receiving additional collateral to adequately cover any fluctuations in the value of securities on loan, (iii) a delay in recovery of the securities, or (iv) the loss of rights in the collateral should the borrower fail financially. In addition, the Fund is responsible for any loss that might result from its investment of the borrower’s collateral.

Small-Cap Securities Risk: Investments in or exposure to the securities of companies with smaller market capitalizations involve higher risks in some respects than do investments in securities of larger companies. For example, prices of such securities are often more volatile than prices of large capitalization securities. In addition, due to thin trading in some such securities, an investment in these securities may be more illiquid (*i.e.*, harder to sell) than that of larger capitalization securities. Smaller capitalization companies also fail more often than larger companies and may have more limited management and financial resources than larger companies.

Volatility Risk: The Fund may have investments that appreciate or decrease significantly in value over short periods of time. This may cause the Fund’s net asset value per share to experience significant increases or declines in value over short periods of time, however, all investments long- or short-term are subject to risk of loss.

Performance Information

The performance information below shows summary performance information for the Fund in a bar chart and an average annual *total returns* table. The information shows you how the Fund’s performance has varied year by year and provides some indication of the risks of investing in the Fund.

The Fund’s past performance (before and after taxes), as provided by the bar chart and performance table that follows, is not an indication of future results. Updated information on the Fund’s performance, including its current NAV per share, can be obtained by visiting <https://funds.aqr.com>.

Class I Shares—Total Returns

The bar chart below provides an illustration of how the Fund’s performance has varied in each of the indicated calendar years.

Highest Quarterly Return

7.90% (3Q13)

Lowest Quarterly Return

-6.89% (3Q15)

Average Annual Total Returns as of December 31, 2017

The following table compares the Fund's average annual *total returns* for Class I Shares and Class N Shares as of December 31, 2017 to the *MSCI World ex-USA Index*. You cannot invest directly in an index. The table includes all applicable fees and sales charges.

	One Year	Five Year	Since Inception (July 9, 2012)
AQR International Defensive Style Fund— Class I			
Return Before Taxes	21.60%	7.52%	8.29%
Return After Taxes on Distributions	21.12%	6.94%	7.74%
Return After Taxes on Distributions and Sale of Fund Shares	12.92%	5.92%	6.58%
AQR International Defensive Style Fund— Class N			
Return Before Taxes	21.40%	7.24%	8.02%
<i>MSCI World ex-USA Index</i> (reflects no deductions for fees, expenses or taxes)	24.21%	7.46%	9.55%

After-tax returns are calculated using the historical highest individual marginal tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns are not relevant to investors who hold their Fund shares through tax-deferred arrangements such as 401(k) plans or individual retirement accounts. After-tax returns are for Class I Shares only. After-tax returns for other classes will vary.

Investment Manager

AQR Emerging Defensive Style Fund

Fund Summary – January 29, 2018

Investment Objective

The AQR Emerging Defensive Style Fund (the “Fund”) seeks total return. Total return consists of capital appreciation and income.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

	Class I	Class N
Management Fee	0.55%	0.55%
Distribution (12b-1) Fee	None	0.25%
Other Expenses	0.52%	0.48%
Acquired Fund Fees and Expenses	0.01%	0.01%
Total Annual Fund Operating Expenses	1.08%	1.29%
Less: Fee Waivers and/or Expense Reimbursements ¹	0.37%	0.33%
Total Annual Fund Operating Expenses after Fee Waivers and/or Expense Reimbursements	0.71%	0.96%

¹ The *Adviser* has contractually agreed to waive its management fee and/or to reimburse expenses of the Fund to the extent necessary to maintain the total annual fund operating expenses (excluding interest, taxes, dividends on short sales, borrowing costs, acquired fund fees and expenses, interest expense relating to short sales, expenses related to class action claims and extraordinary expenses) at no more than 0.70% for Class I Shares and 0.95% for Class N Shares (the “Fee Waiver Agreement”). This arrangement will continue at least through January 28, 2019. The Fee Waiver Agreement may only be terminated with the consent of the *Board of Trustees*, including a majority of the Trustees of the *Trust* who are not “interested persons” of the *Trust* within the meaning of the *1940 Act*. The *Adviser* is entitled to recapture the fees waived and/or expenses reimbursed, only to the extent that the recapture can be made during the thirty-six months following the end of the month during which the *Adviser* waived fees or reimbursed expenses. In no case will the *Adviser* recapture any amount that would cause the aggregate operating expenses of the Fund attributable to a share class during a year in which a repayment is made to exceed the lesser of (i) the applicable limits in effect at the time of the waiver and/or reimbursement, or (ii) the applicable limits in effect at the time of recapture.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other *mutual funds*. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same and takes into account the effect of the Fee Waiver Agreement through January 28, 2019, as discussed in Footnote No. 1 to the Fee Table. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class I Shares	\$73	\$307	\$560	\$1,284
Class N Shares	\$98	\$376	\$676	\$1,528

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. During the fiscal year ended September 30, 2017, the Fund’s portfolio turnover rate was 17% of the average value of its portfolio.

Principal Investment Strategies of the Fund

The Fund pursues a “defensive” investment style, seeking to provide downside protection with upside potential through active stock selection, risk management and diversification.

The Fund pursues its objective by investing, under normal market conditions, at least 80% of its net assets (including any borrowings for investment purposes) in Equity Instruments of Emerging Markets Issuers. Equity Instruments include common stock, preferred stock, warrants, exchange-traded funds that invest in equity securities, stock index futures, depositary receipts and other derivative instruments where the reference asset is an equity security. An issuer will be considered an Emerging Markets Issuer if it is organized, domiciled, or has a principal place of business in a country that is part of the *MSCI Emerging Markets Index*, or if an instrument provides exposure to the change in value of a company that meets that definition. However, the Fund may also invest in issuers organized, domiciled, or with a principal place of business in other countries if the *Adviser* considers it advisable to achieve the Fund’s investment

objective. The Fund can invest in companies of any size and may invest to a significant extent in small- and mid-cap companies from time to time in the discretion of the *Adviser*. Pending investment in Equity Instruments of Emerging Markets Issuers or for use as collateral to meet margin requirements, the Fund may invest in short-term instruments, including U.S. Government securities, bank certificates of deposit, money market instruments or funds, and such other liquid investments deemed appropriate by the *Adviser*. The Fund may invest in these securities without limit for temporary defensive purposes. There is no guarantee that the Fund's objective will be met.

The Fund also engages in currency transactions with counterparties primarily in order to hedge against a decline in the value of portfolio holdings denominated in particular currencies and to provide temporary exposure to a particular currency in lieu of leaving cash inflows uninvested. Currency transactions include forward currency contracts and exchange listed currency futures. A forward currency contract involves a privately negotiated obligation to purchase or sell (with delivery generally required) a specific currency at a future date, which may be any fixed number of days from the date of the contract agreed upon by the parties, at a price set at the time of the contract. The Fund seeks to diversify currency exposures and to avoid the risk of high exposures to any one currency, including U.S. dollars.

The Fund pursues a defensive investment style, meaning it seeks to participate in rising equity markets while mitigating downside risk in declining markets. In other words, the Fund expects to lag the performance of traditional emerging markets equity funds when these markets are rising, but to exceed the performance of traditional emerging markets equity funds during emerging equity market declines. To achieve this result, the Fund will be broadly diversified across companies, industries and countries and will invest in companies that the *Adviser* has identified to have low measures of risk and high quality (e.g., stable companies in good business health). The *Adviser* believes that the stocks of these types of companies tend to be lower “beta” stocks and that lower “beta” stocks generally are less volatile than higher “beta” stocks (that is, their value has a lower sensitivity to fluctuations in the securities markets). The *Adviser* expects low “beta” and high quality stocks to produce higher risk-adjusted returns over a full market cycle than high “beta” or poor quality stocks.

The Fund is actively managed and the *Adviser* will vary the Fund's exposures to issuers, industries, countries and currencies based on the *Adviser's* evaluation of investment opportunities within and across markets. In constructing the portfolio, the *Adviser* uses quantitative models, which combine active management to identify quality companies and statistical measures of risk to assure diversification by issuer, country, currency and industry, as well as additional criteria that form part of the *Adviser's* security selection process. The *Adviser* will use *volatility* and correlation forecasting and portfolio construction methodologies to manage the Fund. The *Adviser* utilizes quantitative risk models in furtherance of the Fund's investment objective, which seek to control portfolio level risk. Shifts in allocations among issuers, industries, countries or currencies will be determined using the quantitative models based on the *Adviser's* determinations of risk and quality, as well as other factors including, but not limited to, managing industry and sector exposures. The Fund bears the risk that the quantitative models used by the portfolio managers will not be successful in forecasting market returns or in determining the weighting of investment positions that will enable the Fund to achieve its investment objective. In managing the Fund's portfolio, the *Adviser* may from time to time utilize certain tax management techniques which consider the potential impact of federal income tax on shareholders' investment return.

The Fund makes use of derivative instruments, which may be used for hedging purposes and to enhance returns. The Fund may use derivatives as a substitute for investing in conventional securities and for investment purposes to increase its economic exposure to a particular security, currency or index in a cost effective manner. The Fund's use of derivatives such as futures contracts, forward contracts and certain other Equity Instruments (that are derivative instruments) will have the economic effect of financial leverage. Financial leverage magnifies exposure to the swings in prices of an asset underlying an Equity Instrument and results in increased *volatility*, which means the Fund will have the potential for greater gains, as well as the potential for greater losses, than if the Fund does not use Equity Instruments that have a leveraging effect. Leveraging tends to magnify, sometimes significantly, the effect of any increase or decrease in the Fund's exposure to an asset and may cause the Fund's NAV to be volatile. For example, if the *Adviser* seeks to gain enhanced exposure to a specific asset through an Equity Instrument providing leveraged exposure to the asset and that Equity Instrument increases in value, the gain to the Fund will be magnified; however, if that investment decreases in value, the loss to the Fund will be magnified. A decline in the Fund's assets due to losses magnified by the Equity Instruments providing leveraged exposure may require the Fund to liquidate portfolio positions to satisfy its obligations, to meet redemption requests or to meet asset segregation requirements when it may not be advantageous to do so. There is no assurance that the Fund's use of Equity Instruments providing enhanced exposure will enable the Fund to achieve its investment objective. In addition, to attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

The *Adviser* utilizes portfolio optimization techniques to determine trading activity, taking into account the transaction costs associated with trading each Equity Instrument. The Fund employs sophisticated proprietary trading techniques in an effort to mitigate trading costs and execution impact on the Fund.

Principal Risks of Investing in the Fund

Risk is inherent in all investing. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly from day to day and over time. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. ***The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.*** The following is a summary description of certain risks of investing in the Fund.

Common Stock Risk: The Fund may invest in, or have exposure to, common stocks. Common stocks are subject to greater fluctuations in market value than certain other asset classes as a result of such factors as a company's business performance, investor perceptions, stock market trends and general economic conditions.

Counterparty Risk: The Fund may enter into various types of derivative contracts. Many of these derivative contracts will be privately negotiated in the over-the-counter market. These contracts also involve exposure to credit risk, since contract performance depends in part on the financial condition of the counterparty. If a privately negotiated over-the-counter contract calls for payments by the Fund, the Fund must be prepared to make such payments when due. In addition, if a counterparty's creditworthiness declines, the Fund may not receive payments owed under the contract, or such payments may be delayed under such circumstances and the value of agreements with such counterparty can be expected to decline, potentially resulting in losses to the Fund.

Currency Risk: Currency risk is the risk that changes in currency exchange rates will negatively affect securities denominated in, and/or receiving revenues in, foreign currencies. The liquidity and trading value of foreign currencies could be affected by global economic factors, such as inflation, interest rate levels, and trade balances among countries, as well as the actions of sovereign governments and central banks. Adverse changes in currency exchange rates (relative to the U.S. dollar) may erode or reverse any potential gains from the Fund's investments in securities denominated in a foreign currency or may widen existing losses.

Derivatives Risk: In general, a derivative instrument typically involves leverage, *i.e.*, it provides exposure to potential gain or loss from a change in the level of the market price of the underlying security, currency or commodity (or a basket or index) in a notional amount that exceeds the amount of cash or assets required to establish or maintain the derivative instrument. Adverse changes in the value or level of the underlying asset or index, which the Fund may not directly own, can result in a loss to the Fund substantially greater than the amount invested in the derivative itself. The use of derivative instruments also exposes the Fund to additional risks and transaction costs. These instruments come in many varieties and have a wide range of potential risks and rewards, and may include, as further described in the section entitled "Principal Investment Strategies of the Fund," futures contracts, forward contracts and other derivative instruments where the reference asset is an equity security. A risk of the Fund's use of derivatives is that the fluctuations in their values may not correlate perfectly with the overall securities markets. Additionally, to the extent the Fund is required to segregate or "set aside" (often referred to as "asset segregation") liquid assets or otherwise cover open positions with respect to certain derivative instruments, the Fund may be required to sell portfolio instruments to meet these asset segregation requirements. There is a possibility that segregation involving a large percentage of the Fund's assets could impede portfolio management or the Fund's ability to meet redemption requests or other current obligations.

Emerging Market Risk: The Fund intends to have exposure to emerging markets. Emerging markets are riskier than more developed markets because they tend to develop unevenly and may never fully develop. Investments in emerging markets may be considered speculative. Emerging markets are more likely to experience hyperinflation and currency devaluations, which adversely affect returns to U.S. investors. In addition, many emerging securities markets have far lower trading volumes and less liquidity than developed markets.

Foreign Investments Risk: Foreign investments often involve special risks not present in U.S. investments that can increase the chances that the Fund will lose money. These risks include:

- The Fund generally holds its foreign instruments and cash in foreign banks and securities depositories, which may be recently organized or new to the foreign custody business and may be subject to only limited or no regulatory oversight.
- Changes in foreign currency exchange rates can affect the value of the Fund's portfolio.
- The economies of certain foreign markets may not compare favorably with the economy of the United States with respect to such issues as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- The governments of certain countries may prohibit or impose substantial restrictions on foreign investments in their capital markets or in certain industries.

- Many foreign governments do not supervise and regulate stock exchanges, brokers and the sale of securities to the same extent as does the United States and may not have laws to protect investors that are comparable to U.S. securities laws.
- Settlement and clearance procedures in certain foreign markets may result in delays in payment for or delivery of securities not typically associated with settlement and clearance of U.S. investments.

Forward and Futures Contract Risk: The successful use of forward and futures contracts draws upon the *Adviser's* skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of forward and futures contracts, which may adversely affect the Fund's NAV and *total return*, are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the *Adviser's* inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

Hedging Transactions Risk: The *Adviser* from time to time employs various hedging techniques. The success of the Fund's hedging strategy will be subject to the *Adviser's* ability to correctly assess the degree of correlation between the performance of the instruments used in the hedging strategy and the performance of the investments in the portfolio being hedged. Since the characteristics of many securities change as markets change or time passes, the success of the Fund's hedging strategy will also be subject to the *Adviser's* ability to continually recalculate, readjust, and execute hedges in an efficient and timely manner. For a variety of reasons, the *Adviser* may not seek to establish a perfect correlation between such hedging instruments and the portfolio holdings being hedged. Such imperfect correlation may prevent the Fund from achieving the intended hedge or expose the Fund to risk of loss. In addition, it is not possible to hedge fully or perfectly against any risk, and hedging entails its own costs (such as trading commissions and fees).

High Portfolio Turnover Risk: The investment techniques and strategies utilized by the Fund, including investments made on a shorter-term basis or in derivative instruments or instruments with a maturity of one year or less at the time of acquisition, may result in frequent portfolio trading and high portfolio turnover. High portfolio turnover rates will cause the Fund to incur higher levels of brokerage fees and commissions, which may reduce performance, and may cause higher levels of current tax liability to shareholders in the Fund.

Investment in Other Investment Companies Risk: As with other investments, investments in other investment companies, including exchange-traded funds ("ETFs"), are subject to market and manager risk. In addition, if the Fund acquires shares of investment companies, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies. The Fund may invest in money market *mutual funds*. An investment in a money market *mutual fund* is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Although money market *mutual funds* that invest in U.S. government securities seek to preserve the value of the Fund's investment at \$1.00 per share, it is possible to lose money by investing in a stable NAV money market *mutual fund*. Moreover, recent SEC rule amendments require prime money market *mutual funds* to use floating NAVs that do not preserve the value of the Fund's investment at \$1.00 per share. These rule amendments may impact the Fund's use of prime money market *mutual funds* for capital preservation purposes.

Leverage Risk: As part of the Fund's principal investment strategy, the Fund will make investments in futures contracts, forward contracts and other derivative instruments. These derivative instruments provide the economic effect of financial leverage by creating additional investment exposure to the underlying instrument, as well as the potential for greater loss. **If the Fund uses leverage through purchasing derivative instruments, the Fund has the risk of losses that exceed the net assets of the Fund.** The net asset value of the Fund while employing leverage will be more volatile and sensitive to market movements.

Manager Risk: If the *Adviser* makes poor investment decisions, it will negatively affect the Fund's investment performance.

Market Risk: Market risk is the risk that the markets on which the Fund's investments trade will increase or decrease in value. Prices may fluctuate widely over short or extended periods in response to company, market or economic news. Markets also tend to move in cycles, with periods of rising and falling prices. If there is a general decline in the securities and other markets, your investment in the Fund may lose value, regardless of the individual results of the securities and other instruments in which the Fund invests.

Mid-Cap Securities Risk: The Fund may invest in, or have exposure to, the securities of mid-cap companies. The prices of securities of mid-cap companies generally are more volatile than those of large capitalization companies and are more likely to be adversely affected than large-cap companies by changes in earnings results and investor expectations or poor economic or market conditions, including those experienced during a recession.

Model and Data Risk: Given the complexity of the investments and strategies of the Fund, the *Adviser* relies heavily on quantitative models and information and data supplied by third parties (“Models and Data”). Models and Data are used to construct sets of transactions and investments, to provide risk management insights, and to assist in hedging the Fund’s investments.

When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon expose the Fund to potential risks. Similarly, any hedging based on faulty Models and Data may prove to be unsuccessful. Some of the models used by the *Adviser* for the Fund are predictive in nature. The use of predictive models has inherent risks. Because predictive models are usually constructed based on historical data supplied by third parties, the success of relying on such models may depend heavily on the accuracy and reliability of the supplied historical data. The Fund bears the risk that the quantitative models used by the *Adviser* will not be successful in selecting companies for investment or in determining the weighting of investment positions that will enable the Fund to achieve its investment objective.

All models rely on correct market data inputs. If incorrect market data is entered into even a well-founded model, the resulting information will be incorrect. However, even if market data is input correctly, “model prices” will often differ substantially from market prices, especially for instruments with complex characteristics, such as derivative instruments.

Securities Lending Risk: The Fund’s risk in lending portfolio securities, as with other extensions of credit, consists of the possibility of loss to the Fund due to (i) the inability of the borrower to return the securities, (ii) a delay in receiving additional collateral to adequately cover any fluctuations in the value of securities on loan, (iii) a delay in recovery of the securities, or (iv) the loss of rights in the collateral should the borrower fail financially. In addition, the Fund is responsible for any loss that might result from its investment of the borrower’s collateral.

Small-Cap Securities Risk: Investments in or exposure to the securities of companies with smaller market capitalizations involve higher risks in some respects than do investments in securities of larger companies. For example, prices of such securities are often more volatile than prices of large capitalization securities. In addition, due to thin trading in some such securities, an investment in these securities may be more illiquid (*i.e.*, harder to sell) than that of larger capitalization securities. Smaller capitalization companies also fail more often than larger companies and may have more limited management and financial resources than larger companies.

Volatility Risk: The Fund may have investments that appreciate or decrease significantly in value over short periods of time. This may cause the Fund’s net asset value per share to experience significant increases or declines in value over short periods of time, however, all investments long- or short-term are subject to risk of loss.

Performance Information

The performance information below shows summary performance information for the Fund in a bar chart and an average annual *total returns* table. The information shows you how the Fund’s performance has varied year by year and provides some indication of the risks of investing in the Fund.

The Fund’s past performance (before and after taxes), as provided by the bar chart and performance table that follows, is not an indication of future results. Updated information on the Fund’s performance, including its current NAV per share, can be obtained by visiting <https://funds.aqr.com>.

Class I Shares—Total Returns

The bar chart below provides an illustration of how the Fund’s performance has varied in each of the indicated calendar years.

Highest Quarterly Return

9.73% (1Q17)

Lowest Quarterly Return

-12.10% (3Q15)

Average Annual Total Returns as of December 31, 2017

The following table compares the Fund's average annual *total returns* for Class I Shares and Class N Shares as of December 31, 2017 to the *MSCI Emerging Markets Index*. You cannot invest directly in an index. The table includes all applicable fees and sales charges.

	One Year	Five Year	Since Inception (July 9, 2012)
AQR Emerging Defensive Style Fund—Class I			
Return Before Taxes	28.21%	0.07%	1.88%
Return After Taxes on Distributions	27.84%	-0.29%	1.52%
Return After Taxes on Distributions and Sale of Fund Shares	16.47%	0.08%	1.49%
AQR Emerging Defensive Style Fund—Class N			
Return Before Taxes	27.91%	-0.16%	1.66%
<i>MSCI Emerging Markets Index</i> (reflects no deductions for fees, expenses or taxes)	37.28%	4.35%	6.44%

After-tax returns are calculated using the historical highest individual marginal tax rates and do not reflect the impact of state and local taxes. In some cases, the return after taxes on distributions and sale of Fund shares may exceed the return before taxes and the return after taxes on distributions due to an assumed benefit from any losses on a sale of Fund shares at the end of the measurement period. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns are not relevant to investors who hold their Fund shares through tax-deferred arrangements such as 401(k) plans or individual retirement accounts. After-tax returns are for Class I Shares only. After-tax returns for other classes will vary.

AQR Global Equity Fund

Fund Summary – January 29, 2018

Investment Objective

The AQR Global Equity Fund (the “Fund”) seeks long-term capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

	Class I	Class N
Management Fee	0.60%	0.60%
Distribution (12b-1) Fee	None	0.25%
Other Expenses	0.29%	0.29%
Acquired Fund Fees and Expenses	0.01%	0.01%
Total Annual Fund Operating Expenses	0.90%	1.15%
Less: Fee Waivers and/or Expense Reimbursements ¹	0.09%	0.09%
Total Annual Fund Operating Expenses after Fee Waivers and/or Expense Reimbursements	0.81%	1.06%

¹ The *Adviser* has contractually agreed to waive its management fee and/or to reimburse expenses of the Fund to the extent necessary to maintain the total annual fund operating expenses (excluding interest, taxes, dividends on short sales, borrowing costs, acquired fund fees and expenses, interest expense relating to short sales, expenses related to class action claims and extraordinary expenses) at no more than 0.80% for Class I Shares and 1.05% for Class N Shares (the “Fee Waiver Agreement”). This arrangement will continue at least through January 28, 2019. The Fee Waiver Agreement may only be terminated with the consent of the *Board of Trustees*, including a majority of the Trustees of the *Trust* who are not “interested persons” of the *Trust* within the meaning of the *1940 Act*. The *Adviser* is entitled to recapture the fees waived and/or expenses reimbursed, only to the extent that such recapture can be made during the thirty-six months following the end of the month during which the *Adviser* waived fees or reimbursed expenses. In no case will the *Adviser* recapture any amount that would cause the aggregate operating expenses of the Fund attributable to a share class during a year in which a repayment is made to exceed the lesser of (i) the applicable limits in effect at the time of the waiver and/or reimbursement, or (ii) the applicable limits in effect at the time of recapture.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other *mutual funds*. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same and takes into account the effect of the Fee Waiver Agreement through January 28, 2019, as discussed in Footnote No. 1 to the Fee Table. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class I Shares	\$ 83	\$278	\$490	\$1,100
Class N Shares	\$108	\$356	\$624	\$1,390

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. During the fiscal year ended September 30, 2017, the Fund’s portfolio turnover rate was 88% of the average value of its portfolio.

Principal Investment Strategies of the Fund

The Fund seeks to outperform, after expenses, the *MSCI World Index* (the *Global Equity Benchmark*) while seeking to control its *tracking error* relative to this benchmark. The Fund will target an average forecasted *tracking error* of approximately 4.0% relative to the *Global Equity Benchmark* over a long-term business cycle, but actual *tracking error* will vary based on market conditions, sector positioning, securities selection and other factors. The *Global Equity Benchmark* is a free float-adjusted market capitalization index that is designed to measure the performance of equities in developed markets, including the United States and Canada.

Generally, the Fund will invest in instruments of companies located in a number of different countries throughout the world, one of which may be the United States. Under normal circumstances, the Fund will invest significantly (at least 40%) in companies (i) organized or located outside the U.S., (ii) whose primary trading market is located outside the U.S. or (iii) doing a substantial amount of business outside the U.S., which the Fund considers as a company that

derives at least 50% of its revenue from business outside the U.S. or has at least 50% of its assets outside the U.S. The Fund will allocate its assets among various regions and countries, including the United States (but in no less than three different countries outside of the U.S.).

The *Adviser* uses a set of value, *momentum* and other factors to generate an investment portfolio based on the *Adviser's* global asset allocation models and security selection procedures. The *Adviser* believes that a better risk-adjusted return may be achievable by applying both value and *momentum* strategies simultaneously.

- Value strategies favor securities that appear cheap based on fundamental measures, often as a result of lack of favor. Examples of value strategies include using price-to-earnings and price-to-book ratios for choosing individual equities and countries, and purchasing power parity for choosing currencies.
- *Momentum* strategies favor securities with strong recent performance. Examples of *momentum* strategies include simple price *momentum* for choosing individual equities and countries, and foreign exchange rate *momentum* for selecting currencies.
- In addition to these two main strategies, the *Adviser* may use a number of additional quantitative strategies based on the *Adviser's* proprietary research.

In seeking to achieve its investment objective, the Fund may enter into both “long” and “short” positions in equities and currencies using derivative instruments. The owner of a “long” position in a derivative instrument will benefit from an increase in the price of the underlying investment. The owner of a “short” position in a derivative instrument will benefit from a decrease in the price of the underlying investment.

Generally, the Fund will invest at least 80% of its net assets (including any borrowings for investment purposes) in equity and equity-related instruments (including, but not limited to, exchange-traded funds, equity index futures, equity index swaps, swaps on equity index futures and depositary receipts). The Fund will invest in companies with a broad range of market capitalizations. The Fund has no market capitalization constraints. The Fund invests primarily in securities comprising the *Global Equity Benchmark* and also invests to some extent in securities outside the *Global Equity Benchmark* which the *Adviser* deems to have similar investment characteristics to the securities comprising the *Global Equity Benchmark*. The Fund may invest in or use rights, warrants, equity swaps, financial futures contracts, swaps on futures contracts, forward foreign currency contracts and other types of derivative instruments in seeking to achieve its investment objective. A portion of the Fund's assets may be held in cash or cash equivalents including, but not limited to, money market instruments, interests in short-term investment funds or shares of money market or short-term bond funds. However, under normal market conditions net economic exposure to the equity markets (i.e. the total value of equity positions plus the net notional value of equity derivatives) will generally equal at least 95% of the Fund's net assets.

To attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

The *Adviser* believes that the management of transaction costs should be considered when determining whether an investment is attractive. Transaction costs include commissions, bid-ask spreads, market impact and time delays (time between decision and implementation when a market may move in favor of or against the Fund). The *Adviser* considers transaction costs both in its forecasting model and optimization process to seek to ensure that trades for the Fund will remain attractive after transaction costs are reflected.

Principal Risks of Investing in the Fund

Risk is inherent in all investing. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly from day to day and over time. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. ***The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.*** The following is a summary description of certain risks of investing in the Fund.

Common Stock Risk: The Fund may invest in, or have exposure to, common stocks. Common stocks are subject to greater fluctuations in market value than certain other asset classes as a result of such factors as a company's business performance, investor perceptions, stock market trends and general economic conditions.

Counterparty Risk: The Fund may enter into various types of derivative contracts. Many of these derivative contracts will be privately negotiated in the over-the-counter market. These contracts also involve exposure to credit risk, since contract performance depends in part on the financial condition of the counterparty. If a privately negotiated over-the-counter contract calls for payments by the Fund, the Fund must be prepared to make such payments when due. In

addition, if a counterparty's creditworthiness declines, the Fund may not receive payments owed under the contract, or such payments may be delayed under such circumstances and the value of agreements with such counterparty can be expected to decline, potentially resulting in losses to the Fund.

Currency Risk: Currency risk is the risk that changes in currency exchange rates will negatively affect securities denominated in, and/or receiving revenues in, foreign currencies. The liquidity and trading value of foreign currencies could be affected by global economic factors, such as inflation, interest rate levels, and trade balances among countries, as well as the actions of sovereign governments and central banks. Adverse changes in currency exchange rates (relative to the U.S. dollar) may erode or reverse any potential gains from the Fund's investments in securities denominated in a foreign currency or may widen existing losses.

Derivatives Risk: In general, a derivative contract typically involves leverage, *i.e.*, it provides exposure to potential gain or loss from a change in the level of the market price of the underlying security, currency or commodity (or a basket or index) in a notional amount that exceeds the amount of cash or assets required to establish or maintain the derivative contract. Adverse changes in the value or level of the underlying asset or index, which the Fund may not directly own, can result in a loss to the Fund substantially greater than the amount invested in the derivative itself. The use of derivative instruments also exposes the Fund to additional risks and transaction costs. These instruments come in many varieties and have a wide range of potential risks and rewards, and may include, as further described in the section entitled "Principal Investment Strategies of the Fund," futures contracts, swaps and forward foreign currency contracts. A risk of the Fund's use of derivatives is that the fluctuations in their values may not correlate perfectly with the overall securities markets. Additionally, to the extent the Fund is required to segregate or "set aside" (often referred to as "asset segregation") liquid assets or otherwise cover open positions with respect to certain derivative instruments, the Fund may be required to sell portfolio instruments to meet these asset segregation requirements. There is a possibility that segregation involving a large percentage of the Fund's assets could impede portfolio management or the Fund's ability to meet redemption requests or other current obligations.

Foreign Investments Risk: Foreign investments often involve special risks not present in U.S. investments that can increase the chances that the Fund will lose money. These risks include:

- The Fund generally holds its foreign instruments and cash in foreign banks and securities depositories, which may be recently organized or new to the foreign custody business and may be subject to only limited or no regulatory oversight.
- Changes in foreign currency exchange rates can affect the value of the Fund's portfolio.
- The economies of certain foreign markets may not compare favorably with the economy of the United States with respect to such issues as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- The governments of certain countries may prohibit or impose substantial restrictions on foreign investments in their capital markets or in certain industries.
- Many foreign governments do not supervise and regulate stock exchanges, brokers and the sale of securities to the same extent as does the United States and may not have laws to protect investors that are comparable to U.S. securities laws.
- Settlement and clearance procedures in certain foreign markets may result in delays in payment for or delivery of securities not typically associated with settlement and clearance of U.S. investments.

Forward and Futures Contract Risk: The successful use of forward and futures contracts draws upon the *Adviser's* skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of forward and futures contracts, which may adversely affect the Fund's *NAV* and *total return*, are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the *Adviser's* inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

Hedging Transactions Risk: The *Adviser* from time to time employs various hedging techniques. The success of the Fund's hedging strategy will be subject to the *Adviser's* ability to correctly assess the degree of correlation between the performance of the instruments used in the hedging strategy and the performance of the investments in the portfolio being hedged. Since the characteristics of many securities change as markets change or time passes, the success of the Fund's hedging strategy will also be subject to the *Adviser's* ability to continually recalculate, readjust, and execute hedges in an efficient and timely manner. For a variety of reasons, the *Adviser* may not seek to establish a perfect

correlation between such hedging instruments and the portfolio holdings being hedged. Such imperfect correlation may prevent the Fund from achieving the intended hedge or expose the Fund to risk of loss. In addition, it is not possible to hedge fully or perfectly against any risk, and hedging entails its own costs (such as trading commissions and fees).

Investment in Other Investment Companies Risk: As with other investments, investments in other investment companies, including exchange-traded funds (“ETFs”), are subject to market and manager risk. In addition, if the Fund acquires shares of investment companies, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies. The Fund may invest in money market *mutual funds*. An investment in a money market *mutual fund* is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Although money market *mutual funds* that invest in U.S. government securities seek to preserve the value of the Fund’s investment at \$1.00 per share, it is possible to lose money by investing in a stable NAV money market *mutual fund*. Moreover, recent SEC rule amendments require prime money market *mutual funds* to use floating NAVs that do not preserve the value of the Fund’s investment at \$1.00 per share. These rule amendments may impact the Fund’s use of prime money market *mutual funds* for capital preservation purposes.

Leverage Risk: As part of the Fund’s principal investment strategy, the Fund will make investments in futures contracts, forward contracts, swaps and other derivative instruments. These derivative instruments provide the economic effect of financial leverage by creating additional investment exposure to the underlying instrument, as well as the potential for greater loss. **If the Fund uses leverage through purchasing derivative instruments, the Fund has the risk of losses that exceed the net assets of the Fund.** The net asset value of the Fund while employing leverage will be more volatile and sensitive to market movements.

Manager Risk: If the *Adviser* makes poor investment decisions, it will negatively affect the Fund’s investment performance.

Market Risk: Market risk is the risk that the markets on which the Fund’s investments trade will increase or decrease in value. Prices may fluctuate widely over short or extended periods in response to company, market or economic news. Markets also tend to move in cycles, with periods of rising and falling prices. If there is a general decline in the securities and other markets, your investment in the Fund may lose value, regardless of the individual results of the securities and other instruments in which the Fund invests.

Mid-Cap Securities Risk: The Fund may invest in, or have exposure to, the securities of mid-cap companies. The prices of securities of mid-cap companies generally are more volatile than those of large capitalization companies and are more likely to be adversely affected than large-cap companies by changes in earnings results and investor expectations or poor economic or market conditions, including those experienced during a recession.

Model and Data Risk: Given the complexity of the investments and strategies of the Fund, the *Adviser* relies heavily on quantitative models and information and data supplied by third parties (“Models and Data”). Models and Data are used to construct sets of transactions and investments, to provide risk management insights, and to assist in hedging the Fund’s investments.

When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon expose the Fund to potential risks. Similarly, any hedging based on faulty Models and Data may prove to be unsuccessful. Some of the models used by the *Adviser* for the Fund are predictive in nature. The use of predictive models has inherent risks. Because predictive models are usually constructed based on historical data supplied by third parties, the success of relying on such models may depend heavily on the accuracy and reliability of the supplied historical data. The Fund bears the risk that the quantitative models used by the *Adviser* will not be successful in selecting companies for investment or in determining the weighting of investment positions that will enable the Fund to achieve its investment objective.

All models rely on correct market data inputs. If incorrect market data is entered into even a well-founded model, the resulting information will be incorrect. However, even if market data is input correctly, “model prices” will often differ substantially from market prices, especially for instruments with complex characteristics, such as derivative instruments.

Momentum Style Risk: Investing in or having exposure to securities with positive *momentum* entails investing in securities that have had above-average recent returns. These securities may be more volatile than a broad cross-section of securities. In addition, there may be periods during which the investment performance of the Fund while using a *momentum* strategy may suffer.

Securities Lending Risk: The Fund’s risk in lending portfolio securities, as with other extensions of credit, consists of the possibility of loss to the Fund due to (i) the inability of the borrower to return the securities, (ii) a delay in receiving additional collateral to adequately cover any fluctuations in the value of securities on loan, (iii) a delay in recovery of the securities, or (iv) the loss of rights in the collateral should the borrower fail financially. In addition, the Fund is responsible for any loss that might result from its investment of the borrower’s collateral.

Short Sale Risk: The Fund may take a short position in a derivative instrument, such as a future, forward or swap. A short position in a derivative instrument involves the risk of a theoretically unlimited increase in the value of the underlying instrument, which could cause the Fund to suffer a (potentially unlimited) loss. Short sales also involve transaction and financing costs that will reduce potential Fund gains and increase potential Fund losses.

Small-Cap Securities Risk: Investments in or exposure to the securities of companies with smaller market capitalizations involve higher risks in some respects than do investments in securities of larger companies. For example, prices of such securities are often more volatile than prices of large capitalization securities. In addition, due to thin trading in some such securities, an investment in these securities may be more illiquid (*i.e.*, harder to sell) than that of larger capitalization securities. Smaller capitalization companies also fail more often than larger companies and may have more limited management and financial resources than larger companies.

Swap Agreements Risk: Swap agreements involve the risk that the party with whom the Fund has entered into the swap will default on its obligation to pay the Fund. Additionally, certain unexpected market events or significant adverse market movements could result in the Fund not holding enough assets to be able to meet its obligations under the agreement. Such occurrences may negatively impact the Fund's ability to implement its principal investment strategies and could result in losses to the Fund.

Value Style Risk: Investing in or having exposure to "value" securities presents the risk that the securities may never reach what the *Adviser* believes are their full market values, either because the market fails to recognize what the *Adviser* considers to be the security's true value or because the *Adviser* misjudged that value. In addition, there may be periods during which the investment performance of the Fund while using a value strategy may suffer.

Volatility Risk: The Fund may have investments that appreciate or decrease significantly in value over short periods of time. This may cause the Fund's net asset value per share to experience significant increases or declines in value over short periods of time, however, all investments long- or short-term are subject to risk of loss.

Performance Information

The performance information below shows summary performance information for the Fund in a bar chart and an average annual *total returns* table. The information shows you how the Fund's performance has varied year by year and provides some indication of the risks of investing in the Fund.

A privately offered fund managed by the *Adviser* was reorganized into the Class Y Shares of the Fund on December 31, 2009, the date the Fund commenced operations. This privately offered fund was organized in March 2006 and commenced operations in June 2006 and had an investment objective, investment policies and restrictions that were, in all material respects, the same as those of the Fund. However, the privately offered fund was not registered as an investment company under the *1940 Act*. In addition, this privately offered fund was not subject to certain investment limitations, diversification requirements, liquidity requirements, and other restrictions imposed by the *1940 Act* and the *Code* which, if applicable, might have adversely affected its performance.

The Class I Shares and Class N Shares of the Fund commenced operations on December 31, 2009. The performance for periods prior to December 31, 2009 is that of the privately offered fund. The privately offered fund's expense ratio during the periods presented was lower than the Fund's estimated expense ratio for Class I Shares and Class N Shares. The Fund has restated the privately offered fund's performance to reflect the Fund's fees, estimated expenses and fee waivers/expense limitations of Class I Shares and Class N Shares upon their initial offering.

The Fund's past performance (before and after taxes), as provided by the bar chart and performance table that follows, is not an indication of future results. Updated information on the Fund's performance, including its current NAV per share, can be obtained by visiting <https://funds.aqr.com>.

Class I Shares—Total Returns

The bar chart below provides an illustration of how the Fund's performance has varied in each of the indicated calendar years.

Highest Quarterly Return

22.02% (2Q09)

Lowest Quarterly Return

-20.97% (4Q08)

Average Annual Total Returns as of December 31, 2017

The following table compares the Fund's average annual *total returns* for Class I Shares and Class N Shares as of December 31, 2017 to the *MSCI World Index*. You cannot invest directly in an index. The table includes all applicable fees and sales charges.

	One Year	Five Year	Ten Year
AQR Global Equity Fund—Class I			
Return Before Taxes	25.44%	12.79%	5.83%
Return After Taxes on Distributions	23.53%	8.09%	3.38%
Return After Taxes on Distributions and Sale of Fund Shares	15.11%	8.66%	3.87%
AQR Global Equity Fund—Class N			
Return Before Taxes	25.02%	12.47%	5.51%
<i>MSCI World Index</i> (reflects no deductions for fees, expenses or taxes)	22.40%	11.64%	5.03%

After-tax returns are calculated using the historical highest individual marginal tax rates and do not reflect the impact of state and local taxes. In some cases, the return after taxes on distributions and sale of Fund shares may exceed the return after taxes on distributions due to an assumed benefit from any losses on a sale of Fund shares at the end of the measurement period. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns are not relevant to investors who hold their Fund shares through tax-deferred arrangements such as 401(k) plans or individual retirement accounts. After-tax returns are for Class I Shares only. After-tax returns for other classes will vary.

Investment Manager

The Fund's investment manager is AQR Capital Management, LLC.

Portfolio Managers

Name	Portfolio Manager of the Fund Since	Title

AQR International Equity Fund

Fund Summary – January 29, 2018

Investment Objective

The AQR International Equity Fund (the “Fund”) seeks long-term capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

	Class I	Class N
Management Fee ^{1,2}	0.65%	0.65%
Distribution (12b-1) Fee	None	0.25%
Other Expenses	0.28%	0.29%
Acquired Fund Fees and Expenses	0.01%	0.01%
Total Annual Fund Operating Expenses ²	0.94%	1.20%
Less: Fee Waivers and/or Expense Reimbursements ³	0.08%	0.09%
Total Annual Fund Operating Expenses after Fee Waivers and/or Expense Reimbursements	0.86%	1.11%

¹ The Management Fee has been restated to reflect current fees. Effective January 29, 2018, the Fund's Management Fee was reduced by 0.05% to 0.65%.

² The Total Annual Fund Operating Expenses for Class I and Class N Shares do not correlate to the Class I and Class N Shares' ratio to average net assets of expenses, before reimbursements and/or waivers given in the Fund's most recent annual report which does not include the restatement of the Management Fee.

³ The *Adviser* has contractually agreed to waive its management fee and/or to reimburse expenses of the Fund to the extent necessary to maintain the total annual fund operating expenses (excluding interest, taxes, dividends on short sales, borrowing costs, acquired fund fees and expenses, interest expense relating to short sales, expenses related to class action claims and extraordinary expenses) at no more than 0.85% for Class I Shares and 1.10% for Class N Shares (the “Fee Waiver Agreement”). This arrangement will continue at least through January 28, 2019. The Fee Waiver Agreement may only be terminated with the consent of the *Board of Trustees*, including a majority of the Trustees of the *Trust* who are not “interested persons” of the *Trust* within the meaning of the *1940 Act*. The *Adviser* is entitled to recapture the fees waived and/or expenses reimbursed, only to the extent that such recapture can be made during the thirty-six months following the end of the month during which the *Adviser* waived fees or reimbursed expenses. In no case will the *Adviser* recapture any amount that would cause the aggregate operating expenses of the Fund attributable to a share class during a year in which a repayment is made to exceed the lesser of (i) the applicable limits in effect at the time of the waiver and/or reimbursement, or (ii) the applicable limits in effect at the time of recapture.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other *mutual funds*. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same and takes into account the effect of the Fee Waiver Agreement through January 28, 2019, as discussed in Footnote No. 3 to the Fee Table. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class I Shares	\$ 88	\$292	\$512	\$1,147
Class N Shares	\$113	\$372	\$651	\$1,447

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund's performance. During the fiscal year ended September 30, 2017, the Fund's portfolio turnover rate was 83% of the average value of its portfolio.

Principal Investment Strategies of the Fund

The Fund seeks to outperform, after expenses, the *MSCI EAFE Index* (the *International Equity Benchmark*) while seeking to control its *tracking error* relative to this benchmark. The Fund will target a forecasted *tracking error* generally in the range of 3-7% relative to the *International Equity Benchmark* over a long-term business cycle, but actual *tracking error* will vary based on market conditions, sector positioning, securities selection and other factors. The *International Equity Benchmark* is a free float-adjusted market capitalization index that is designed to measure the performance of equities in developed markets, excluding the United States and Canada.

The *Adviser* uses a set of value, *momentum* and other factors to generate an investment portfolio based on the *Adviser's* global asset allocation models and security selection procedures. The *Adviser* believes that a better risk-adjusted return may be achievable by applying both value and *momentum* strategies simultaneously:

- Value strategies favor securities that appear cheap based on fundamental measures, often as a result of lack of favor. Examples of value strategies include using price-to-earnings and price-to-book ratios for choosing individual equities and countries, and purchasing power parity for choosing currencies.
- *Momentum* strategies favor securities with strong recent performance. Examples of *momentum* strategies include simple price *momentum* for choosing individual equities and countries, and foreign exchange rate *momentum* for selecting currencies.
- In addition to these two main strategies, the *Adviser* may use a number of additional quantitative strategies based on the *Adviser's* proprietary research.

Generally, the Fund will invest at least 80% of its net assets (including any borrowings for investment purposes) in equity and equity-related instruments (including, but not limited to, exchange-traded funds, equity index futures, equity index swaps, swaps on equity index futures and depository receipts). The Fund will invest in companies with a broad range of market capitalizations, including smaller capitalization companies. The Fund invests primarily in securities comprising the *International Equity Benchmark* and also invests to some extent in securities outside the *International Equity Benchmark* which the *Adviser* deems to have similar investment characteristics to the securities comprising the *International Equity Benchmark*. The Fund may invest in or use rights, warrants, equity swaps, financial futures contracts, swaps on futures contracts, forward foreign currency contracts and other types of derivative instruments in seeking to achieve its investment objective. A portion of the Fund's assets will be held in cash or cash equivalents including, but not limited to, money market instruments, interests in short-term investment funds or shares of money market or short-term bond funds.

The Fund may invest to a lesser extent in securities of issuers in countries and currencies not included in the *International Equity Benchmark*. However, the *Adviser* does not currently expect such securities to be a significant component of the Fund's investment portfolio.

To attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

The *Adviser* believes that the management of transaction costs should be considered when determining whether an investment is attractive. Transaction costs include commissions, bid-ask spreads, market impact and time delays (time between decision and implementation when a market may move in favor of or against the Fund). The *Adviser* considers transaction costs both in its forecasting model and optimization process to seek to ensure that trades for the Fund will remain attractive after transaction costs are reflected.

Principal Risks of Investing in the Fund

Risk is inherent in all investing. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly from day to day and over time. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. ***The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.*** The following is a summary description of certain risks of investing in the Fund.

Common Stock Risk: The Fund may invest in, or have exposure to, common stocks. Common stocks are subject to greater fluctuations in market value than certain other asset classes as a result of such factors as a company's business performance, investor perceptions, stock market trends and general economic conditions.

Counterparty Risk: The Fund may enter into various types of derivative contracts. Many of these derivative contracts will be privately negotiated in the over-the-counter market. These contracts also involve exposure to credit risk, since contract performance depends in part on the financial condition of the counterparty. If a privately negotiated over-the-counter contract calls for payments by the Fund, the Fund must be prepared to make such payments when due. In addition, if a counterparty's creditworthiness declines, the Fund may not receive payments owed under the contract, or such payments may be delayed under such circumstances and the value of agreements with such counterparty can be expected to decline, potentially resulting in losses to the Fund.

Currency Risk: Currency risk is the risk that changes in currency exchange rates will negatively affect securities denominated in, and/or receiving revenues in, foreign currencies. The liquidity and trading value of foreign currencies could be affected by global economic factors, such as inflation, interest rate levels, and trade balances among countries,

as well as the actions of sovereign governments and central banks. Adverse changes in currency exchange rates (relative to the U.S. dollar) may erode or reverse any potential gains from the Fund's investments in securities denominated in a foreign currency or may widen existing losses.

Derivatives Risk: In general, a derivative contract typically involves leverage, *i.e.*, it provides exposure to potential gain or loss from a change in the level of the market price of the underlying security, currency or commodity (or a basket or index) in a notional amount that exceeds the amount of cash or assets required to establish or maintain the derivative contract. Adverse changes in the value or level of the underlying asset or index, which the Fund may not directly own, can result in a loss to the Fund substantially greater than the amount invested in the derivative itself. The use of derivative instruments also exposes the Fund to additional risks and transaction costs. These instruments come in many varieties and have a wide range of potential risks and rewards, and may include, as further described in the section entitled "Principal Investment Strategies of the Fund," futures contracts, swaps and forward foreign currency contracts. A risk of the Fund's use of derivatives is that the fluctuations in their values may not correlate perfectly with the overall securities markets. Additionally, to the extent the Fund is required to segregate or "set aside" (often referred to as "asset segregation") liquid assets or otherwise cover positions with respect to certain derivative instruments, the Fund may be required to sell portfolio instruments to meet these asset segregation requirements. There is a possibility that segregation involving a large percentage of the Fund's assets could impede portfolio management or the Fund's ability to meet redemption requests or other current obligations.

Foreign Investments Risk: Foreign investments often involve special risks not present in U.S. investments that can increase the chances that the Fund will lose money. These risks include:

- The Fund generally holds its foreign instruments and cash in foreign banks and securities depositories, which may be recently organized or new to the foreign custody business and may be subject to only limited or no regulatory oversight.
- Changes in foreign currency exchange rates can affect the value of the Fund's portfolio.
- The economies of certain foreign markets may not compare favorably with the economy of the United States with respect to such issues as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- The governments of certain countries may prohibit or impose substantial restrictions on foreign investments in their capital markets or in certain industries.
- Many foreign governments do not supervise and regulate stock exchanges, brokers and the sale of securities to the same extent as does the United States and may not have laws to protect investors that are comparable to U.S. securities laws.
- Settlement and clearance procedures in certain foreign markets may result in delays in payment for or delivery of securities not typically associated with settlement and clearance of U.S. investments.

Forward and Futures Contract Risk: The successful use of forward and futures contracts draws upon the *Adviser's* skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of forward and futures contracts, which may adversely affect the Fund's *NAV* and *total return*, are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the *Adviser's* inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

Hedging Transactions Risk: The *Adviser* from time to time employs various hedging techniques. The success of the Fund's hedging strategy will be subject to the *Adviser's* ability to correctly assess the degree of correlation between the performance of the instruments used in the hedging strategy and the performance of the investments in the portfolio being hedged. Since the characteristics of many securities change as markets change or time passes, the success of the Fund's hedging strategy will also be subject to the *Adviser's* ability to continually recalculate, readjust, and execute hedges in an efficient and timely manner. For a variety of reasons, the *Adviser* may not seek to establish a perfect correlation between such hedging instruments and the portfolio holdings being hedged. Such imperfect correlation may prevent the Fund from achieving the intended hedge or expose the Fund to risk of loss. In addition, it is not possible to hedge fully or perfectly against any risk, and hedging entails its own costs (such as trading commissions and fees).

Investment in Other Investment Companies Risk: As with other investments, investments in other investment companies, including exchange-traded funds ("ETFs"), are subject to market and manager risk. In addition, if the Fund acquires shares of investment companies, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies. The Fund may

invest in money market *mutual funds*. An investment in a money market *mutual fund* is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Although money market *mutual funds* that invest in U.S. government securities seek to preserve the value of the Fund's investment at \$1.00 per share, it is possible to lose money by investing in a stable NAV money market *mutual fund*. Moreover, recent SEC rule amendments require prime money market *mutual funds* to use floating NAVs that do not preserve the value of the Fund's investment at \$1.00 per share. These rule amendments may impact the Fund's use of prime money market *mutual funds* for capital preservation purposes.

Leverage Risk: As part of the Fund's principal investment strategy, the Fund will make investments in futures contracts, forward contracts, swaps and other derivative instruments. These derivative instruments provide the economic effect of financial leverage by creating additional investment exposure to the underlying instrument, as well as the potential for greater loss. **If the Fund uses leverage through purchasing derivative instruments, the Fund has the risk of losses that exceed the net assets of the Fund.** The net asset value of the Fund while employing leverage will be more volatile and sensitive to market movements.

Manager Risk: If the *Adviser* makes poor investment decisions, it will negatively affect the Fund's investment performance.

Market Risk: Market risk is the risk that the markets on which the Fund's investments trade will increase or decrease in value. Prices may fluctuate widely over short or extended periods in response to company, market or economic news. Markets also tend to move in cycles, with periods of rising and falling prices. If there is a general decline in the securities and other markets, your investment in the Fund may lose value, regardless of the individual results of the securities and other instruments in which the Fund invests.

Mid-Cap Securities Risk: The Fund may invest in, or have exposure to, the securities of mid-cap companies. The prices of securities of mid-cap companies generally are more volatile than those of large capitalization companies and are more likely to be adversely affected than large-cap companies by changes in earnings results and investor expectations or poor economic or market conditions, including those experienced during a recession.

Model and Data Risk: Given the complexity of the investments and strategies of the Fund, the *Adviser* relies heavily on quantitative models and information and data supplied by third parties ("Models and Data"). Models and Data are used to construct sets of transactions and investments, to provide risk management insights, and to assist in hedging the Fund's investments.

When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon expose the Fund to potential risks. Similarly, any hedging based on faulty Models and Data may prove to be unsuccessful. Some of the models used by the *Adviser* for the Fund are predictive in nature. The use of predictive models has inherent risks. Because predictive models are usually constructed based on historical data supplied by third parties, the success of relying on such models may depend heavily on the accuracy and reliability of the supplied historical data. The Fund bears the risk that the quantitative models used by the *Adviser* will not be successful in selecting companies for investment or in determining the weighting of investment positions that will enable the Fund to achieve its investment objective.

All models rely on correct market data inputs. If incorrect market data is entered into even a well-founded model, the resulting information will be incorrect. However, even if market data is input correctly, "model prices" will often differ substantially from market prices, especially for instruments with complex characteristics, such as derivative instruments.

Momentum Style Risk: Investing in or having exposure to securities with positive *momentum* entails investing in securities that have had above-average recent returns. These securities may be more volatile than a broad cross-section of securities. In addition, there may be periods during which the investment performance of the Fund while using a *momentum* strategy may suffer.

Securities Lending Risk: The Fund's risk in lending portfolio securities, as with other extensions of credit, consists of the possibility of loss to the Fund due to (i) the inability of the borrower to return the securities, (ii) a delay in receiving additional collateral to adequately cover any fluctuations in the value of securities on loan, (iii) a delay in recovery of the securities, or (iv) the loss of rights in the collateral should the borrower fail financially. In addition, the Fund is responsible for any loss that might result from its investment of the borrower's collateral.

Small-Cap Securities Risk: Investments in or exposure to the securities of companies with smaller market capitalizations involve higher risks in some respects than do investments in securities of larger companies. For example, prices of such securities are often more volatile than prices of large capitalization securities. In addition, due to thin trading in some such securities, an investment in these securities may be more illiquid (*i.e.*, harder to sell) than that of larger capitalization securities. Smaller capitalization companies also fail more often than larger companies and may have more limited management and financial resources than larger companies.

Swap Agreements Risk: Swap agreements involve the risk that the party with whom the Fund has entered into the swap will default on its obligation to pay the Fund. Additionally, certain unexpected market events or significant adverse market movements could result in the Fund not holding enough assets to be able to meet its obligations under the agreement. Such occurrences may negatively impact the Fund’s ability to implement its principal investment strategies and could result in losses to the Fund.

Value Style Risk: Investing in or having exposure to “value” securities presents the risk that the securities may never reach what the *Adviser* believes are their full market values, either because the market fails to recognize what the *Adviser* considers to be the security’s true value or because the *Adviser* misjudged that value. In addition, there may be periods during which the investment performance of the Fund while using a value strategy may suffer.

Volatility Risk: The Fund may have investments that appreciate or decrease significantly in value over short periods of time. This may cause the Fund’s net asset value per share to experience significant increases or declines in value over short periods of time, however, all investments long- or short-term are subject to risk of loss.

Performance Information

The performance information below shows summary performance information for the Fund in a bar chart and an average annual *total returns* table. The information shows you how the Fund’s performance has varied year by year and provides some indication of the risks of investing in the Fund.

A privately offered fund managed by the *Adviser* was reorganized into the Class Y Shares of the Fund on August 28, 2009, the date the Fund commenced operations. This privately offered fund was organized in June 2004 and commenced operations in July 2004 and had an investment objective, investment policies and restrictions that were, in all material respects, the same as those of the Fund. However, the privately offered fund was not registered as an investment company under the *1940 Act*. In addition, this privately offered fund was not subject to certain investment limitations, diversification requirements, liquidity requirements, and other restrictions imposed by the *1940 Act* and the *Code*, which, if applicable, might have adversely affected its performance.

The Class I Shares and Class N Shares of the Fund commenced operations on September 29, 2009. The performance for the period from August 28, 2009 (the date the Class Y Shares of the Fund commenced operations) to September 29, 2009 is based on the performance of the Class Y Shares of the Fund, and for periods prior to August 28, 2009 is that of the privately offered fund. The expense ratio of both the privately offered fund and of the Class Y Shares of the Fund was lower than the Fund’s estimated expense ratio for Class I Shares and Class N Shares during the periods presented. The Fund has restated the privately offered fund’s and the Class Y Shares’ performance to reflect the Fund’s fees, estimated expenses and fee waivers/expense limitations of Class I Shares and Class N Shares upon their initial offering.

The Fund’s past performance (before and after taxes), as provided by the bar chart and performance table that follows, is not an indication of future results. Updated information on the Fund’s performance, including its current NAV per share, can be obtained by visiting <https://funds.aqr.com>.

Class I Shares—Total Returns

The bar chart below provides an illustration of how the Fund’s performance has varied in each of the indicated calendar years.

Highest Quarterly Return

26.20% (2Q09)

Lowest Quarterly Return

-25.10% (3Q08)

Average Annual Total Returns as of December 31, 2017

The following table compares the Fund's average annual *total returns* for Class I Shares and Class N Shares as of December 31, 2017 to the *MSCI EAFE Index*. You cannot invest directly in an index. The table includes all applicable fees and sales charges.

	One Year	Five Year	Ten Year
AQR International Equity Fund—Class I			
Return Before Taxes	25.71%	8.66%	2.67%
Return After Taxes on Distributions	22.21%	6.75%	1.41%
Return After Taxes on Distributions and Sale of Fund Shares	15.89%	6.43%	1.77%
AQR International Equity Fund—Class N			
Return Before Taxes	25.36%	8.33%	2.36%
<i>MSCI EAFE Index</i> (reflects no deductions for fees, expenses or taxes)	25.03%	7.90%	1.94%

After-tax returns are calculated using the historical highest individual marginal tax rates and do not reflect the impact of state and local taxes. In some cases, the return after taxes on distributions and sale of Fund shares may exceed the return after taxes on distributions due to an assumed benefit from any losses on a sale of Fund shares at the end of the measurement period. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns are not relevant to investors who hold their Fund shares through tax-deferred arrangements such as 401(k) plans or individual retirement accounts. After-tax returns are for Class I Shares only. After-tax returns for other classes will vary.

Investment Manager

The Fund's investment manager is AQR Capital Management, LLC.

Portfolio Managers

Name	Portfolio Manager of the Fund Since	Title

AQR Large Cap Relaxed Constraint Equity Fund

Fund Summary – January 29, 2018

Investment Objective

The AQR Large Cap Relaxed Constraint Equity Fund (the “Fund”) seeks long-term capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

	Class I	Class N
Management Fee	0.60%	0.60%
Distribution (12b-1) Fee	None	0.25%
Other Expenses		
Dividends on short sales	0.62%	0.62%
All other expenses	1.47%	2.75%
Total Other Expenses	2.09%	3.37%
Acquired Fund Fees and Expenses	0.01%	0.01%
Total Annual Fund Operating Expenses	2.70%	4.23%
Less: Fee Waivers and/or Expense Reimbursements ¹	1.27%	2.55%
Total Annual Fund Operating Expenses after Fee Waivers and/or Expense Reimbursements	1.43%	1.68%

¹ The *Adviser* has contractually agreed to waive its management fee and/or to reimburse expenses of the Fund to the extent necessary to maintain the total annual fund operating expenses (excluding interest, taxes, dividends on short sales, borrowing costs, acquired fund fees and expenses, interest expense relating to short sales, expenses related to class action claims and extraordinary expenses) at no more than 0.80% for Class I Shares and 1.05% for Class N Shares (the “Fee Waiver Agreement”). This arrangement will continue at least through January 28, 2019. The Fee Waiver Agreement may only be terminated with the consent of the *Board of Trustees*, including a majority of the Trustees of the *Trust* who are not “interested persons” of the *Trust* within the meaning of the 1940 Act. The *Adviser* is entitled to recapture the fees waived and/or expenses reimbursed, only to the extent that the recapture can be made during the thirty-six months following the end of the month during which the *Adviser* waived fees or reimbursed expenses. In no case will the *Adviser* recapture any amount that would cause the aggregate operating expenses of the Fund attributable to a share class during a year in which a repayment is made to exceed the lesser of (i) the applicable limits in effect at the time of the waiver and/or reimbursement, or (ii) the applicable limits in effect at the time of recapture.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other *mutual funds*. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same and takes into account the effect of the Fee Waiver Agreement through January 28, 2019, as discussed in Footnote No. 1 to the Fee Table. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class I Shares	\$146	\$ 718	\$1,317	\$2,938
Class N Shares	\$171	\$1,052	\$1,946	\$4,243

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. During the period of December 14, 2016 through September 30, 2017, the Fund’s portfolio turnover rate was 139% of the average value of its portfolio.

Principal Investment Strategies of the Fund

The Fund seeks to outperform, after expenses, the *Russell 1000*[®] *Index* while seeking to control its *tracking error* relative to this benchmark. The Fund will target a long-term average forecasted *tracking error* of 3% to 4% relative to the *Russell 1000*[®] *Index*. Actual realized *tracking error* will vary based on market conditions and other factors.

The Fund pursues its investment objective by investing, under normal market conditions, at least 80% of its net assets (including borrowings for investment purposes) in equity securities or equity-related instruments (together, “equity securities”) of large-cap companies. Equity securities include, but are not limited to, common stocks, exchange-traded funds and similar pooled investment vehicles, equity index futures and depositary receipts.

The Fund's portfolio will be managed by both overweighting and underweighting securities, industries, and sectors relative to the *Russell 1000[®] Index*. "Relaxed Constraint" in the Fund's name reflects the Fund's strategy to take long as well as short positions in the equity securities in which it invests, as opposed to a traditional "long-only" portfolio which does not establish short positions (*i.e.*, relaxing the "long-only" constraint). Selling securities short allows the Fund to reflect to a greater extent, compared to a long-only approach, the *Adviser's* views on securities it expects to underperform. Selling securities short also allows the Fund to establish additional long positions using the short sale proceeds, and thereby take greater advantage, compared to a long-only approach, of the *Adviser's* views on securities it expects to outperform. Through the reinvestment of the short sale proceeds, the Fund generally intends to target a long exposure of 130% of the Fund's net assets with a short exposure of 30% of the Fund's net assets. Actual long and short exposures, however, will vary according to market conditions. The Fund's long exposures are expected to range between 120% and 140% of the Fund's net assets. The Fund's short exposures are expected to range between 20% and 40% of the Fund's net assets.

The Fund, when taking a "long" equity position, will purchase a security that will benefit from an increase in the price of that security. When taking a "short" equity position, the Fund borrows the security from a third party and sells it at the then current market price. A "short" equity position will benefit from a decrease in price of the security and will lose value if the price of the security increases.

In constructing the Fund's portfolio, the *Adviser* utilizes a quantitative investment process. A quantitative investment process is a systematic method of evaluating securities and other assets by analyzing a variety of data through the use of models—or processes—to generate an investment opinion. The models consider a wide range of factors, including, but not limited to, value and *momentum*.

- Value strategies favor securities that appear cheap based on fundamental measures, often as a result of lack of favor. Examples of value strategies include using price-to-earnings and price-to-book ratios.
- *Momentum* strategies favor securities with strong recent performance and positive changes in fundamentals.

In addition to these two main factors, the *Adviser* may use a number of additional factors based on the *Adviser's* proprietary research, including but not limited to, quality, investor sentiment and management signaling. The *Adviser* may add to or modify the factors employed in selecting investments.

The *Adviser* determines the long or short weight of each equity security in the portfolio using portfolio optimization techniques, taking into account the *Adviser's* assessment of attractiveness of the equity security based on various factors, including those described above, stock weights in the benchmark index, estimated transaction costs associated with trading each equity security, and additional criteria that form part of the *Adviser's* security selection process.

The Fund generally invests in large-cap U.S. companies, which the *Adviser* generally considers to be those companies with market capitalizations within the range of the *Russell 1000[®] Index* at the time of purchase. The Fund may also invest in mid-cap securities.

The Fund invests significantly in equity securities. The Fund may also invest in or use financial futures contracts as well as exchange-traded funds and similar pooled investment vehicles, for hedging purposes, to gain exposure to the equity market and to maintain liquidity to pay for redemptions. A portion of the Fund's assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

As with equity positions, the Fund may also take "long" and "short" positions in derivative instruments, such as equity index futures contracts. A "long" position in a derivative instrument will benefit from an increase in the price of the underlying instrument. A "short" position in a derivative instrument will benefit from a decrease in price of the underlying instrument and will lose value if the price of the underlying instrument increases.

Principal Risks of Investing in the Fund

Risk is inherent in all investing. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly from day to day and over time. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. ***The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.*** The following is a summary description of certain risks of investing in the Fund.

Common Stock Risk: The Fund may invest in, or have exposure to, common stocks. Common stocks are subject to greater fluctuations in market value than certain other asset classes as a result of such factors as a company's business performance, investor perceptions, stock market trends and general economic conditions.

Counterparty Risk: The Fund may enter into various types of derivative contracts. Many of these derivative contracts will be privately negotiated in the over-the-counter market. These contracts also involve exposure to credit risk, since contract performance depends in part on the financial condition of the counterparty. If a privately negotiated over-the-counter contract calls for payments by the Fund, the Fund must be prepared to make such payments when due. In addition, if a counterparty's creditworthiness declines, the Fund may not receive payments owed under the contract, or such payments may be delayed under such circumstances and the value of agreements with such counterparty can be expected to decline, potentially resulting in losses to the Fund.

Derivatives Risk: In general, a derivative instrument typically involves leverage, *i.e.*, it provides exposure to potential gain or loss from a change in the level of the market price of the underlying security, currency or commodity (or a basket or index) in a notional amount that exceeds the amount of cash or assets required to establish or maintain the derivative instrument. Adverse changes in the value or level of the underlying asset or index, which the Fund may not directly own, can result in a loss to the Fund substantially greater than the amount invested in the derivative itself. The use of derivative instruments also exposes the Fund to additional risks and transaction costs. These instruments come in many varieties and have a wide range of potential risks and rewards, and may include, as further described in the section entitled "Principal Investment Strategies of the Fund," futures contracts. A risk of the Fund's use of derivatives is that the fluctuations in their values may not correlate perfectly with the overall securities markets. Additionally, to the extent the Fund is required to segregate or "set aside" (often referred to as "asset segregation") liquid assets or otherwise cover open positions with respect to certain derivative instruments, the Fund may be required to sell portfolio instruments to meet these asset segregation requirements. There is a possibility that segregation involving a large percentage of the Fund's assets could impede portfolio management or the Fund's ability to meet redemption requests or other current obligations.

Futures Contract Risk: The successful use of futures contracts draws upon the *Adviser's* skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of futures contracts, which may adversely affect the Fund's *NAV* and *total return*, are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the futures contract; (b) possible lack of a liquid secondary market for a futures contract and the resulting inability to close a futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the *Adviser's* inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

High Portfolio Turnover Risk: The investment techniques and strategies utilized by the Fund, including investments made on a shorter-term basis or in derivative instruments or instruments with a maturity of one year or less at the time of acquisition, may result in frequent portfolio trading and high portfolio turnover. High portfolio turnover rates will cause the Fund to incur higher levels of brokerage fees and commissions, which may reduce performance, and may cause higher levels of current tax liability to shareholders in the Fund.

Investment in Other Investment Companies Risk: As with other investments, investments in other investment companies, including exchange-traded funds ("ETFs"), are subject to market and manager risk. In addition, if the Fund acquires shares of investment companies, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies. The Fund may invest in money market *mutual funds*. An investment in a money market *mutual fund* is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Although money market *mutual funds* that invest in U.S. government securities seek to preserve the value of the Fund's investment at \$1.00 per share, it is possible to lose money by investing in a stable *NAV* money market *mutual fund*. Moreover, recent *SEC* rule amendments require prime money market *mutual funds* to use floating *NAVs* that do not preserve the value of the Fund's investment at \$1.00 per share. These rule amendments may impact the Fund's use of prime money market *mutual funds* for capital preservation purposes.

Leverage Risk: As part of the Fund's principal investment strategy, the Fund will enter into short sales and will make investments in futures contracts and other derivative instruments. These investment activities provide the economic effect of financial leverage by creating additional investment exposure to the underlying instrument, as well as the potential for greater loss. **If the Fund uses leverage through activities such as entering into short sales or purchasing derivative instruments, the Fund has the risk that losses may exceed the net assets of the Fund.** The net asset value of the Fund while employing leverage will be more volatile and sensitive to market movements.

Manager Risk: If the *Adviser* makes poor investment decisions, it will negatively affect the Fund's investment performance.

Market Risk: Market risk is the risk that the markets on which the Fund's investments trade will increase or decrease in value. Prices may fluctuate widely over short or extended periods in response to company, market or economic news. Markets also tend to move in cycles, with periods of rising and falling prices. If there is a general decline in the securities and other markets, your investment in the Fund may lose value, regardless of the individual results of the securities and other instruments in which the Fund invests.

Mid-Cap Securities Risk: The Fund may invest in, or have exposure to, the securities of mid-cap companies. The prices of securities of mid-cap companies generally are more volatile than those of large capitalization companies and are more likely to be adversely affected than large-cap companies by changes in earnings results and investor expectations or poor economic or market conditions, including those experienced during a recession.

Model and Data Risk: Given the complexity of the investments and strategies of the Fund, the *Adviser* relies heavily on quantitative models and information and data supplied by third parties ("Models and Data"). Models and Data are used to construct sets of transactions and investments, to provide risk management insights, and to assist in hedging the Fund's investments.

When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon expose the Fund to potential risks. Similarly, any hedging based on faulty Models and Data may prove to be unsuccessful. Some of the models used by the *Adviser* for the Fund are predictive in nature. The use of predictive models has inherent risks. Because predictive models are usually constructed based on historical data supplied by third parties, the success of relying on such models may depend heavily on the accuracy and reliability of the supplied historical data. The Fund bears the risk that the quantitative models used by the *Adviser* will not be successful in selecting companies for investment or in determining the weighting of investment positions that will enable the Fund to achieve its investment objective.

All models rely on correct market data inputs. If incorrect market data is entered into even a well-founded model, the resulting information will be incorrect. However, even if market data is input correctly, "model prices" will often differ substantially from market prices, especially for instruments with complex characteristics, such as derivative instruments.

Momentum Style Risk: Investing in or having exposure to securities with positive *momentum* entails investing in securities that have had above-average recent returns. These securities may be more volatile than a broad cross-section of securities. In addition, there may be periods during which the investment performance of the Fund while using a *momentum* strategy may suffer.

Short Sale Risk: The Fund enters into a short sale by selling a security it has borrowed (typically from a broker or other institution). If the market price of a security increases after the Fund borrows the security, the Fund will suffer a (potentially unlimited) loss when it replaces the borrowed security at the higher price. In certain cases, purchasing a security to cover a short position can itself cause the price of the security to rise further, thereby exacerbating the loss. In addition, the Fund may not always be able to borrow the security at a particular time or at an acceptable price. The Fund may also take a short position in a derivative instrument, such as a future, forward or swap. A short position in a derivative instrument involves the risk of a theoretically unlimited increase in the value of the underlying instrument, which could cause the Fund to suffer a (potentially unlimited) loss. Short sales also involve transaction and financing costs that will reduce potential Fund gains and increase potential Fund losses.

Value Style Risk: Investing in or having exposure to "value" securities presents the risk that the securities may never reach what the *Adviser* believes are their full market values, either because the market fails to recognize what the *Adviser* considers to be the security's true value or because the *Adviser* misjudged that value. In addition, there may be periods during which the investment performance of the Fund while using a value strategy may suffer.

Volatility Risk: The Fund may have investments that appreciate or decrease significantly in value over short periods of time. This may cause the Fund's net asset value per share to experience significant increases or declines in value over short periods of time, however, all investments long- or short-term are subject to risk of loss.

Performance Information

The performance information below shows summary performance information for the Fund in a bar chart and an average annual *total returns* table. The information shows you how the Fund's performance has varied year by year and provides some indication of the risks of investing in the Fund.

The Fund's past performance (before and after taxes), as provided by the bar chart and performance table that follows, is not an indication of future results. Updated information on the Fund's performance, including its current NAV per share, can be obtained by visiting <https://funds.aqr.com>.

Class I Shares—Total Returns

The bar chart below provides the Fund's performance for its first full calendar year.

Highest Quarterly Return

6.77% (4Q17)

Lowest Quarterly Return

3.49% (2Q17)

Average Annual Total Returns as of December 31, 2017

The following table compares the Fund's average annual *total returns* for Class I Shares and Class N Shares as of December 31, 2017 to the *Russell 1000[®] Index*. You cannot invest directly in an index. The table includes all applicable fees and sales charges.

	One Year	Since Inception (December 14, 2016)
AQR Large Cap Relaxed Constraint Equity Fund—Class I		
Return Before Taxes	21.99%	19.65%
Return After Taxes on Distributions	21.74%	19.41%
Return After Taxes on Distributions and Sale of Fund Shares	12.66%	14.99%
AQR Large Cap Relaxed Constraint Equity Fund—Class N		
Return Before Taxes	21.63%	19.31%
<i>Russell 1000[®] Index</i> (reflects no deductions for fees, expenses or taxes)	21.69%	20.00%

After-tax returns are calculated using the historical highest individual marginal tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns are not relevant to investors who hold their Fund shares through tax-deferred arrangements such as 401(k) plans or individual retirement accounts. After-tax returns are for Class I Shares only. After-tax returns for other classes will vary.

Investment Manager

The Fund's investment manager is AQR Capital Management, LLC.

AQR Small Cap Relaxed Constraint Equity Fund

Fund Summary — January 29, 2018

Investment Objective

The AQR Small Cap Relaxed Constraint Equity Fund (the “Fund”) seeks long-term capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

	Class I	Class N
Management Fee	0.80%	0.80%
Distribution (12b-1) Fee	None	0.25%
Other Expenses		
Dividends on short sales	0.43%	0.42%
All other expenses	5.39%	5.35%
Total Other Expenses	5.82%	5.77%
Acquired Fund Fees and Expenses	0.01%	0.01%
Total Annual Fund Operating Expenses	6.63%	6.83%
Less: Fee Waivers and/or Expense Reimbursements ¹	5.19%	5.15%
Total Annual Fund Operating Expenses after Fee Waivers and/or Expense Reimbursements	1.44%	1.68%

¹ The *Adviser* has contractually agreed to waive its management fee and/or to reimburse expenses of the Fund to the extent necessary to maintain the total annual fund operating expenses (excluding interest, taxes, dividends on short sales, borrowing costs, acquired fund fees and expenses, interest expense relating to short sales, expenses related to class action claims and extraordinary expenses) at no more than 1.00% for Class I Shares and 1.25% for Class N Shares (the “Fee Waiver Agreement”). This arrangement will continue at least through January 28, 2019. The Fee Waiver Agreement may only be terminated with the consent of the *Board of Trustees*, including a majority of the Trustees of the *Trust* who are not “interested persons” of the *Trust* within the meaning of the 1940 Act. The *Adviser* is entitled to recapture the fees waived and/or expenses reimbursed, only to the extent that the recapture can be made during the thirty-six months following the end of the month during which the *Adviser* waived fees or reimbursed expenses. In no case will the *Adviser* recapture any amount that would cause the aggregate operating expenses of the Fund attributable to a share class during a year in which a repayment is made to exceed the lesser of (i) the applicable limits in effect at the time of the waiver and/or reimbursement, or (ii) the applicable limits in effect at the time of recapture.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other *mutual funds*. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same and takes into account the effect of the Fee Waiver Agreement through January 28, 2019, as discussed in Footnote No. 1 to the Fee Table. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class I Shares	\$147	\$1,497	\$2,805	\$5,891
Class N Shares	\$171	\$1,556	\$2,892	\$6,022

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. During the period of December 14, 2016 through September 30, 2017, the Fund’s portfolio turnover rate was 124% of the average value of its portfolio.

Principal Investment Strategies of the Fund

The Fund seeks to outperform, after expenses, the *Russell 2000*[®] *Index* while seeking to control its *tracking error* relative to this benchmark. The Fund will target a long-term average forecasted *tracking error* of 4% to 5% relative to the *Russell 2000*[®] *Index*. Actual realized *tracking error* will vary based on market conditions and other factors.

The Fund pursues its investment objective by investing, under normal market conditions, at least 80% of its net assets (including borrowings for investment purposes) in equity securities or equity-related instruments (together, “equity securities”) of small-cap companies. Equity securities include, but are not limited to, common stocks, exchange-traded funds and similar pooled investment vehicles, equity index futures and depositary receipts.

The Fund's portfolio will be managed by both overweighting and underweighting securities, industries, and sectors relative to the *Russell 2000*[®] *Index*. "Relaxed Constraint" in the Fund's name reflects the Fund's strategy to take long as well as short positions in the equity securities in which it invests, as opposed to a traditional "long-only" portfolio which does not establish short positions (*i.e.*, relaxing the "long-only" constraint). Selling securities short allows the Fund to reflect to a greater extent, compared to a long-only approach, the *Adviser's* views on securities it expects to underperform. Selling securities short also allows the Fund to establish additional long positions using the short sale proceeds, and thereby take greater advantage, compared to a long-only approach, of the *Adviser's* views on securities it expects to outperform. Through the reinvestment of the short sale proceeds, the Fund generally intends to target a long exposure of 130% of the Fund's net assets with a short exposure of 30% of the Fund's net assets. Actual long and short exposures, however, will vary according to market conditions. The Fund's long exposures are expected to range between 120% and 140% of the Fund's net assets. The Fund's short exposures are expected to range between 20% and 40% of the Fund's net assets.

The Fund, when taking a "long" equity position, will purchase a security that will benefit from an increase in the price of that security. When taking a "short" equity position, the Fund borrows the security from a third party and sells it at the then current market price. A "short" equity position will benefit from a decrease in price of the security and will lose value if the price of the security increases.

In constructing the Fund's portfolio, the *Adviser* utilizes a quantitative investment process. A quantitative investment process is a systematic method of evaluating securities and other assets by analyzing a variety of data through the use of models—or processes—to generate an investment opinion. The models consider a wide range of factors, including, but not limited to, value and *momentum*.

- Value strategies favor securities that appear cheap based on fundamental measures, often as a result of lack of favor. Examples of value strategies include using price-to-earnings and price-to-book ratios.
- *Momentum* strategies favor securities with strong recent performance and positive changes in fundamentals.

In addition to these two main factors, the *Adviser* may use a number of additional factors based on the *Adviser's* proprietary research, including but not limited to, quality, investor sentiment and management signaling. The *Adviser* may add to or modify the factors employed in selecting investments.

The *Adviser* determines the long or short weight of each equity security in the portfolio using portfolio optimization techniques, taking into account the *Adviser's* assessment of attractiveness of the equity security based on various factors, including those described above, stock weights in the benchmark index, estimated transaction costs associated with trading each equity security, and additional criteria that form part of the *Adviser's* security selection process.

The Fund generally invests in small-cap U.S. companies, which the *Adviser* generally considers to be those companies with market capitalizations within the range of the *Russell 2000*[®] *Index* at the time of purchase.

The Fund invests significantly in equity securities. The Fund may also invest in or use financial futures contracts as well as exchange-traded funds and similar pooled investment vehicles, for hedging purposes, to gain exposure to the equity market and to maintain liquidity to pay for redemptions. A portion of the Fund's assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

As with equity positions, the Fund may also take "long" and "short" positions in derivative instruments, such as equity index futures contracts. A "long" position in a derivative instrument will benefit from an increase in the price of the underlying instrument. A "short" position in a derivative instrument will benefit from a decrease in price of the underlying instrument and will lose value if the price of the underlying instrument increases.

Principal Risks of Investing in the Fund

Risk is inherent in all investing. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly from day to day and over time. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. ***The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.*** The following is a summary description of certain risks of investing in the Fund.

Common Stock Risk: The Fund may invest in, or have exposure to, common stocks. Common stocks are subject to greater fluctuations in market value than certain other asset classes as a result of such factors as a company's business performance, investor perceptions, stock market trends and general economic conditions.

Counterparty Risk: The Fund may enter into various types of derivative contracts. Many of these derivative contracts will be privately negotiated in the over-the-counter market. These contracts also involve exposure to credit risk, since contract performance depends in part on the financial condition of the counterparty. If a privately negotiated over-the-counter contract calls for payments by the Fund, the Fund must be prepared to make such payments when due. In addition, if a counterparty's creditworthiness declines, the Fund may not receive payments owed under the contract, or such payments may be delayed under such circumstances and the value of agreements with such counterparty can be expected to decline, potentially resulting in losses to the Fund.

Derivatives Risk: In general, a derivative instrument typically involves leverage, *i.e.*, it provides exposure to potential gain or loss from a change in the level of the market price of the underlying security, currency or commodity (or a basket or index) in a notional amount that exceeds the amount of cash or assets required to establish or maintain the derivative instrument. Adverse changes in the value or level of the underlying asset or index, which the Fund may not directly own, can result in a loss to the Fund substantially greater than the amount invested in the derivative itself. The use of derivative instruments also exposes the Fund to additional risks and transaction costs. These instruments come in many varieties and have a wide range of potential risks and rewards, and may include, as further described in the section entitled "Principal Investment Strategies of the Fund," futures contracts. A risk of the Fund's use of derivatives is that the fluctuations in their values may not correlate perfectly with the overall securities markets. Additionally, to the extent the Fund is required to segregate or "set aside" (often referred to as "asset segregation") liquid assets or otherwise cover open positions with respect to certain derivative instruments, the Fund may be required to sell portfolio instruments to meet these asset segregation requirements. There is a possibility that segregation involving a large percentage of the Fund's assets could impede portfolio management or the Fund's ability to meet redemption requests or other current obligations.

Futures Contract Risk: The successful use of futures contracts draws upon the *Adviser's* skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of futures contracts, which may adversely affect the Fund's *NAV* and *total return*, are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the futures contract; (b) possible lack of a liquid secondary market for a futures contract and the resulting inability to close a futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the *Adviser's* inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

High Portfolio Turnover Risk: The investment techniques and strategies utilized by the Fund, including investments made on a shorter-term basis or in derivative instruments or instruments with a maturity of one year or less at the time of acquisition, may result in frequent portfolio trading and high portfolio turnover. High portfolio turnover rates will cause the Fund to incur higher levels of brokerage fees and commissions, which may reduce performance, and may cause higher levels of current tax liability to shareholders in the Fund.

Investment in Other Investment Companies Risk: As with other investments, investments in other investment companies, including exchange-traded funds ("ETFs"), are subject to market and manager risk. In addition, if the Fund acquires shares of investment companies, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies. The Fund may invest in money market *mutual funds*. An investment in a money market *mutual fund* is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Although money market *mutual funds* that invest in U.S. government securities seek to preserve the value of the Fund's investment at \$1.00 per share, it is possible to lose money by investing in a stable *NAV* money market *mutual fund*. Moreover, recent *SEC* rule amendments require prime money market *mutual funds* to use floating *NAVs* that do not preserve the value of the Fund's investment at \$1.00 per share. These rule amendments may impact the Fund's use of prime money market *mutual funds* for capital preservation purposes.

Leverage Risk: As part of the Fund's principal investment strategy, the Fund will enter into short sales and will make investments in futures contracts and other derivative instruments. These investment activities provide the economic effect of financial leverage by creating additional investment exposure to the underlying instrument, as well as the potential for greater loss. **If the Fund uses leverage through activities such as entering into short sales or purchasing derivative instruments, the Fund has the risk that losses may exceed the net assets of the Fund.** The net asset value of the Fund while employing leverage will be more volatile and sensitive to market movements.

Manager Risk: If the *Adviser* makes poor investment decisions, it will negatively affect the Fund's investment performance.

Market Risk: Market risk is the risk that the markets on which the Fund's investments trade will increase or decrease in value. Prices may fluctuate widely over short or extended periods in response to company, market or economic news. Markets also tend to move in cycles, with periods of rising and falling prices. If there is a general decline in the securities and other markets, your investment in the Fund may lose value, regardless of the individual results of the securities and other instruments in which the Fund invests.

Model and Data Risk: Given the complexity of the investments and strategies of the Fund, the *Adviser* relies heavily on quantitative models and information and data supplied by third parties ("Models and Data"). Models and Data are used to construct sets of transactions and investments, to provide risk management insights, and to assist in hedging the Fund's investments.

When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon expose the Fund to potential risks. Similarly, any hedging based on faulty Models and Data may prove to be unsuccessful. Some of the models used by the *Adviser* for the Fund are predictive in nature. The use of predictive models has inherent risks. Because predictive models are usually constructed based on historical data supplied by third parties, the success of relying on such models may depend heavily on the accuracy and reliability of the supplied historical data. The Fund bears the risk that the quantitative models used by the *Adviser* will not be successful in selecting companies for investment or in determining the weighting of investment positions that will enable the Fund to achieve its investment objective.

All models rely on correct market data inputs. If incorrect market data is entered into even a well-founded model, the resulting information will be incorrect. However, even if market data is input correctly, "model prices" will often differ substantially from market prices, especially for instruments with complex characteristics, such as derivative instruments.

Momentum Style Risk: Investing in or having exposure to securities with positive *momentum* entails investing in securities that have had above-average recent returns. These securities may be more volatile than a broad cross-section of securities. In addition, there may be periods during which the investment performance of the Fund while using a *momentum* strategy may suffer.

Short Sale Risk: The Fund enters into a short sale by selling a security it has borrowed (typically from a broker or other institution). If the market price of a security increases after the Fund borrows the security, the Fund will suffer a (potentially unlimited) loss when it replaces the borrowed security at the higher price. In certain cases, purchasing a security to cover a short position can itself cause the price of the security to rise further, thereby exacerbating the loss. In addition, the Fund may not always be able to borrow the security at a particular time or at an acceptable price. The Fund may also take a short position in a derivative instrument, such as a future, forward or swap. A short position in a derivative instrument involves the risk of a theoretically unlimited increase in the value of the underlying instrument, which could cause the Fund to suffer a (potentially unlimited) loss. Short sales also involve transaction and financing costs that will reduce potential Fund gains and increase potential Fund losses.

Small-Cap Securities Risk: Investments in or exposure to the securities of companies with smaller market capitalizations involve higher risks in some respects than do investments in securities of larger companies. For example, prices of such securities are often more volatile than prices of large capitalization securities. In addition, due to thin trading in some such securities, an investment in these securities may be more illiquid (*i.e.*, harder to sell) than that of larger capitalization securities. Smaller capitalization companies also fail more often than larger companies and may have more limited management and financial resources than larger companies.

Value Style Risk: Investing in or having exposure to "value" securities presents the risk that the securities may never reach what the *Adviser* believes are their full market values, either because the market fails to recognize what the *Adviser* considers to be the security's true value or because the *Adviser* misjudged that value. In addition, there may be periods during which the investment performance of the Fund while using a value strategy may suffer.

Volatility Risk: The Fund may have investments that appreciate or decrease significantly in value over short periods of time. This may cause the Fund's net asset value per share to experience significant increases or declines in value over short periods of time, however, all investments long- or short-term are subject to risk of loss.

Performance Information

The performance information below shows summary performance information for the Fund in a bar chart and an average annual *total returns* table. The information shows you how the Fund's performance has varied year by year and provides some indication of the risks of investing in the Fund.

The Fund's past performance (before and after taxes), as provided by the bar chart and performance table that follows, is not an indication of future results. Updated information on the Fund's performance, including its current NAV per share, can be obtained by visiting <https://funds.aqr.com>.

Class I Shares—Total Returns

The bar chart below provides the Fund's performance for its first full calendar year.

Highest Quarterly Return

6.92% (3Q17)

Lowest Quarterly Return

-1.71% (1Q17)

Average Annual Total Returns as of December 31, 2017

The following table compares the Fund's average annual *total returns* for Class I Shares and Class N Shares as of December 31, 2017 to the *Russell 2000*[®] *Index*. You cannot invest directly in an index. The table includes all applicable fees and sales charges.

	One Year	Since Inception (December 14, 2016)
AQR Small Cap Relaxed Constraint Equity Fund—Class I		
Return Before Taxes	5.28%	4.43%
Return After Taxes on Distributions	5.02%	4.19%
Return After Taxes on Distributions and Sale of Fund Shares	3.20%	3.38%
AQR Small Cap Relaxed Constraint Equity Fund—Class N		
Return Before Taxes	5.01%	4.18%
<i>Russell 2000</i> [®] <i>Index</i> (reflects no deductions for fees, expenses or taxes)	14.65%	14.15%

After-tax returns are calculated using the historical highest individual marginal tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns are not relevant to investors who hold their Fund shares through tax-deferred arrangements such as 401(k) plans or individual retirement accounts. After-tax returns are for Class I Shares only. After-tax returns for other classes will vary.

Investment Manager

The Fund's investment manager is AQR Capital Management, LLC.

AQR International Relaxed Constraint Equity Fund

Fund Summary – January 29, 2018

Investment Objective

The AQR International Relaxed Constraint Equity Fund (the “Fund”) seeks long-term capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

	Class I	Class N
Management Fee	0.75%	0.75%
Distribution (12b-1) Fee	None	0.25%
Other Expenses		
Dividends on short sales	0.94%	0.94%
All other expenses	2.12%	2.25%
Total Other Expenses	3.06%	3.19%
Acquired Fund Fees and Expenses	0.02%	0.02%
Total Annual Fund Operating Expenses	3.83%	4.21%
Less: Fee Waivers and/or Expense Reimbursements ¹	1.92%	2.05%
Total Annual Fund Operating Expenses after Fee Waivers and/or Expense Reimbursements	1.91%	2.16%

¹ The *Adviser* has contractually agreed to waive its management fee and/or to reimburse expenses of the Fund to the extent necessary to maintain the total annual fund operating expenses (excluding interest, taxes, dividends on short sales, borrowing costs, acquired fund fees and expenses, interest expense relating to short sales, expenses related to class action claims and extraordinary expenses) at no more than 0.95% for Class I Shares and 1.20% for Class N Shares (the “Fee Waiver Agreement”). This arrangement will continue at least through January 28, 2019. The Fee Waiver Agreement may only be terminated with the consent of the *Board of Trustees*, including a majority of the Trustees of the *Trust* who are not “interested persons” of the *Trust* within the meaning of the 1940 Act. The *Adviser* is entitled to recapture the fees waived and/or expenses reimbursed, only to the extent that the recapture can be made during the thirty-six months following the end of the month during which the *Adviser* waived fees or reimbursed expenses. In no case will the *Adviser* recapture any amount that would cause the aggregate operating expenses of the Fund attributable to a share class during a year in which a repayment is made to exceed the lesser of (i) the applicable limits in effect at the time of the waiver and/or reimbursement, or (ii) the applicable limits in effect at the time of recapture.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other *mutual funds*. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same and takes into account the effect of the Fee Waiver Agreement through January 28, 2019, as discussed in Footnote No. 1 to the Fee Table. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class I Shares	\$194	\$ 993	\$1,811	\$3,940
Class N Shares	\$219	\$1,092	\$1,978	\$4,257

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. During the period of December 14, 2016 through September 30, 2017, the Fund’s portfolio turnover rate was 162% of the average value of its portfolio.

Principal Investment Strategies of the Fund

The Fund seeks to outperform, after expenses, the *MSCI EAFE Index* while seeking to control its *tracking error* relative to this benchmark. The Fund will target a long-term average forecasted *tracking error* of 3% to 4% relative to the *MSCI EAFE Index*. Actual realized *tracking error* will vary based on market conditions and other factors.

The Fund pursues its investment objective by investing, under normal market conditions, at least 80% of its net assets (including borrowings for investment purposes) in equity securities or equity-related instruments (together, “equity securities”) of non-U.S. companies. Equity securities include, but are not limited to, common stocks, exchange-traded funds and similar pooled investment vehicles, equity index futures and depositary receipts.

The Fund's portfolio will be managed by both overweighting and underweighting securities, industries, and sectors relative to the *MSCI EAFE Index*. "Relaxed Constraint" in the Fund's name reflects the Fund's strategy to take long as well as short positions in the equity securities in which it invests, as opposed to a traditional "long-only" portfolio which does not establish short positions (*i.e.*, relaxing the "long-only" constraint). Selling securities short allows the Fund to reflect to a greater extent, compared to a long-only approach, the *Adviser's* views on securities it expects to underperform. Selling securities short also allows the Fund to establish additional long positions using the short sale proceeds, and thereby take greater advantage, compared to a long-only approach, of the *Adviser's* views on securities it expects to outperform. Through the reinvestment of the short sale proceeds, the Fund generally intends to target a long exposure of 130% of the Fund's net assets with a short exposure of 30% of the Fund's net assets. Actual long and short exposures, however, will vary according to market conditions. The Fund's long exposures are expected to range between 120% and 140% of the Fund's net assets. The Fund's short exposures are expected to range between 20% and 40% of the Fund's net assets.

The Fund, when taking a "long" equity position, will purchase a security that will benefit from an increase in the price of that security. When taking a "short" equity position, the Fund borrows the security from a third party and sells it at the then current market price. A "short" equity position will benefit from a decrease in price of the security and will lose value if the price of the security increases.

In constructing the Fund's portfolio, the *Adviser* utilizes a quantitative investment process. A quantitative investment process is a systematic method of evaluating securities and other assets by analyzing a variety of data through the use of models—or processes—to generate an investment opinion. The models consider a wide range of factors, including, but not limited to, value and *momentum*.

- Value strategies favor securities that appear cheap based on fundamental measures, often as a result of lack of favor. Examples of value strategies include using price-to-earnings and price-to-book ratios.
- *Momentum* strategies favor securities with strong recent performance and positive changes in fundamentals.

In addition to these two main factors, the *Adviser* may use a number of additional factors based on the *Adviser's* proprietary research, including but not limited to, quality, investor sentiment and management signaling. The *Adviser* may add to or modify the factors employed in selecting investments.

The *Adviser* determines the long or short weight of each equity security in the portfolio using portfolio optimization techniques, taking into account the *Adviser's* assessment of attractiveness of the equity security based on various factors, including those described above, stock weights in the benchmark index, estimated transaction costs associated with trading each equity security, and additional criteria that form part of the *Adviser's* security selection process.

The Fund generally invests in large- and mid-cap companies included in the *MSCI EAFE Index* or located in countries included in the *MSCI EAFE Index* at the time of purchase. The Fund considers large- and mid-cap companies to be companies with market capitalizations within the range of the constituents of the *MSCI EAFE Index* at the time of purchase.

The Fund invests significantly in equity securities. The Fund may also invest in or use financial futures contracts, forward foreign currency contracts as well as foreign currencies, exchange-traded funds and similar pooled investment vehicles, for hedging purposes, to gain exposure to the equity market and to maintain liquidity to pay for redemptions. A portion of the Fund's assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

As with equity positions, the Fund may also take "long" and "short" positions in derivative instruments, such as equity index futures contracts or forward foreign currency contracts. A "long" position in a derivative instrument will benefit from an increase in the price of the underlying instrument. A "short" position in a derivative instrument will benefit from a decrease in price of the underlying instrument and will lose value if the price of the underlying instrument increases.

Principal Risks of Investing in the Fund

Risk is inherent in all investing. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly from day to day and over time. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. ***The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.*** The following is a summary description of certain risks of investing in the Fund.

Common Stock Risk: The Fund may invest in, or have exposure to, common stocks. Common stocks are subject to greater fluctuations in market value than certain other asset classes as a result of such factors as a company's business performance, investor perceptions, stock market trends and general economic conditions.

Counterparty Risk: The Fund may enter into various types of derivative contracts. Many of these derivative contracts will be privately negotiated in the over-the-counter market. These contracts also involve exposure to credit risk, since contract performance depends in part on the financial condition of the counterparty. If a privately negotiated over-the-counter contract calls for payments by the Fund, the Fund must be prepared to make such payments when due. In addition, if a counterparty's creditworthiness declines, the Fund may not receive payments owed under the contract, or such payments may be delayed under such circumstances and the value of agreements with such counterparty can be expected to decline, potentially resulting in losses to the Fund.

Currency Risk: Currency risk is the risk that changes in currency exchange rates will negatively affect securities denominated in, and/or receiving revenues in, foreign currencies. The liquidity and trading value of foreign currencies could be affected by global economic factors, such as inflation, interest rate levels, and trade balances among countries, as well as the actions of sovereign governments and central banks. Adverse changes in currency exchange rates (relative to the U.S. dollar) may erode or reverse any potential gains from the Fund's investments in securities denominated in a foreign currency or may widen existing losses.

Derivatives Risk: In general, a derivative instrument typically involves leverage, *i.e.*, it provides exposure to potential gain or loss from a change in the level of the market price of the underlying security, currency or commodity (or a basket or index) in a notional amount that exceeds the amount of cash or assets required to establish or maintain the derivative instrument. Adverse changes in the value or level of the underlying asset or index, which the Fund may not directly own, can result in a loss to the Fund substantially greater than the amount invested in the derivative itself. The use of derivative instruments also exposes the Fund to additional risks and transaction costs. These instruments come in many varieties and have a wide range of potential risks and rewards, and may include, as further described in the section entitled "Principal Investment Strategies of the Fund," futures contracts and forward foreign currency contracts. A risk of the Fund's use of derivatives is that the fluctuations in their values may not correlate perfectly with the overall securities markets. Additionally, to the extent the Fund is required to segregate or "set aside" (often referred to as "asset segregation") liquid assets or otherwise cover open positions with respect to certain derivative instruments, the Fund may be required to sell portfolio instruments to meet these asset segregation requirements. There is a possibility that segregation involving a large percentage of the Fund's assets could impede portfolio management or the Fund's ability to meet redemption requests or other current obligations.

Foreign Investments Risk: Foreign investments often involve special risks not present in U.S. investments that can increase the chances that the Fund will lose money. These risks include:

- The Fund generally holds its foreign instruments and cash in foreign banks and securities depositories, which may be recently organized or new to the foreign custody business and may be subject to only limited or no regulatory oversight.
- Changes in foreign currency exchange rates can affect the value of the Fund's portfolio.
- The economies of certain foreign markets may not compare favorably with the economy of the United States with respect to such issues as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- The governments of certain countries may prohibit or impose substantial restrictions on foreign investments in their capital markets or in certain industries.
- Many foreign governments do not supervise and regulate stock exchanges, brokers and the sale of securities to the same extent as does the United States and may not have laws to protect investors that are comparable to U.S. securities laws.
- Settlement and clearance procedures in certain foreign markets may result in delays in payment for or delivery of securities not typically associated with settlement and clearance of U.S. investments.

Forward and Futures Contract Risk: The successful use of forward and futures contracts draws upon the *Adviser's* skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of forward and futures contracts, which may adversely affect the Fund's *NAV* and *total return*, are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the *Adviser's* inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

High Portfolio Turnover Risk: The investment techniques and strategies utilized by the Fund, including investments made on a shorter-term basis or in derivative instruments or instruments with a maturity of one year or less at the time of acquisition, may result in frequent portfolio trading and high portfolio turnover. High portfolio turnover rates will cause the Fund to incur higher levels of brokerage fees and commissions, which may reduce performance, and may cause higher levels of current tax liability to shareholders in the Fund.

Investment in Other Investment Companies Risk: As with other investments, investments in other investment companies, including exchange-traded funds (“ETFs”), are subject to market and manager risk. In addition, if the Fund acquires shares of investment companies, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies. The Fund may invest in money market *mutual funds*. An investment in a money market *mutual fund* is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Although money market *mutual funds* that invest in U.S. government securities seek to preserve the value of the Fund’s investment at \$1.00 per share, it is possible to lose money by investing in a stable NAV money market *mutual fund*. Moreover, recent SEC rule amendments require prime money market *mutual funds* to use floating NAVs that do not preserve the value of the Fund’s investment at \$1.00 per share. These rule amendments may impact the Fund’s use of prime money market *mutual funds* for capital preservation purposes.

Leverage Risk: As part of the Fund’s principal investment strategy, the Fund will enter into short sales and will make investments in futures contracts, forward foreign currency contracts and other derivative instruments. These investment activities provide the economic effect of financial leverage by creating additional investment exposure to the underlying instrument, as well as the potential for greater loss. **If the Fund uses leverage through activities such as entering into short sales or purchasing derivative instruments, the Fund has the risk that losses may exceed the net assets of the Fund.** The net asset value of the Fund while employing leverage will be more volatile and sensitive to market movements.

Manager Risk: If the *Adviser* makes poor investment decisions, it will negatively affect the Fund’s investment performance.

Market Risk: Market risk is the risk that the markets on which the Fund’s investments trade will increase or decrease in value. Prices may fluctuate widely over short or extended periods in response to company, market or economic news. Markets also tend to move in cycles, with periods of rising and falling prices. If there is a general decline in the securities and other markets, your investment in the Fund may lose value, regardless of the individual results of the securities and other instruments in which the Fund invests.

Mid-Cap Securities Risk: The Fund may invest in, or have exposure to, the securities of mid-cap companies. The prices of securities of mid-cap companies generally are more volatile than those of large capitalization companies and are more likely to be adversely affected than large-cap companies by changes in earnings results and investor expectations or poor economic or market conditions, including those experienced during a recession.

Model and Data Risk: Given the complexity of the investments and strategies of the Fund, the *Adviser* relies heavily on quantitative models and information and data supplied by third parties (“Models and Data”). Models and Data are used to construct sets of transactions and investments, to provide risk management insights, and to assist in hedging the Fund’s investments.

When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon expose the Fund to potential risks. Similarly, any hedging based on faulty Models and Data may prove to be unsuccessful. Some of the models used by the *Adviser* for the Fund are predictive in nature. The use of predictive models has inherent risks. Because predictive models are usually constructed based on historical data supplied by third parties, the success of relying on such models may depend heavily on the accuracy and reliability of the supplied historical data. The Fund bears the risk that the quantitative models used by the *Adviser* will not be successful in selecting companies for investment or in determining the weighting of investment positions that will enable the Fund to achieve its investment objective.

All models rely on correct market data inputs. If incorrect market data is entered into even a well-founded model, the resulting information will be incorrect. However, even if market data is input correctly, “model prices” will often differ substantially from market prices, especially for instruments with complex characteristics, such as derivative instruments.

Momentum Style Risk: Investing in or having exposure to securities with positive *momentum* entails investing in securities that have had above-average recent returns. These securities may be more volatile than a broad cross-section of securities. In addition, there may be periods during which the investment performance of the Fund while using a *momentum* strategy may suffer.

Short Sale Risk: The Fund enters into a short sale by selling a security it has borrowed (typically from a broker or other institution). If the market price of a security increases after the Fund borrows the security, the Fund will suffer a (potentially unlimited) loss when it replaces the borrowed security at the higher price. In certain cases, purchasing a security to cover a short position can itself cause the price of the security to rise further, thereby exacerbating the loss.

In addition, the Fund may not always be able to borrow the security at a particular time or at an acceptable price. The Fund may also take a short position in a derivative instrument, such as a future, forward or swap. A short position in a derivative instrument involves the risk of a theoretically unlimited increase in the value of the underlying instrument, which could cause the Fund to suffer a (potentially unlimited) loss. Short sales also involve transaction and financing costs that will reduce potential Fund gains and increase potential Fund losses.

Value Style Risk: Investing in or having exposure to “value” securities presents the risk that the securities may never reach what the *Adviser* believes are their full market values, either because the market fails to recognize what the *Adviser* considers to be the security’s true value or because the *Adviser* misjudged that value. In addition, there may be periods during which the investment performance of the Fund while using a value strategy may suffer.

Volatility Risk: The Fund may have investments that appreciate or decrease significantly in value over short periods of time. This may cause the Fund’s net asset value per share to experience significant increases or declines in value over short periods of time, however, all investments long- or short-term are subject to risk of loss.

Performance Information

The performance information below shows summary performance information for the Fund in a bar chart and an average annual *total returns* table. The information shows you how the Fund’s performance has varied year by year and provides some indication of the risks of investing in the Fund.

The Fund’s past performance (before and after taxes), as provided by the bar chart and performance table that follows, is not an indication of future results. Updated information on the Fund’s performance, including its current NAV per share, can be obtained by visiting <https://funds.aqr.com>.

Class I Shares—Total Returns

The bar chart below provides the Fund’s performance for its first full calendar year.

Highest Quarterly Return

8.87% (1Q17)

Lowest Quarterly Return

2.55% (4Q17)

Average Annual Total Returns as of December 31, 2017

The following table compares the Fund’s average annual *total returns* for Class I Shares and Class N Shares as of December 31, 2017 to the *MSCI EAFE Index*. You cannot invest directly in an index. The table includes all applicable fees and sales charges.

	One Year	Since Inception (December 14, 2016)
AQR International Relaxed Constraint Equity Fund—Class I		
Return Before Taxes	28.92%	29.30%
Return After Taxes on Distributions	28.71%	29.10%
Return After Taxes on Distributions and Sale of Fund Shares	16.61%	22.39%
AQR International Relaxed Constraint Equity Fund—Class N		
Return Before Taxes	28.54%	28.94%
<i>MSCI EAFE Index</i> (reflects no deductions for fees, expenses or taxes)	25.03%	23.04%

After-tax returns are calculated using the historical highest individual marginal tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor’s tax situation and may differ from those shown, and after-tax returns are not relevant to investors who hold their Fund shares through tax-deferred arrangements such as 401(k) plans or individual retirement accounts. After-tax returns are for Class I Shares only. After-tax returns for other classes will vary.

Investment Manager

The Fund's investment manager is AQR Capital Management, LLC.

Portfolio Managers

Name	Portfolio Manager of the Fund Since	Title
Michele L. Aghassi, Ph.D.	December 14, 2016	Principal of the <i>Adviser</i>
Andrea Frazzini, Ph.D., M.S.	December 14, 2016	Principal of the <i>Adviser</i>

AQR Emerging Relaxed Constraint Equity Fund

Fund Summary – January 29, 2018

Investment Objective

The AQR Emerging Relaxed Constraint Equity Fund (the “Fund”) seeks long-term capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

	Class I	Class N
Management Fee	0.95%	0.95%
Distribution (12b-1) Fee	None	0.25%
Other Expenses	2.87%	2.96%
Acquired Fund Fees and Expenses	0.07%	0.07%
Total Annual Fund Operating Expenses	3.89%	4.23%
Less: Fee Waivers and/or Expense Reimbursements ¹	2.67%	2.76%
Total Annual Fund Operating Expenses after Fee Waivers and/or Expense Reimbursements	1.22%	1.47%

¹ The *Adviser* has contractually agreed to waive its management fee and/or to reimburse expenses of the Fund to the extent necessary to maintain the total annual fund operating expenses (excluding interest, taxes, dividends on short sales, borrowing costs, acquired fund fees and expenses, interest expense relating to short sales, expenses related to class action claims and extraordinary expenses) at no more than 1.15% for Class I Shares and 1.40% for Class N Shares (the “Fee Waiver Agreement”). This arrangement will continue at least through January 28, 2019. The Fee Waiver Agreement may only be terminated with the consent of the *Board of Trustees*, including a majority of the Trustees of the *Trust* who are not “interested persons” of the *Trust* within the meaning of the *1940 Act*. The *Adviser* is entitled to recapture the fees waived and/or expenses reimbursed, only to the extent that the recapture can be made during the thirty-six months following the end of the month during which the *Adviser* waived fees or reimbursed expenses. In no case will the *Adviser* recapture any amount that would cause the aggregate operating expenses of the Fund attributable to a share class during a year in which a repayment is made to exceed the lesser of (i) the applicable limits in effect at the time of the waiver and/or reimbursement, or (ii) the applicable limits in effect at the time of recapture.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other *mutual funds*. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same and takes into account the effect of the Fee Waiver Agreement through January 28, 2019, as discussed in Footnote No. 1 to the Fee Table. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class I Shares	\$124	\$ 941	\$1,775	\$3,944
Class N Shares	\$150	\$1,032	\$1,928	\$4,230

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. During the period of December 14, 2016 through September 30, 2017, the Fund’s portfolio turnover rate was 114% of the average value of its portfolio.

Principal Investment Strategies of the Fund

The Fund seeks to outperform, after expenses, the *MSCI Emerging Markets Index* while seeking to control its *tracking error* relative to this benchmark. The Fund will target a long-term average forecasted *tracking error* of 4% to 6% relative to the *MSCI Emerging Markets Index*. Actual realized *tracking error* will vary based on market conditions and other factors.

The Fund pursues its investment objective by investing, under normal market conditions, at least 80% of its net assets (including borrowings for investment purposes) in equity securities or equity-related instruments (together, “equity securities”) of emerging market companies. Equity securities include, but are not limited to, common stocks, exchange-traded funds and similar pooled investment vehicles, equity index futures, equity swaps and depositary receipts.

The Fund's portfolio will be managed by both overweighting and underweighting securities, industries, and sectors relative to the *MSCI Emerging Markets Index*. "Relaxed Constraint" in the Fund's name reflects the Fund's strategy to take long as well as short positions in the equity securities in which it invests, as opposed to a traditional "long-only" portfolio which does not establish short positions (*i.e.*, relaxing the "long-only" constraint). Selling securities short allows the Fund to reflect to a greater extent, compared to a long-only approach, the *Adviser's* views on securities it expects to underperform. Selling securities short also allows the Fund to establish additional long positions using the short sale proceeds, and thereby take greater advantage, compared to a long-only approach, of the *Adviser's* views on securities it expects to outperform. Through the reinvestment of the short sale proceeds, the Fund generally intends to target a long exposure of 130% of the Fund's net assets with a short exposure of 30% of the Fund's net assets. Actual long and short exposures, however, will vary according to market conditions. The Fund's long exposures are expected to range between 120% and 140% of the Fund's net assets. The Fund's short exposures are expected to range between 20% and 40% of the Fund's net assets.

The Fund, when taking a "long" equity position, will purchase a security that will benefit from an increase in the price of that security. When taking a "short" equity position, the Fund borrows the security from a third party and sells it at the then current market price. A "short" equity position will benefit from a decrease in price of the security and will lose value if the price of the security increases.

In constructing the Fund's portfolio, the *Adviser* utilizes a quantitative investment process. A quantitative investment process is a systematic method of evaluating securities and other assets by analyzing a variety of data through the use of models—or processes—to generate an investment opinion. The models consider a wide range of factors, including, but not limited to, value and *momentum*.

- Value strategies favor securities that appear cheap based on fundamental measures, often as a result of lack of favor. Examples of value strategies include using price-to-earnings and price-to-book ratios.
- *Momentum* strategies favor securities with strong recent performance and positive changes in fundamentals.

In addition to these two main factors, the *Adviser* may use a number of additional factors based on the *Adviser's* proprietary research, including but not limited to, quality, investor sentiment and management signaling. The *Adviser* may add to or modify the factors employed in selecting investments.

The *Adviser* determines the long or short weight of each equity security in the portfolio using portfolio optimization techniques, taking into account the *Adviser's* assessment of attractiveness of the equity security based on various factors, including those described above, stock weights in the benchmark index, estimated transaction costs associated with trading each equity security, and additional criteria that form part of the *Adviser's* security selection process.

The Fund generally invests in large- and mid-cap companies included in the *MSCI Emerging Markets Index* or located in countries included in the *MSCI Emerging Markets Index* at the time of purchase. The Fund considers large- and mid-cap companies to be companies with market capitalizations within the range of the constituents of the *MSCI Emerging Markets Index* at the time of purchase.

The Fund invests significantly in equity securities. The Fund may also invest in or use financial futures contracts, forward foreign currency contracts, equity swaps as well as foreign currencies, exchange-traded funds and similar pooled investment vehicles, for hedging purposes, to gain exposure to the equity market and to maintain liquidity to pay for redemptions. A portion of the Fund's assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

As with equity positions, the Fund may also take "long" and "short" positions in derivative instruments, such as equity index futures contracts, forward foreign currency contracts or equity swaps. A "long" position in a derivative instrument will benefit from an increase in the price of the underlying instrument. A "short" position in a derivative instrument will benefit from a decrease in price of the underlying instrument and will lose value if the price of the underlying instrument increases.

Principal Risks of Investing in the Fund

Risk is inherent in all investing. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly from day to day and over time. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. ***The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.*** The following is a summary description of certain risks of investing in the Fund.

Common Stock Risk: The Fund may invest in, or have exposure to, common stocks. Common stocks are subject to greater fluctuations in market value than certain other asset classes as a result of such factors as a company's business performance, investor perceptions, stock market trends and general economic conditions.

Counterparty Risk: The Fund may enter into various types of derivative contracts. Many of these derivative contracts will be privately negotiated in the over-the-counter market. These contracts also involve exposure to credit risk, since contract performance depends in part on the financial condition of the counterparty. If a privately negotiated over-the-counter contract calls for payments by the Fund, the Fund must be prepared to make such payments when due. In addition, if a counterparty's creditworthiness declines, the Fund may not receive payments owed under the contract, or such payments may be delayed under such circumstances and the value of agreements with such counterparty can be expected to decline, potentially resulting in losses to the Fund.

Currency Risk: Currency risk is the risk that changes in currency exchange rates will negatively affect securities denominated in, and/or receiving revenues in, foreign currencies. The liquidity and trading value of foreign currencies could be affected by global economic factors, such as inflation, interest rate levels, and trade balances among countries, as well as the actions of sovereign governments and central banks. Adverse changes in currency exchange rates (relative to the U.S. dollar) may erode or reverse any potential gains from the Fund's investments in securities denominated in a foreign currency or may widen existing losses.

Derivatives Risk: In general, a derivative instrument typically involves leverage, *i.e.*, it provides exposure to potential gain or loss from a change in the level of the market price of the underlying security, currency or commodity (or a basket or index) in a notional amount that exceeds the amount of cash or assets required to establish or maintain the derivative instrument. Adverse changes in the value or level of the underlying asset or index, which the Fund may not directly own, can result in a loss to the Fund substantially greater than the amount invested in the derivative itself. The use of derivative instruments also exposes the Fund to additional risks and transaction costs. These instruments come in many varieties and have a wide range of potential risks and rewards, and may include, as further described in the section entitled "Principal Investment Strategies of the Fund," futures contracts, forward foreign currency contracts and swaps. A risk of the Fund's use of derivatives is that the fluctuations in their values may not correlate perfectly with the overall securities markets. Additionally, to the extent the Fund is required to segregate or "set aside" (often referred to as "asset segregation") liquid assets or otherwise cover open positions with respect to certain derivative instruments, the Fund may be required to sell portfolio instruments to meet these asset segregation requirements. There is a possibility that segregation involving a large percentage of the Fund's assets could impede portfolio management or the Fund's ability to meet redemption requests or other current obligations.

Emerging Market Risk: The Fund intends to have exposure to emerging markets. Emerging markets are riskier than more developed markets because they tend to develop unevenly and may never fully develop. Investments in emerging markets may be considered speculative. Emerging markets are more likely to experience hyperinflation and currency devaluations, which adversely affect returns to U.S. investors. In addition, many emerging securities markets have far lower trading volumes and less liquidity than developed markets.

Foreign Investments Risk: Foreign investments often involve special risks not present in U.S. investments that can increase the chances that the Fund will lose money. These risks include:

- The Fund generally holds its foreign instruments and cash in foreign banks and securities depositories, which may be recently organized or new to the foreign custody business and may be subject to only limited or no regulatory oversight.
- Changes in foreign currency exchange rates can affect the value of the Fund's portfolio.
- The economies of certain foreign markets may not compare favorably with the economy of the United States with respect to such issues as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- The governments of certain countries may prohibit or impose substantial restrictions on foreign investments in their capital markets or in certain industries.
- Many foreign governments do not supervise and regulate stock exchanges, brokers and the sale of securities to the same extent as does the United States and may not have laws to protect investors that are comparable to U.S. securities laws.
- Settlement and clearance procedures in certain foreign markets may result in delays in payment for or delivery of securities not typically associated with settlement and clearance of U.S. investments.

Forward and Futures Contract Risk: The successful use of forward and futures contracts draws upon the *Adviser's* skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of forward and futures contracts, which may adversely affect the Fund's *NAV* and *total return*, are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the *Adviser's* inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty will

default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

High Portfolio Turnover Risk: The investment techniques and strategies utilized by the Fund, including investments made on a shorter-term basis or in derivative instruments or instruments with a maturity of one year or less at the time of acquisition, may result in frequent portfolio trading and high portfolio turnover. High portfolio turnover rates will cause the Fund to incur higher levels of brokerage fees and commissions, which may reduce performance, and may cause higher levels of current tax liability to shareholders in the Fund.

Investment in Other Investment Companies Risk: As with other investments, investments in other investment companies, including exchange-traded funds (“ETFs”), are subject to market and manager risk. In addition, if the Fund acquires shares of investment companies, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies. The Fund may invest in money market *mutual funds*. An investment in a money market *mutual fund* is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Although money market *mutual funds* that invest in U.S. government securities seek to preserve the value of the Fund’s investment at \$1.00 per share, it is possible to lose money by investing in a stable NAV money market *mutual fund*. Moreover, recent SEC rule amendments require prime money market *mutual funds* to use floating NAVs that do not preserve the value of the Fund’s investment at \$1.00 per share. These rule amendments may impact the Fund’s use of prime money market *mutual funds* for capital preservation purposes.

Leverage Risk: As part of the Fund’s principal investment strategy, the Fund will enter into short sales and will make investments in futures contracts, forward foreign currency contracts, swaps and other derivative instruments. These investment activities provide the economic effect of financial leverage by creating additional investment exposure to the underlying instrument, as well as the potential for greater loss. **If the Fund uses leverage through activities such as entering into short sales or purchasing derivative instruments, the Fund has the risk that losses may exceed the net assets of the Fund.** The net asset value of the Fund while employing leverage will be more volatile and sensitive to market movements.

Manager Risk: If the *Adviser* makes poor investment decisions, it will negatively affect the Fund’s investment performance.

Market Risk: Market risk is the risk that the markets on which the Fund’s investments trade will increase or decrease in value. Prices may fluctuate widely over short or extended periods in response to company, market or economic news. Markets also tend to move in cycles, with periods of rising and falling prices. If there is a general decline in the securities and other markets, your investment in the Fund may lose value, regardless of the individual results of the securities and other instruments in which the Fund invests.

Mid-Cap Securities Risk: The Fund may invest in, or have exposure to, the securities of mid-cap companies. The prices of securities of mid-cap companies generally are more volatile than those of large capitalization companies and are more likely to be adversely affected than large-cap companies by changes in earnings results and investor expectations or poor economic or market conditions, including those experienced during a recession.

Model and Data Risk: Given the complexity of the investments and strategies of the Fund, the *Adviser* relies heavily on quantitative models and information and data supplied by third parties (“Models and Data”). Models and Data are used to construct sets of transactions and investments, to provide risk management insights, and to assist in hedging the Fund’s investments.

When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon expose the Fund to potential risks. Similarly, any hedging based on faulty Models and Data may prove to be unsuccessful. Some of the models used by the *Adviser* for the Fund are predictive in nature. The use of predictive models has inherent risks. Because predictive models are usually constructed based on historical data supplied by third parties, the success of relying on such models may depend heavily on the accuracy and reliability of the supplied historical data. The Fund bears the risk that the quantitative models used by the *Adviser* will not be successful in selecting companies for investment or in determining the weighting of investment positions that will enable the Fund to achieve its investment objective.

All models rely on correct market data inputs. If incorrect market data is entered into even a well-founded model, the resulting information will be incorrect. However, even if market data is input correctly, “model prices” will often differ substantially from market prices, especially for instruments with complex characteristics, such as derivative instruments.

Momentum Style Risk: Investing in or having exposure to securities with positive *momentum* entails investing in securities that have had above-average recent returns. These securities may be more volatile than a broad cross-section of securities. In addition, there may be periods during which the investment performance of the Fund while using a *momentum* strategy may suffer.

Short Sale Risk: The Fund enters into a short sale by selling a security it has borrowed (typically from a broker or other institution). If the market price of a security increases after the Fund borrows the security, the Fund will suffer a (potentially unlimited) loss when it replaces the borrowed security at the higher price. In certain cases, purchasing a security to cover a short position can itself cause the price of the security to rise further, thereby exacerbating the loss. In addition, the Fund may not always be able to borrow the security at a particular time or at an acceptable price. The Fund may also take a short position in a derivative instrument, such as a future, forward or swap. A short position in a derivative instrument involves the risk of a theoretically unlimited increase in the value of the underlying instrument, which could cause the Fund to suffer a (potentially unlimited) loss. Short sales also involve transaction and financing costs that will reduce potential Fund gains and increase potential Fund losses.

Swap Agreements Risk: Swap agreements involve the risk that the party with whom the Fund has entered into the swap will default on its obligation to pay the Fund. Additionally, certain unexpected market events or significant adverse market movements could result in the Fund not holding enough assets to be able to meet its obligations under the agreement. Such occurrences may negatively impact the Fund's ability to implement its principal investment strategies and could result in losses to the Fund.

Value Style Risk: Investing in or having exposure to "value" securities presents the risk that the securities may never reach what the *Adviser* believes are their full market values, either because the market fails to recognize what the *Adviser* considers to be the security's true value or because the *Adviser* misjudged that value. In addition, there may be periods during which the investment performance of the Fund while using a value strategy may suffer.

Volatility Risk: The Fund may have investments that appreciate or decrease significantly in value over short periods of time. This may cause the Fund's net asset value per share to experience significant increases or declines in value over short periods of time, however, all investments long- or short-term are subject to risk of loss.

Performance Information

The performance information below shows summary performance information for the Fund in a bar chart and an average annual *total returns* table. The information shows you how the Fund's performance has varied year by year and provides some indication of the risks of investing in the Fund.

The Fund's past performance (before and after taxes), as provided by the bar chart and performance table that follows, is not an indication of future results. Updated information on the Fund's performance, including its current NAV per share, can be obtained by visiting <https://funds.aqr.com>.

Class I Shares—Total Returns

The bar chart below provides the Fund's performance for its first full calendar year.

Highest Quarterly Return

11.65% (1Q17)

Lowest Quarterly Return

5.58% (2Q17)

Average Annual Total Returns as of December 31, 2017

The following table compares the Fund's average annual *total returns* for Class I Shares and Class N Shares as of December 31, 2017 to the *MSCI Emerging Markets Index*. You cannot invest directly in an index. The table includes all applicable fees and sales charges.

	One Year	Since Inception (December 14, 2016)
AQR Emerging Relaxed Constraint Equity Fund—Class I		
Return Before Taxes	37.34%	34.90%
Return After Taxes on Distributions	36.76%	34.35%
Return After Taxes on Distributions and Sale of Fund Shares	21.28%	26.46%
AQR Emerging Relaxed Constraint Equity Fund—Class N		
Return Before Taxes	36.94%	34.52%
<i>MSCI Emerging Markets Index</i> (reflects no deductions for fees, expenses or taxes)	37.28%	34.14%

After-tax returns are calculated using the historical highest individual marginal tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns are not relevant to investors who hold their Fund shares through tax-deferred arrangements such as 401(k) plans or individual retirement accounts. After-tax returns are for Class I Shares only. After-tax returns for other classes will vary.

Investment Manager

The Fund's investment manager is AQR Capital Management, LLC.

Portfolio Managers

Important Additional Information

PURCHASE AND SALE OF FUND SHARES

You may purchase or redeem Class I Shares and Class N Shares of each Fund, as applicable, each day the *NYSE* is open. To purchase or redeem shares you should contact your financial intermediary, or, if you hold your shares through the Fund, you should contact the Fund by phone at (866) 290-2688, by mail (c/o AQR Funds, P.O. Box 2248, Denver, CO 80201-2248), or by the Internet at <https://funds.aqr.com>. Each Fund's initial and subsequent investment minimums for Class I Shares and Class N Shares, as applicable, generally are as follows.

	Class I Shares	Class N Shares
Minimum Initial Investment	\$5,000,000*	\$1,000,000*
Minimum Subsequent Investment	None	None

* Reductions apply to certain eligibility groups. See "Investing with the AQR Funds" in the Funds' prospectus.

TAX INFORMATION

Each Fund's dividends and distributions may be subject to federal income taxes and may be taxed as ordinary income or capital gains, unless you are a tax-exempt investor or are investing through a retirement plan, in which case you may be subject to federal income tax upon withdrawal from such tax deferred arrangements.

PAYMENTS TO BROKER/DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase shares of a Fund through a broker-dealer or other financial intermediary, the Fund and the *Adviser* or its affiliates may pay the intermediary for the sale of Fund shares and other services. These payments may create a conflict of interest by influencing the broker-dealer or other financial intermediary and your individual financial professional to recommend the Fund over another investment. Ask your individual financial professional or visit your financial intermediary's website for more information.

Details About the Funds

Glossary. To keep things simple, we have defined and explained a number of terms and concepts in a Glossary at the back of this prospectus. Terms that are in italics have definitions or explanations in the Glossary.

Included in this prospectus are sections that tell you about buying and selling shares, management information, shareholder features of the Funds and your rights as a shareholder.

Details About the AQR Large Cap Multi-Style Fund

INVESTMENT OBJECTIVE

The AQR Large Cap Multi-Style Fund (the “Fund”) seeks long-term capital appreciation.

There can be no assurance that the Fund will be successful in achieving its investment objective.

PRINCIPAL INVESTMENT STRATEGIES

The Fund pursues its investment objective by investing, under normal market conditions, at least 80% of its net assets (including borrowings for investment purposes) in equity or equity-related securities (including, but not limited to, exchange-traded funds, equity index futures, equity index swaps and depositary receipts) of large-cap companies.

The Fund combines multiple investment styles, primarily including value, *momentum* and quality, using an integrated approach. In managing the Fund, the *Adviser* seeks to invest in attractively valued companies with positive *momentum* and a stable business. Companies are considered to be good value investments if they appear cheap based on multiple fundamental measures, including price-to-book and price-to-earnings ratios relative to other securities in its relevant universe at the time of purchase. In assessing positive *momentum*, the *Adviser* favors securities with strong medium-term performance relative to other securities in its relevant universe at the time of purchase. Further, the *Adviser* favors stable companies in good business health, including those with strong profitability and stable earnings. The *Adviser* may add to or modify the economic factors employed in selecting securities. There is no guarantee that the Fund’s objective will be met.

The Fund generally invests in large-cap U.S. companies, which the *Adviser* generally considers to be those companies with market capitalizations within the range of the *Russell 1000*[®] *Index* at the time of purchase. As of December 31, 2017, the market capitalization of the companies comprising the *Russell 1000*[®] *Index* ranged from \$1.1 billion to \$860.9 billion. The Fund may also invest in mid-cap securities.

The *Adviser* determines the weight of each security in the portfolio using a combination of its assessment of the liquidity of the security, the attractiveness of the security based on each factor described above and additional criteria that form part of the *Adviser*’s security selection process. The *Adviser* utilizes portfolio optimization techniques to determine trading activity, taking into account the transaction costs associated with trading each equity instrument.

The Fund invests significantly in common stocks. The Fund may also invest in or use financial futures contracts and other types of equity-linked derivative instruments such as equity swaps and equity index swaps, as well as exchange-traded funds and similar pooled investment vehicles, for hedging purposes, to gain exposure to the equity market and to maintain liquidity to pay for redemptions. A portion of the Fund’s assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

To attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.

Details About the AQR Small Cap Multi-Style Fund

INVESTMENT OBJECTIVE

The AQR Small Cap Multi-Style Fund (the “Fund”) seeks long-term capital appreciation.

There can be no assurance that the Fund will be successful in achieving its investment objective.

PRINCIPAL INVESTMENT STRATEGIES

The Fund pursues its investment objective by investing, under normal market conditions, at least 80% of its net assets (including borrowings for investment purposes) in equity or equity-related securities (including, but not limited to, exchange-traded funds, equity index futures, equity index swaps and depositary receipts) of small-cap companies.

The Fund combines multiple investment styles, primarily including value, *momentum* and quality, using an integrated approach. In managing the Fund, the *Adviser* seeks to invest in attractively valued companies with positive *momentum* and a stable business. Companies are considered to be good value investments if they appear cheap based on multiple fundamental measures, including price-to-book and price-to-earnings ratios relative to other securities in its relevant universe at the time of purchase. In assessing positive *momentum*, the *Adviser* favors securities with strong medium-term performance relative to other securities in its relevant universe at the time of purchase. Further, the *Adviser* favors stable companies in good business health, including those with strong profitability and stable earnings. The *Adviser* may add to or modify the economic factors employed in selecting securities. There is no guarantee that the Fund’s objective will be met.

The Fund generally invests in small-cap U.S. companies, which the *Adviser* generally considers to be those companies with market capitalizations within the range of the *Russell 2000*[®] *Index* at the time of purchase. As of December 31, 2017, the market capitalization of the companies comprising the *Russell 2000*[®] *Index* ranged from \$23 million to \$9.4 billion.

The *Adviser* determines the weight of each security in the portfolio using a combination of its assessment of the liquidity of the security, the attractiveness of the security based on each factor described above and additional criteria that form part of the *Adviser*’s security selection process. The *Adviser* utilizes portfolio optimization techniques to determine trading activity, taking into account the transaction costs associated with trading each equity instrument.

The Fund invests significantly in common stocks. The Fund may also invest in or use financial futures contracts and other types of equity-linked derivative instruments such as equity swaps and equity index swaps, as well as exchange-traded funds and similar pooled investment vehicles, for hedging purposes, to gain exposure to the equity market and to maintain liquidity to pay for redemptions. A portion of the Fund’s assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

To attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.

Details About the AQR International Multi-Style Fund

INVESTMENT OBJECTIVE

The AQR International Multi-Style Fund (the “Fund”) seeks long-term capital appreciation.

There can be no assurance that the Fund will be successful in achieving its investment objective.

PRINCIPAL INVESTMENT STRATEGIES

The Fund pursues its investment objective by investing, under normal market conditions, at least 80% of its net assets (including borrowings for investment purposes) in equity or equity-related securities (including, but not limited to, exchange-traded funds, equity index futures, equity index swaps and depositary receipts) of non-U.S. companies.

The Fund combines multiple investment styles, primarily including value, *momentum* and quality, using an integrated approach. In managing the Fund, the *Adviser* seeks to invest in attractively valued companies with positive *momentum* and a stable business. Companies are considered to be good value investments if they appear cheap based on multiple fundamental measures, including price-to-book and price-to-earnings ratios relative to other securities in its relevant universe at the time of purchase. In assessing positive *momentum*, the *Adviser* favors securities with strong medium-term performance relative to other securities in its relevant universe at the time of purchase. Further, the *Adviser* favors stable companies in good business health, including those with strong profitability and stable earnings. The *Adviser* may add to or modify the economic factors employed in selecting securities. There is no guarantee that the Fund’s objective will be met.

The Fund will generally invest in developed markets outside of the U.S. As of the date of this prospectus, the *Adviser* considers developed markets outside of the U.S. to be those countries that are included in the *MSCI World ex-U.S. Index* at the time of purchase.

The Fund generally invests in large-cap companies, which the *Adviser* generally considers to be those companies with market capitalizations within the range of the *MSCI World ex-U.S. Index* at the time of purchase. Although the Fund does not limit its investments to any one country, the Fund may invest in any one country without limit.

The *Adviser* determines the weight of each security in the portfolio using a combination of its assessment of the liquidity of the security, the attractiveness of the security based on each factor described above and additional criteria that form part of the *Adviser*’s security selection process. The *Adviser* utilizes portfolio optimization techniques to determine trading activity, taking into account the transaction costs associated with trading each equity instrument.

The Fund invests significantly in common stocks. The Fund may also invest in or use financial futures contracts, forward foreign currency contracts and other types of equity-linked derivative instruments such as equity swaps and equity index swaps, as well as exchange-traded funds and similar pooled investment vehicles, for hedging purposes, to gain exposure to the equity market and to maintain liquidity to pay for redemptions. A portion of the Fund’s assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

To attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

OTHER STRATEGIES

- **Mid-Cap Securities**—The Fund may invest in mid-cap securities of non-U.S. companies.

The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.

Details About the AQR Emerging Multi-Style Fund

INVESTMENT OBJECTIVE

The AQR Emerging Multi-Style Fund (the “Fund”) seeks long-term capital appreciation.

There can be no assurance that the Fund will be successful in achieving its investment objective.

PRINCIPAL INVESTMENT STRATEGIES

The Fund pursues its investment objective by investing, under normal market conditions, at least 80% of its net assets (including borrowings for investment purposes) in equity or equity-related instruments (including, but not limited to, exchange-traded funds, equity index futures, equity index swaps and depositary receipts) of emerging market companies.

The Fund combines multiple investment styles, primarily including value, *momentum* and quality, using an integrated approach. In managing the Fund, the *Adviser* seeks to invest in attractively valued companies with positive *momentum* and a stable business. Companies are considered to be good value investments if they appear cheap based on multiple fundamental measures, including price-to-book and price-to-earnings ratios relative to other securities in its relevant universe at the time of purchase. In assessing positive *momentum*, the *Adviser* favors securities with strong medium-term performance relative to other securities in its relevant universe at the time of purchase. Further, the *Adviser* favors stable companies in good business health, including those with strong profitability and stable earnings. The *Adviser* may add to or modify the economic factors employed in selecting securities. There is no guarantee that the Fund’s objective will be met.

A company will be considered to be an emerging market company if it is organized, domiciled, or has a principal place of business in an emerging market. Emerging markets include countries that are included in the *MSCI Emerging Markets Index* at the time of purchase. Equity-related instruments include instruments that provide exposure to the change in value of an emerging market company. The Fund may also invest in, and have exposure to, non-emerging market companies if the *Adviser* considers it advisable to achieve the Fund’s investment objective.

The Fund generally invests in large- and mid-cap companies, which the *Adviser* generally considers to be those companies with market capitalizations within the range of the *MSCI Emerging Markets Index* at the time of purchase. Although the Fund does not limit its investments to any one country, the Fund may invest in any one country without limit.

The *Adviser* determines the weight of each security in the portfolio using a combination of its assessment of the liquidity of the security, the attractiveness of the security based on each factor described above and additional criteria that form part of the *Adviser*’s security selection process. The *Adviser* utilizes portfolio optimization techniques to determine trading activity, taking into account the transaction costs associated with trading each equity instrument.

The Fund invests significantly in common stocks. The Fund may also invest in or use financial futures contracts, forward foreign currency contracts and other types of equity-linked derivative instruments such as equity swaps and equity index swaps, as well as exchange-traded-funds and similar pooled investment vehicles, for hedging purposes, to gain exposure to the equity market and to maintain liquidity to pay for redemptions. A portion of the Fund’s assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

To attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.

Details About the AQR TM Large Cap Multi-Style Fund

INVESTMENT OBJECTIVE

The AQR TM Large Cap Multi-Style Fund (the “Fund”) seeks long-term after-tax capital appreciation.

There can be no assurance that the Fund will be successful in achieving its investment objective.

PRINCIPAL INVESTMENT STRATEGIES

The Fund pursues its investment objective by investing, under normal market conditions, at least 80% of its net assets (including borrowings for investment purposes) in equity or equity-related securities (including, but not limited to, exchange-traded funds, equity index futures, equity index swaps and depositary receipts) of large-cap companies. The “TM” in the Fund’s name reflects that the Fund employs a “tax management” strategy which considers the potential impact of federal income tax on shareholders’ investment return.

The Fund combines multiple investment styles, primarily including value, *momentum* and quality, using an integrated approach. In managing the Fund, the *Adviser* seeks to invest in attractively valued companies with positive *momentum* and a stable business. Companies are considered to be good value investments if they appear cheap based on multiple fundamental measures, including price-to-book and price-to-earnings ratios relative to other securities in its relevant universe at the time of purchase. In assessing positive *momentum*, the *Adviser* favors securities with strong medium-term performance relative to other securities in its relevant universe at the time of purchase. Further, the *Adviser* favors stable companies in good business health, including those with strong profitability and stable earnings. The *Adviser* may add to or modify the economic factors employed in selecting securities. There is no guarantee that the Fund’s objective will be met.

The Fund generally invests in large-cap U.S. companies, which the *Adviser* generally considers to be those companies with market capitalizations within the range of the *Russell 1000*[®] Index at the time of purchase. As of December 31, 2017, the market capitalization of the companies comprising the *Russell 1000*[®] Index ranged from \$1.1 billion to \$860.9 billion. The Fund may also invest in mid-cap securities.

The *Adviser* determines the weight of each security in the portfolio using a combination of its assessment of the liquidity of the security, the attractiveness of the security based on each factor described above and additional criteria that form part of the *Adviser*’s security selection process. The *Adviser* utilizes portfolio optimization techniques to determine trading activity, taking into account the transaction costs and adverse tax consequences associated with trading each equity instrument.

When selecting securities for the portfolio, the *Adviser* also employs a tax management strategy which considers the potential impact of federal income tax on shareholders’ investment return. This tax management strategy is generally designed so investors receive lower distributions of realized capital gains than funds that do not take tax consequences into account. Investors should not expect that there will be no capital gain distributions, however, as the Fund will balance investment considerations with tax consequences in making investment decisions. The techniques and strategies that may be used to attempt to reduce the impact of federal income tax on shareholders’ investment returns include:

- when believed by the *Adviser* to be appropriate, selling stocks to realize losses, with the specific purpose of offsetting gains;
- deferring realizations of net capital gains;
- limiting portfolio turnover that may result in taxable gains; and
- choosing a tax accounting method that reduces tax liability: for example, using the highest-in, first-out (HIFO) method which sells tax lots of securities that have a higher tax basis before selling tax lots of securities that have a lower tax basis.

The Fund invests significantly in common stocks. The Fund may also invest in or use financial futures contracts and other types of equity-linked derivative instruments such as equity swaps and equity index swaps, as well as exchange-traded funds and similar pooled investment vehicles, for hedging purposes, to gain exposure to the equity market and to maintain liquidity to pay for redemptions. A portion of the Fund’s assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

To attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.

The *Adviser* determines the weight of each security in the portfolio using a combination of its assessment of the liquidity of the security, the attractiveness of the security based on each factor described above and additional criteria that form part of the *Adviser’s* security selection process. The *Adviser* utilizes portfolio optimization techniques to determine trading activity, taking into account the transaction costs and adverse tax consequences associated with trading each equity instrument.

When selecting securities for the portfolio, the *Adviser* also employs a tax management strategy which considers the potential impact of federal income tax on shareholders’ investment return. This tax management strategy is generally designed so investors receive lower distributions of realized capital gains than funds that do not take tax consequences into account. Investors should not expect that there will be no capital gain distributions, however, as the Fund will balance investment considerations with tax consequences in making investment decisions. The techniques and strategies that may be used to attempt to reduce the impact of federal income tax on shareholders’ investment returns include:

- when believed by the *Adviser* to be appropriate, selling stocks to realize losses, with the specific purpose of offsetting gains;
- deferring realizations of net capital gains;
- limiting portfolio turnover that may result in taxable gains; and
- choosing a tax accounting method that reduces tax liability: for example, using the highest-in, first-out (HIFO) method which sells tax lots of securities that have a higher tax basis before selling tax lots of securities that have a lower tax basis.

The Fund invests significantly in common stocks. The Fund may also invest in or use financial futures contracts, forward foreign currency contracts and other types of equity-linked derivative instruments such as equity swaps and equity index swaps, as well as exchange-traded-funds and similar pooled investment vehicles, for hedging purposes, to gain exposure to the equity market and to maintain liquidity to pay for redemptions. A portion of the Fund’s assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

To attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.

Details About the AQR Large Cap Momentum Style Fund

INVESTMENT OBJECTIVE

The AQR Large Cap Momentum Style Fund (the “Fund”) seeks long-term capital appreciation.

There can be no assurance that the Fund will be successful in achieving its investment objective.

PRINCIPAL INVESTMENT STRATEGIES

The Fund pursues a *momentum* investment style by investing primarily in equity or equity-related securities (including, but not limited to, exchange-traded funds, equity index futures, and depositary receipts) of large-cap companies traded on a principal U.S. exchange or over-the-counter market that the *Adviser* determines to have positive *momentum*. The *Adviser* considers a security to have positive *momentum* primarily if it has outperformed other securities on a relative basis over a recent time period. Relative performance may be based on price *momentum*, earnings *momentum*, or other types of *momentum*, and will generally be measured over time periods ranging from one to twelve months. The criteria the *Adviser* uses for determining positive *momentum* may change from time to time.

Under normal market circumstances, the Fund will invest at least 80% of its net assets (including any borrowings for investment purposes) in large-cap U.S. companies. As of the date of this prospectus, the *Adviser* generally considers large-cap U.S. companies to be those companies with market capitalizations within the range of the *Russell 1000*[®] *Index* at the time of purchase. As of December 31, 2017, the market capitalization of the companies comprising the *Russell 1000*[®] *Index* ranged from \$1.1 billion to \$860.9 billion. The Fund may also invest in mid-cap companies.

The *Adviser* determines the weight of each security in the portfolio using a combination of the market capitalization of the security and the *Adviser's* determination of the attractiveness of the security based on the *Adviser's* assessment of the security's *momentum* and additional criteria that form part of the *Adviser's* security selection process. The *Adviser* expects to rebalance the portfolio monthly, at which time the *Adviser* will consider which securities are eligible for inclusion in the portfolio by virtue of their capitalization and positive *momentum*.

The *Adviser* believes that effective management of transaction costs is essential. Transaction costs include commissions, bid-ask spreads, market impact and time delays (the time between the investment decision and implementation, during which a market may move in favor of or against the Fund). The *Adviser* employs an optimization process and a number of sophisticated trading techniques in an effort to keep trading costs for the Fund reasonably low.

In order to manage transaction costs, the *Adviser* does not intend to rebalance the Fund's portfolio mechanically or to purchase and sell exclusively those securities defined by the eligibility criteria described above. The *Adviser* will seek to maintain flexibility to trade opportunistically in order to strike a balance between maintaining the desired exposure to positive *momentum* while attempting to keep transaction costs reasonably low.

The Fund invests significantly in common stocks. The Fund may also invest in or use financial futures contracts and other types of equity-linked derivative instruments such as equity swaps and equity index swaps, as well as exchange-traded funds and similar pooled investment vehicles to gain exposure to the equity market and to maintain liquidity to pay for redemptions. A portion of the Fund's assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

To attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.

Details About the AQR Small Cap Momentum Style Fund

INVESTMENT OBJECTIVE

The AQR Small Cap Momentum Style Fund (the “Fund”) seeks long-term capital appreciation.

There can be no assurance that the Fund will be successful in achieving its investment objective.

PRINCIPAL INVESTMENT STRATEGIES

The Fund pursues a *momentum* investment style by investing primarily in equity or equity-related securities (including, but not limited to, exchange-traded funds, equity index futures, and depositary receipts) of small-cap companies traded on a principal U.S. exchange or over-the-counter market that the *Adviser* determines to have positive *momentum*. The *Adviser* considers a security to have positive *momentum* primarily if it has outperformed other securities on a relative basis over a recent time period. Relative performance may be based on price *momentum*, earnings *momentum*, or other types of *momentum*, and will generally be measured over time periods ranging from one to twelve months. The criteria the *Adviser* uses for determining positive *momentum* may change from time to time.

Under normal market circumstances, the Fund will invest at least 80% of its net assets (including any borrowings for investment purposes) in small-cap U.S. companies. As of the date of this prospectus, the *Adviser* considers small-cap U.S. companies to be those companies with market capitalizations within the range of the *Russell 2000*[®] *Index* at the time of purchase. As of December 31, 2017, the market capitalization of the companies comprising the *Russell 2000*[®] *Index* ranged from \$23 million to \$9.4 billion.

The *Adviser* determines the weight of each security in the portfolio using a combination of the market capitalization of the security and the *Adviser's* determination of the attractiveness of the security based on the *Adviser's* assessment of the security's *momentum* and additional criteria that form part of the *Adviser's* security selection process. The *Adviser* expects to rebalance the portfolio monthly, at which time the *Adviser* will consider which securities are eligible for inclusion in the portfolio by virtue of their capitalization and positive *momentum*.

The *Adviser* believes that effective management of transaction costs is essential. Transaction costs include commissions, bid-ask spreads, market impact and time delays (the time between the investment decision and implementation, during which a market may move in favor of or against the Fund). The *Adviser* employs an optimization process and a number of sophisticated trading techniques in an effort to keep trading costs for the Fund reasonably low.

In order to manage transaction costs, the *Adviser* does not intend to rebalance the Fund's portfolio mechanically or to purchase and sell exclusively those securities defined by the eligibility criteria described above. The *Adviser* will seek to maintain flexibility to trade opportunistically in order to strike a balance between maintaining the desired exposure to positive *momentum* while attempting to keep transaction costs reasonably low.

A portion of the Fund's assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

To attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.

Details About the AQR Emerging Momentum Style Fund

INVESTMENT OBJECTIVE

The AQR Emerging Momentum Style Fund (the “Fund”) seeks long-term capital appreciation.

There can be no assurance that the Fund will be successful in achieving its investment objective.

PRINCIPAL INVESTMENT STRATEGIES

The Fund pursues a *momentum* investment style by investing primarily in equity or equity-related instruments (including, but not limited to, exchange-traded funds, equity index futures, equity index swaps and depositary receipts) of large- and mid-cap emerging market companies that the *Adviser* determines to have positive *momentum*. The *Adviser* considers a security to have positive *momentum* primarily if it has outperformed other securities on a relative basis over a recent time period. Relative performance may be based on price *momentum*, earnings *momentum*, or other types of *momentum*, and will generally be measured over time periods ranging from one to twelve months. The criteria the *Adviser* uses for determining positive *momentum* may change from time to time. Under normal market conditions, the Fund will invest at least 80% of its net assets (including borrowings for investment purposes) in emerging market companies.

A company will be considered to be an emerging market company if it is organized, domiciled, or has a principal place of business in an emerging market. Emerging markets include countries that are included in the *MSCI Emerging Markets Index* at the time of purchase. Equity-related instruments include instruments that provide exposure to the change in value of an emerging market company. The Fund may also invest in, and have exposure to, non-emerging market companies if the *Adviser* considers it advisable to achieve the Fund’s investment objective.

The *Adviser* considers the Fund’s universe to be those large- and mid-cap companies with market capitalizations within the range of the *MSCI Emerging Markets Index* at the time of purchase. Although the Fund does not limit its investments to any one country, the Fund may invest in any one country without limit.

The *Adviser* determines the weight of each security in the portfolio using a combination of the market capitalization of the security and the *Adviser’s* determination of the attractiveness of the security based on the *Adviser’s* assessment of the security’s *momentum* and additional criteria that form part of the *Adviser’s* security selection process. The *Adviser* expects to rebalance the portfolio monthly, at which time the *Adviser* will consider which securities are eligible for inclusion in the portfolio by virtue of their capitalization and positive *momentum*.

The *Adviser* believes that effective management of transaction costs is essential. Transaction costs include commissions, bid-ask spreads, market impact and time delays (the time between the investment decision and implementation, during which a market may move in favor of or against the Fund). The *Adviser* employs an optimization process and a number of sophisticated trading techniques in an effort to keep trading costs for the Fund reasonably low.

In order to manage transaction costs, the *Adviser* does not intend to rebalance the Fund’s portfolio mechanically or to purchase and sell exclusively those securities defined by the eligibility criteria described above. The *Adviser* will seek to maintain flexibility to trade opportunistically in order to strike a balance between maintaining the desired exposure to positive *momentum* while attempting to keep transaction costs reasonably low.

The Fund invests significantly in common stocks. The Fund may also invest in or use financial futures contracts, forward foreign currency contracts and other types of equity-linked derivative instruments such as equity swaps and equity index swaps, as well as exchange-traded-funds and similar pooled investment vehicles to gain exposure to the equity market and to maintain liquidity to pay for redemptions. A portion of the Fund’s assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

To attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.

Details About the AQR TM Large Cap Momentum Style Fund

INVESTMENT OBJECTIVE

The AQR TM Large Cap Momentum Style Fund (the “Fund”) seeks long-term after-tax capital appreciation.

There can be no assurance that the Fund will be successful in achieving its investment objective.

PRINCIPAL INVESTMENT STRATEGIES

The Fund pursues a *momentum* investment style by investing primarily in equity or equity-related securities (including, but not limited to, exchange-traded funds, equity index futures, and depositary receipts) of large-cap companies traded on a principal U.S. exchange or over-the-counter market that the *Adviser* determines to have positive *momentum*. The *Adviser* considers a security to have positive *momentum* primarily if it has outperformed other securities on a relative basis over a recent time period. Relative performance may be based on price *momentum*, earnings *momentum*, or other types of *momentum*, and will generally be measured over time periods ranging from one to twelve months. The criteria the *Adviser* uses for determining positive *momentum* may change from time to time. The “TM” in the Fund’s name reflects that the Fund employs a “tax management” strategy which considers the potential impact of federal income tax on shareholders’ investment return.

Under normal market circumstances, the Fund will invest at least 80% of its net assets (including any borrowings for investment purposes) in large-cap U.S. companies. As of the date of this prospectus, the *Adviser* generally considers large-cap U.S. companies to be those companies with market capitalizations within the range of the *Russell 1000*[®] *Index* at the time of purchase. As of December 31, 2017, the market capitalization of the companies comprising the *Russell 1000*[®] *Index* ranged from \$1.1 billion to \$860.9 billion. The Fund may also invest in mid-cap companies.

The *Adviser* determines the weight of each security in the portfolio using a combination of the market capitalization of the security and the *Adviser*’s determination of the attractiveness of the security based on the *Adviser*’s assessment of the security’s *momentum* and additional criteria that form part of the *Adviser*’s security selection process. The *Adviser* expects to rebalance the portfolio monthly, at which time the *Adviser* will consider which securities are eligible for inclusion in the portfolio by virtue of their capitalization and positive *momentum*.

When selecting securities for the portfolio, the *Adviser* also employs a tax management strategy which considers the potential impact of federal income tax on shareholders’ investment return. This tax management strategy is generally designed so investors receive lower distributions of realized capital gains than funds that do not take tax consequences into account. Investors should not expect that there will be no capital gain distributions, however, as the Fund will balance investment considerations with tax consequences in making investment decisions. The techniques and strategies that may be used to attempt to reduce the impact of federal income tax on shareholders’ investment returns include:

- when believed by the *Adviser* to be appropriate, selling stocks to realize losses, with the specific purpose of offsetting gains;
- deferring realizations of net capital gains;
- limiting portfolio turnover that may result in taxable gains; and
- choosing a tax accounting method that reduces tax liability: for example, using the highest-in, first-out (HIFO) method which sells tax lots of securities that have a higher tax basis before selling tax lots of securities that have a lower tax basis.

The *Adviser* believes that effective management of transaction costs is essential. Transaction costs include commissions, bid-ask spreads, market impact and time delays (the time between the investment decision and implementation, during which a market may move in favor of or against the Fund). The *Adviser* employs an optimization process and a number of sophisticated trading techniques in an effort to keep trading costs for the Fund reasonably low.

In order to manage transaction costs and minimize adverse tax consequences, the *Adviser* does not intend to rebalance the Fund’s portfolio mechanically or to purchase and sell exclusively those securities defined by the eligibility criteria described above. The *Adviser* will seek to maintain flexibility to trade opportunistically in order to strike a balance between maintaining the desired exposure to positive *momentum* while attempting to keep transaction costs reasonably low and to minimize federal income taxes on returns.

The Fund invests significantly in common stocks. The Fund may also invest in or use financial futures contracts and other types of equity-linked derivative instruments such as equity swaps and equity index swaps, as well as exchange-traded funds and similar pooled investment vehicles to gain exposure to the equity market and to maintain liquidity to pay for redemptions. A portion of the Fund’s assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

To attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.

To attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.

Details About the AQR TM International Momentum Style Fund

INVESTMENT OBJECTIVE

The AQR TM International Momentum Style Fund (the “Fund”) seeks long-term after-tax capital appreciation. There can be no assurance that the Fund will be successful in achieving its investment objective.

PRINCIPAL INVESTMENT STRATEGIES

The Fund pursues a *momentum* investment style by investing primarily in equity or equity-related securities (including, but not limited to, exchange-traded funds, equity index futures, equity index swaps and depositary receipts) of non-U.S. companies that the *Adviser* determines to have positive *momentum*. The *Adviser* considers a security to have positive *momentum* primarily if it has outperformed other securities on a relative basis over a recent time period. Relative performance may be based on price *momentum*, earnings *momentum*, or other types of *momentum*, and will generally be measured over time periods ranging from one to twelve months. The criteria the *Adviser* uses for determining positive *momentum* may change from time to time. The “TM” in the Fund’s name reflects that the Fund employs a “tax management” strategy which considers the potential impact of federal income tax on shareholders’ investment return.

The Fund will generally invest in developed markets outside the U.S. As of the date of this prospectus, the *Adviser* considers developed markets outside of the U.S. to be those countries that are included in the *MSCI World ex-U.S. Index* at the time of purchase. Although the Fund does not limit its investments to any one country, the Fund may invest in any one country without limit.

The *Adviser* determines the weight of each security in the portfolio using a combination of the market capitalization of the security and the *Adviser’s* determination of the attractiveness of the security based on the *Adviser’s* assessment of the security’s *momentum* and additional criteria that form part of the *Adviser’s* security selection process. The *Adviser* expects to rebalance the portfolio monthly, at which time the *Adviser* will consider which securities are eligible for inclusion in the portfolio by virtue of their capitalization and positive *momentum*.

When selecting securities for the portfolio, the *Adviser* also employs a tax management strategy which considers the potential impact of federal income tax on shareholders’ investment return. This tax management strategy is generally designed so investors receive lower distributions of realized capital gains than funds that do not take tax consequences into account. Investors should not expect that there will be no capital gain distributions, however, as the Fund will balance investment considerations with tax consequences in making investment decisions. The techniques and strategies that may be used to attempt to reduce the impact of federal income tax on shareholders’ investment returns include:

- when believed by the *Adviser* to be appropriate, selling stocks to realize losses, with the specific purpose of offsetting gains;
- deferring realizations of net capital gains;
- limiting portfolio turnover that may result in taxable gains; and
- choosing a tax accounting method that reduces tax liability: for example, using the highest-in, first-out (HIFO) method which sells tax lots of securities that have a higher tax basis before selling tax lots of securities that have a lower tax basis.

The *Adviser* believes that effective management of transaction costs is essential. Transaction costs include commissions, bid-ask spreads, market impact and time delays (the time between the investment decision and implementation, during which a market may move in favor of or against the Fund). The *Adviser* employs an optimization process and a number of sophisticated trading techniques in an effort to keep trading costs for the Fund reasonably low.

In order to manage transaction costs and minimize adverse tax consequences, the *Adviser* does not intend to rebalance the Fund’s portfolio mechanically or to purchase and sell exclusively those securities defined by the eligibility criteria described above. The *Adviser* will seek to maintain flexibility to trade opportunistically in order to strike a balance between maintaining the desired exposure to positive *momentum* while attempting to keep transaction costs reasonably low and to minimize federal income taxes on returns.

The Fund invests significantly in common stocks. The Fund may also invest in or use financial futures contracts, forward foreign currency contracts and other types of equity-linked derivative instruments such as equity swaps and equity index swaps, as well as exchange-traded funds and similar pooled investment vehicles to gain exposure to the equity market and to maintain liquidity to pay for redemptions. A portion of the Fund’s assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

To attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.

Details About the AQR Large Cap Defensive Style Fund

INVESTMENT OBJECTIVE

The AQR Large Cap Defensive Style Fund (the “Fund”) seeks total return.

Total return consists of capital appreciation and income.

There can be no assurance that the Fund will be successful in achieving its investment objective.

PRINCIPAL INVESTMENT STRATEGIES

The Fund pursues a “defensive” investment style, seeking to provide downside protection with upside potential through active stock selection, risk management and diversification.

The Fund pursues its objective by investing, under normal market conditions, at least 80% of its net assets (including any borrowings for investment purposes) in Equity Instruments of large-cap issuers. Equity Instruments include common stock, preferred stock, warrants, exchange-traded funds that invest in equity securities, stock index futures, depositary receipts and other derivative instruments where the reference asset is an equity security. As of the date of this prospectus, the *Adviser* generally considers large-cap issuers to be those issuers with market capitalizations within the range of the *Russell 1000*[®] *Index* at the time of purchase. As of December 31, 2017, the market capitalization of the companies comprising the *Russell 1000*[®] *Index* ranged from \$1.1 billion to \$860.9 billion.

The Fund can invest in companies of any size and may invest in small- and mid-cap companies from time to time in the discretion of the *Adviser*. Pending investment in Equity Instruments of large-cap issuers or for use as collateral to meet margin requirements, the Fund may invest in short-term instruments, including U.S. Government securities, bank certificates of deposit, money market instruments or funds, and such other liquid investments deemed appropriate by the *Adviser*. The Fund may invest in these securities without limit for temporary defensive purposes. There is no guarantee that the Fund’s objective will be met.

The Fund pursues a defensive investment style, meaning it seeks to participate in rising equity markets while mitigating downside risk in declining markets. In other words, the Fund expects to lag the performance of traditional U.S. equity funds when equity markets are rising, but to exceed the performance of traditional U.S. equity funds during equity market declines. To achieve this result, the Fund will be broadly diversified across companies and industries and will invest in companies that the *Adviser* has identified to have low measures of risk and high quality (e.g., stable companies in good business health). The *Adviser* believes that the stocks of these types of companies tend to be lower “beta” stocks and that lower “beta” stocks generally are less volatile than higher “beta” stocks (that is, their value has a lower sensitivity to fluctuations in the securities markets). The *Adviser* expects low “beta” and high quality stocks to produce higher risk-adjusted returns over a full market cycle than high “beta” or poor quality stocks.

The Fund is actively managed and the *Adviser* will vary the Fund’s exposures to issuers and industries based on the *Adviser*’s evaluation of investment opportunities. In constructing the portfolio, the *Adviser* uses quantitative models, which combine active management to identify quality companies and statistical measures of risk to assure diversification by issuer and industry, as well as additional criteria that form part of the *Adviser*’s security selection process. The *Adviser* will use *volatility* and correlation forecasting and portfolio construction methodologies to manage the Fund. The *Adviser* utilizes quantitative risk models in furtherance of the Fund’s investment objective, which seek to control portfolio level risk. Shifts in allocations among issuers and industries will be determined using the quantitative models based on the *Adviser*’s determinations of risk and quality, as well as other factors including, but not limited to, managing industry and sector exposures. The Fund bears the risk that the quantitative models used by the portfolio managers will not be successful in forecasting market returns or in determining the weighting of investment positions that will enable the Fund to achieve its investment objective. In managing the Fund’s portfolio, the *Adviser* may from time to time utilize certain tax management techniques which consider the potential impact of federal income tax on shareholders’ investment return.

The Fund makes use of derivative instruments, which may be used for hedging purposes and to enhance returns. The Fund may use derivatives as a substitute for investing in conventional securities and for investment purposes to increase its economic exposure to a particular security, currency or index in a cost effective manner. The Fund’s use of derivatives such as futures contracts and certain other Equity Instruments (that are derivative instruments) will have the economic effect of financial leverage. Financial leverage magnifies exposure to the swings in prices of an asset underlying an Equity Instrument and results in increased *volatility*, which means the Fund will have the potential for greater gains, as well as the potential for greater losses, than if the Fund does not use Equity Instruments that have a leveraging effect. Leveraging tends to magnify, sometimes significantly, the effect of any increase or decrease in the Fund’s exposure to an asset and may cause the Fund’s NAV to be volatile. For example, if the *Adviser* seeks to gain enhanced exposure to a specific asset through an Equity Instrument providing leveraged exposure to the asset and that Equity Instrument increases in value, the gain to the Fund will be magnified; however, if that investment decreases in value, the loss to the Fund will be magnified. A decline in the Fund’s assets due to losses magnified by the Equity Instruments providing leveraged exposure may require the Fund to liquidate portfolio positions to satisfy its obligations, to meet redemption requests or to meet asset segregation requirements when it may not be advantageous to do so.

There is no assurance that the Fund's use of Equity Instruments providing enhanced exposure will enable the Fund to achieve its investment objective. In addition, to attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

The *Adviser* utilizes portfolio optimization techniques to determine trading activity, taking into account the transaction costs associated with trading each Equity Instrument. The Fund employs sophisticated proprietary trading techniques in an effort to mitigate trading costs and execution impact on the Fund.

The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.

Details About the AQR International Defensive Style Fund

INVESTMENT OBJECTIVE

The AQR International Defensive Style Fund (the “Fund”) seeks total return.

Total return consists of capital appreciation and income.

There can be no assurance that the Fund will be successful in achieving its investment objective.

PRINCIPAL INVESTMENT STRATEGIES

The Fund pursues a “defensive” investment style, seeking to provide downside protection with upside potential through active stock selection, risk management and diversification.

The Fund pursues its objective by investing, under normal market conditions, at least 80% of its net assets (including any borrowings for investment purposes) in Equity Instruments of International Issuers. Equity Instruments include common stock, preferred stock, warrants, exchange-traded funds that invest in equity securities, stock index futures, depositary receipts and other derivative instruments where the reference asset is an equity security. An issuer will be considered an International Issuer if it is organized, domiciled, or has a principal place of business in a country that is part of the *MSCI World ex-USA Index*, or if an instrument provides exposure to the change in value of a company that meets that definition. However, the Fund may also invest in issuers organized, domiciled, or with a principal place of business in other countries if the *Adviser* considers it advisable to achieve the Fund’s investment objective. The Fund can invest in companies of any size and may invest to a significant extent in small- and mid-cap companies from time to time in the discretion of the *Adviser*. Pending investment in Equity Instruments of International Issuers or for use as collateral to meet margin requirements, the Fund may invest in short-term instruments, including U.S. Government securities, bank certificates of deposit, money market instruments or funds, and such other liquid investments deemed appropriate by the *Adviser*. The Fund may invest in these securities without limit for temporary defensive purposes. There is no guarantee that the Fund’s objective will be met.

The Fund also engages in currency transactions with counterparties primarily in order to hedge against a decline in the value of portfolio holdings denominated in particular currencies and to provide temporary exposure to a particular currency in lieu of leaving cash inflows uninvested. Currency transactions include forward currency contracts and exchange listed currency futures. A forward currency contract involves a privately negotiated obligation to purchase or sell (with delivery generally required) a specific currency at a future date, which may be any fixed number of days from the date of the contract agreed upon by the parties, at a price set at the time of the contract. The Fund seeks to diversify currency exposures and to avoid the risk of high exposures to any one currency, including U.S. dollars.

The Fund pursues a defensive investment style, meaning it seeks to participate in rising equity markets while mitigating downside risk in declining markets. In other words, the Fund expects to lag the performance of traditional international equity funds when these markets are rising, but to exceed the performance of traditional international equity funds during international equity market declines. To achieve this result, the Fund will be broadly diversified across companies, industries and countries and will invest in companies that the *Adviser* has identified to have low measures of risk and high quality (e.g., stable companies in good business health). The *Adviser* believes that the stocks of these types of companies tend to be lower “beta” stocks and that lower “beta” stocks generally are less volatile than higher “beta” stocks (that is, their value has a lower sensitivity to fluctuations in the securities markets). The *Adviser* expects low “beta” and high quality stocks to produce higher risk-adjusted returns over a full market cycle than high “beta” or poor quality stocks.

The Fund is actively managed and the *Adviser* will vary the Fund’s exposures to issuers, industries, countries and currencies based on the *Adviser*’s evaluation of investment opportunities within and across markets. In constructing the portfolio, the *Adviser* uses quantitative models, which combine active management to identify quality companies and statistical measures of risk to assure diversification by issuer, country, currency and industry, as well as additional criteria that form part of the *Adviser*’s security selection process. The *Adviser* will use *volatility* and correlation forecasting and portfolio construction methodologies to manage the Fund. The *Adviser* utilizes quantitative risk models in furtherance of the Fund’s investment objective, which seek to control portfolio level risk. Shifts in allocations among issuers, industries, countries or currencies will be determined using the quantitative models based on the *Adviser*’s determinations of risk and quality, as well as other factors including, but not limited to, managing industry and sector exposures. The Fund bears the risk that the quantitative models used by the portfolio managers will not be successful in forecasting market returns or in determining the weighting of investment positions that will enable the Fund to achieve its investment objective. In managing the Fund’s portfolio, the *Adviser* may from time to time utilize certain tax management techniques which consider the potential impact of federal income tax on shareholders’ investment return.

The Fund makes use of derivative instruments, which may be used for hedging purposes and to enhance returns. The Fund may use derivatives as a substitute for investing in conventional securities and for investment purposes to increase its economic exposure to a particular security, currency or index in a cost effective manner. The Fund’s use of derivatives such as futures contracts, forward contracts and certain other Equity Instruments (that are derivative instruments) will have the economic effect of financial leverage. Financial leverage magnifies exposure to the swings in prices of an asset underlying an Equity Instrument and results in increased *volatility*, which means the Fund will have

the potential for greater gains, as well as the potential for greater losses, than if the Fund does not use Equity Instruments that have a leveraging effect. Leveraging tends to magnify, sometimes significantly, the effect of any increase or decrease in the Fund's exposure to an asset and may cause the Fund's NAV to be volatile. For example, if the Adviser seeks to gain enhanced exposure to a specific asset through an Equity Instrument providing leveraged exposure to the asset and that Equity Instrument increases in value, the gain to the Fund will be magnified; however, if that investment decreases in value, the loss to the Fund will be magnified. A decline in the Fund's assets due to losses magnified by the Equity Instruments providing leveraged exposure may require the Fund to liquidate portfolio positions to satisfy its obligations, to meet redemption requests or to meet asset segregation requirements when it may not be advantageous to do so. There is no assurance that the Fund's use of Equity Instruments providing enhanced exposure will enable the Fund to achieve its investment objective. In addition, to attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

The Adviser utilizes portfolio optimization techniques to determine trading activity, taking into account the transaction costs associated with trading each Equity Instrument. The Fund employs sophisticated proprietary trading techniques in an effort to mitigate trading costs and execution impact on the Fund.

The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.

Details About the AQR Emerging Defensive Style Fund

INVESTMENT OBJECTIVE

The AQR Emerging Defensive Style Fund (the “Fund”) seeks total return.

Total return consists of capital appreciation and income.

There can be no assurance that the Fund will be successful in achieving its investment objective.

PRINCIPAL INVESTMENT STRATEGIES

The Fund pursues a “defensive” investment style, seeking to provide downside protection with upside potential through active stock selection, risk management and diversification.

The Fund pursues its objective by investing, under normal market conditions, at least 80% of its net assets (including any borrowings for investment purposes) in Equity Instruments of Emerging Markets Issuers. Equity Instruments include common stock, preferred stock, warrants, exchange-traded funds that invest in equity securities, stock index futures, depositary receipts and other derivative instruments where the reference asset is an equity security. An issuer will be considered an Emerging Markets Issuer if it is organized, domiciled, or has a principal place of business in a country that is part of the *MSCI Emerging Markets Index*, or if an instrument provides exposure to the change in value of a company that meets that definition. However, the Fund may also invest in issuers organized, domiciled, or with a principal place of business in other countries if the *Adviser* considers it advisable to achieve the Fund’s investment objective. The Fund can invest in companies of any size and may invest to a significant extent in small- and mid-cap companies from time to time in the discretion of the *Adviser*. Pending investment in Equity Instruments of Emerging Markets Issuers or for use as collateral to meet margin requirements, the Fund may invest in short-term instruments, including U.S. Government securities, bank certificates of deposit, money market instruments or funds, and such other liquid investments deemed appropriate by the *Adviser*. The Fund may invest in these securities without limit for temporary defensive purposes. There is no guarantee that the Fund’s objective will be met.

The Fund also engages in currency transactions with counterparties primarily in order to hedge against a decline in the value of portfolio holdings denominated in particular currencies and to provide temporary exposure to a particular currency in lieu of leaving cash inflows uninvested. Currency transactions include forward currency contracts and exchange listed currency futures. A forward currency contract involves a privately negotiated obligation to purchase or sell (with delivery generally required) a specific currency at a future date, which may be any fixed number of days from the date of the contract agreed upon by the parties, at a price set at the time of the contract. The Fund seeks to diversify currency exposures and to avoid the risk of high exposures to any one currency, including U.S. dollars.

The Fund pursues a defensive investment style, meaning it seeks to participate in rising equity markets while mitigating downside risk in declining markets. In other words, the Fund expects to lag the performance of traditional emerging markets equity funds when these markets are rising, but to exceed the performance of traditional emerging markets equity funds during emerging equity market declines. To achieve this result, the Fund will be broadly diversified across companies, industries and countries and will invest in companies that the *Adviser* has identified to have low measures of risk and high quality (e.g., stable companies in good business health). The *Adviser* believes that the stocks of these types of companies tend to be lower “beta” stocks and that lower “beta” stocks generally are less volatile than higher “beta” stocks (that is, their value has a lower sensitivity to fluctuations in the securities markets). The *Adviser* expects low “beta” and high quality stocks to produce higher risk-adjusted returns over a full market cycle than high “beta” or poor quality stocks.

The Fund is actively managed and the *Adviser* will vary the Fund’s exposures to issuers, industries, countries and currencies based on the *Adviser*’s evaluation of investment opportunities within and across markets. In constructing the portfolio, the *Adviser* uses quantitative models, which combine active management to identify quality companies and statistical measures of risk to assure diversification by issuer, country, currency and industry, as well as additional criteria that form part of the *Adviser*’s security selection process. The *Adviser* will use *volatility* and correlation forecasting and portfolio construction methodologies to manage the Fund. The *Adviser* utilizes quantitative risk models in furtherance of the Fund’s investment objective, which seek to control portfolio level risk. Shifts in allocations among issuers, industries, countries or currencies will be determined using the quantitative models based on the *Adviser*’s determinations of risk and quality, as well as other factors including, but not limited to, managing industry and sector exposures. The Fund bears the risk that the quantitative models used by the portfolio managers will not be successful in forecasting market returns or in determining the weighting of investment positions that will enable the Fund to achieve its investment objective. In managing the Fund’s portfolio, the *Adviser* may from time to time utilize certain tax management techniques which consider the potential impact of federal income tax on shareholders’ investment return.

The Fund makes use of derivative instruments, which may be used for hedging purposes and to enhance returns. The Fund may use derivatives as a substitute for investing in conventional securities and for investment purposes to increase its economic exposure to a particular security, currency or index in a cost effective manner. The Fund’s use of derivatives such as futures contracts, forward contracts and certain other Equity Instruments (that are derivative instruments) will have the economic effect of financial leverage. Financial leverage magnifies exposure to the swings in prices of an asset underlying an Equity Instrument and results in increased *volatility*, which means the Fund will have

the potential for greater gains, as well as the potential for greater losses, than if the Fund does not use Equity Instruments that have a leveraging effect. Leveraging tends to magnify, sometimes significantly, the effect of any increase or decrease in the Fund's exposure to an asset and may cause the Fund's NAV to be volatile. For example, if the Adviser seeks to gain enhanced exposure to a specific asset through an Equity Instrument providing leveraged exposure to the asset and that Equity Instrument increases in value, the gain to the Fund will be magnified; however, if that investment decreases in value, the loss to the Fund will be magnified. A decline in the Fund's assets due to losses magnified by the Equity Instruments providing leveraged exposure may require the Fund to liquidate portfolio positions to satisfy its obligations, to meet redemption requests or to meet asset segregation requirements when it may not be advantageous to do so. There is no assurance that the Fund's use of Equity Instruments providing enhanced exposure will enable the Fund to achieve its investment objective. In addition, to attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

The Adviser utilizes portfolio optimization techniques to determine trading activity, taking into account the transaction costs associated with trading each Equity Instrument. The Fund employs sophisticated proprietary trading techniques in an effort to mitigate trading costs and execution impact on the Fund.

The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.

Details About the AQR Global Equity Fund

INVESTMENT OBJECTIVE

The AQR Global Equity Fund (the “Fund”) seeks long-term capital appreciation.

There can be no assurance that the Fund will be successful in achieving its investment objective.

PRINCIPAL INVESTMENT STRATEGIES

The Fund seeks to outperform, after expenses, the *MSCI World Index* (the *Global Equity Benchmark*) while seeking to control its *tracking error* relative to this benchmark. The Fund will target an average forecasted *tracking error* of approximately 4.0% relative to the *Global Equity Benchmark* over a long-term business cycle, but actual *tracking error* will vary based on market conditions, sector positioning, securities selection and other factors. The *Global Equity Benchmark* is a free float-adjusted market capitalization index that is designed to measure the performance of equities in developed markets, including the United States and Canada.

Generally, the Fund will invest in instruments of companies located in a number of different countries throughout the world, one of which may be the United States. Under normal circumstances, the Fund will invest significantly (at least 40%) in companies (i) organized or located outside the U.S., (ii) whose primary trading market is located outside the U.S. or (iii) doing a substantial amount of business outside the U.S., which the Fund considers as a company that derives at least 50% of its revenue from business outside the U.S. or has at least 50% of its assets outside the U.S. The Fund will allocate its assets among various regions and countries, including the United States (but in no less than three different countries outside of the U.S.).

The Fund’s portfolio normally will be managed by both overweighting and underweighting securities, countries and currencies relative to the *Global Equity Benchmark*, using the *Adviser’s* proprietary quantitative return forecasting models and systematic risk-control methods. The *Adviser* starts with the securities that are included in the *Global Equity Benchmark* and augments them with additional securities that are deemed to have similar characteristics. From this investment universe, the *Adviser* employs a disciplined approach emphasizing both top-down country/currency allocation and bottom-up security selection decisions that include selection of individual stocks within industries as well as explicit industry/sector selection.

The *Adviser* uses a set of value, *momentum* and other factors to generate an investment portfolio based on the *Adviser’s* global asset allocation models and security selection procedures. The *Adviser* believes that a better risk-adjusted return may be achievable by applying both value and *momentum* strategies simultaneously.

- Value strategies favor securities that appear cheap based on fundamental measures, often as a result of lack of favor. Examples of value strategies include using price-to-earnings and price-to-book ratios for choosing individual equities and countries, and purchasing power parity for choosing currencies.
- *Momentum* strategies favor securities with strong recent performance. Examples of *momentum* strategies include simple price *momentum* for choosing individual equities and countries, and foreign exchange rate *momentum* for selecting currencies.
- In addition to these two main strategies, the *Adviser* may use a number of additional quantitative strategies based on the *Adviser’s* proprietary research.

The *Adviser* views the selection of individual securities, countries and currencies as three independent decisions. The *Adviser* may utilize country index futures, index swaps, swaps on equity index futures, currencies and foreign currency forwards to overweight or underweight the country and currency exposure of the overall portfolio relative to the *Global Equity Benchmark*.

In seeking to achieve its investment objective, the Fund may enter into both “long” and “short” positions in equities and currencies using derivative instruments. The owner of a “long” position in a derivative instrument will benefit from an increase in the price of the underlying investment. The owner of a “short” position in a derivative instrument will benefit from a decrease in the price of the underlying investment. Short exposure to any currency generally will not exceed -20% of the net assets of the Fund. For example, if 5% of the Fund’s net assets are invested in Swiss stocks held long, generally the Fund’s collective short positions in Swiss francs would be 25% or less of the Fund’s net assets. Foreign currency denominated stock positions and the notional value of foreign currency spot and forward positions are included in determining aggregate long and short currency exposure.

Short exposure to the equity of issuers in a particular country generally will not exceed -12% of the net assets of the Fund. In other words, the total value of stock positions held long in a country, plus the notional value of equity derivatives providing long exposure to issuers in that country, minus the notional value of equity derivatives providing short exposure to issuers in that country must be greater than -12% of the Fund’s net assets. For example, if 3% of the net assets of the Fund are invested in Spanish equities, generally the largest short position in Spanish equity futures would be 15% of the Fund’s net assets.

Generally, the Fund will invest at least 80% of its net assets (including any borrowings for investment purposes) in equity and equity-related instruments (including, but not limited to, exchange-traded funds, equity index futures, equity index swaps, swaps on equity index futures and depositary receipts). The Fund will invest in companies with a broad range of market capitalizations. The Fund has no market capitalization constraints. The Fund invests primarily in securities comprising the *Global Equity Benchmark* and also invests to some extent in securities outside the *Global Equity Benchmark* which the *Adviser* deems to have similar investment characteristics to the securities comprising the *Global Equity Benchmark*. The Fund may invest in or use rights, warrants, equity swaps, financial futures contracts, swaps on futures contracts, forward foreign currency contracts and other types of derivative instruments in seeking to achieve its investment objective. A portion of the Fund's assets may be held in cash or cash equivalents including, but not limited to, money market instruments, interests in short-term investment funds or shares of money market or short-term bond funds. However, under normal market conditions, net economic exposure to the equity markets (i.e. the total value of equity positions plus the net notional value of equity derivatives) will generally equal at least 95% of the Fund's net assets.

In general, the Fund expects to be broadly diversified, typically holding the securities of between 250 and 900 different issuers. The Fund generally will not invest more than 5% of its net assets, measured at the time of purchase, in a single class of the securities of any issuer within the *Global Equity Benchmark*. The Fund will also be diversified by sector under normal market conditions. The maximum allocation of Fund assets to any particular global sector relative to the weighting of that sector in the *Global Equity Benchmark*, generally will not exceed (or be less than) 15%. Equity derivatives that gain exposure to countries, rather than individual stocks or sectors, are excluded from these sector exposure calculations.

The Fund may invest to a lesser extent in securities of issuers, countries and currencies not included in the *Global Equity Benchmark*. However, the *Adviser* does not currently expect such securities to be a significant component of the Fund's investment portfolio.

To attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

The *Adviser* believes that the management of transaction costs should be considered when determining whether an investment is attractive. Transaction costs include commissions, bid-ask spreads, market impact and time delays (time between decision and implementation when a market may move in favor of or against the Fund). The *Adviser* considers transaction costs both in its forecasting model and optimization process to seek to ensure that trades for the Fund will remain attractive after transaction costs are reflected.

The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.

Details About the AQR International Equity Fund

INVESTMENT OBJECTIVE

The AQR International Equity Fund (the “Fund”) seeks long-term capital appreciation.

There can be no assurance that the Fund will be successful in achieving its investment objective.

PRINCIPAL INVESTMENT STRATEGIES

The Fund seeks to outperform, after expenses, the *MSCI EAFE Index* (the *International Equity Benchmark*) while seeking to control its *tracking error* relative to this benchmark. The Fund will target a forecasted *tracking error* generally in the range of 3-7% relative to the *International Equity Benchmark* over a long-term business cycle, but actual *tracking error* will vary based on market conditions, sector positioning, securities selection and other factors. The *International Equity Benchmark* is a free float-adjusted market capitalization index that is designed to measure the performance of equities in developed markets, excluding the United States and Canada.

The Fund’s portfolio normally will be managed by both overweighting and underweighting securities, countries and currencies relative to the *International Equity Benchmark*, using the *Adviser’s* proprietary quantitative return forecasting models and systematic risk-control methods. The *Adviser* starts with the securities that are included in the *International Equity Benchmark* and augments them with additional securities that are deemed to have similar characteristics. From this investment universe, the *Adviser* employs a disciplined approach emphasizing both top-down country/currency allocation and bottom-up security selection decisions that include selection of individual stocks within industries as well as explicit industry/sector selection.

The *Adviser* uses a set of value, *momentum* and other factors to generate an investment portfolio based on the *Adviser’s* global asset allocation models and security selection procedures. The *Adviser* believes that a better risk-adjusted return may be achievable by applying both value and *momentum* strategies simultaneously:

- Value strategies favor securities that appear cheap based on fundamental measures, often as a result of lack of favor. Examples of value strategies include using price-to-earnings and price-to-book ratios for choosing individual equities and countries, and purchasing power parity for choosing currencies.
- *Momentum* strategies favor securities with strong recent performance. Examples of *momentum* strategies include simple price *momentum* for choosing individual equities and countries, and foreign exchange rate *momentum* for selecting currencies.
- In addition to these two main strategies, the *Adviser* may use a number of additional quantitative strategies based on the *Adviser’s* proprietary research.

The *Adviser* views the selection of individual securities, countries and currencies as three independent decisions. The *Adviser* may utilize country index futures, index swaps, swaps on equity index futures, currencies and foreign currency forwards to overweight or underweight the country and currency exposure of the overall portfolio relative to the *International Equity Benchmark*.

Generally, the Fund will invest at least 80% of its net assets (including any borrowings for investment purposes) in equity and equity-related instruments (including, but not limited to, exchange-traded funds, equity index futures, equity index swaps, swaps on equity index futures and depositary receipts). The Fund will invest in companies with a broad range of market capitalizations, including smaller capitalization companies. The Fund invests primarily in securities comprising the *International Equity Benchmark* and also invests to some extent in securities outside the *International Equity Benchmark* which the *Adviser* deems to have similar investment characteristics to the securities comprising the *International Equity Benchmark*. The Fund may invest in or use rights, warrants, equity swaps, financial futures contracts, swaps on futures contracts, forward foreign currency contracts and other types of derivative instruments in seeking to achieve its investment objective. A portion of the Fund’s assets will be held in cash or cash equivalents including, but not limited to, money market instruments, interests in short-term investment funds or shares of money market or short-term bond funds.

The Fund may invest to a lesser extent in securities of issuers in countries and currencies not included in the *International Equity Benchmark*. However, the *Adviser* does not currently expect such securities to be a significant component of the Fund’s investment portfolio.

To attempt to increase its income or *total return*, the Fund may lend its portfolio securities to certain types of eligible borrowers.

The *Adviser* believes that the management of transaction costs should be considered when determining whether an investment is attractive. Transaction costs include commissions, bid-ask spreads, market impact and time delays (time between decision and implementation when a market may move in favor of or against the Fund). The *Adviser* considers transaction costs both in its forecasting model and optimization process to seek to ensure that trades for the Fund will remain attractive after transaction costs are reflected.

The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.

Details About the AQR Large Cap Relaxed Constraint Equity Fund

INVESTMENT OBJECTIVE

The AQR Large Cap Relaxed Constraint Equity Fund (the “Fund”) seeks long-term capital appreciation.

There can be no assurance that the Fund will be successful in achieving its investment objective.

PRINCIPAL INVESTMENT STRATEGIES

The Fund seeks to outperform, after expenses, the *Russell 1000[®] Index* while seeking to control its *tracking error* relative to this benchmark. The Fund will target a long-term average forecasted *tracking error* of 3% to 4% relative to the *Russell 1000[®] Index*. Actual realized *tracking error* will vary based on market conditions and other factors.

The Fund pursues its investment objective by investing, under normal market conditions, at least 80% of its net assets (including borrowings for investment purposes) in equity securities or equity-related instruments (together, “equity securities”) of large-cap companies. Equity securities include, but are not limited to, common stocks, exchange-traded funds and similar pooled investment vehicles, equity index futures and depositary receipts.

The Fund’s portfolio will be managed by both overweighting and underweighting securities, industries, and sectors relative to the *Russell 1000[®] Index*. “Relaxed Constraint” in the Fund’s name reflects the Fund’s strategy to take long as well as short positions in the equity securities in which it invests, as opposed to a traditional “long-only” portfolio which does not establish short positions (*i.e.*, relaxing the “long-only” constraint). Selling securities short allows the Fund to reflect to a greater extent, compared to a long-only approach, the *Adviser’s* views on securities it expects to underperform. Selling securities short also allows the Fund to establish additional long positions using the short sale proceeds, and thereby take greater advantage, compared to a long-only approach, of the *Adviser’s* views on securities it expects to outperform. Through the reinvestment of the short sale proceeds, the Fund generally intends to target a long exposure of 130% of the Fund’s net assets with a short exposure of 30% of the Fund’s net assets. Actual long and short exposures, however, will vary according to market conditions. The Fund’s long exposures are expected to range between 120% and 140% of the Fund’s net assets. The Fund’s short exposures are expected to range between 20% and 40% of the Fund’s net assets.

The Fund, when taking a “long” equity position, will purchase a security that will benefit from an increase in the price of that security. When taking a “short” equity position, the Fund borrows the security from a third party and sells it at the then current market price. A “short” equity position will benefit from a decrease in price of the security and will lose value if the price of the security increases.

In constructing the Fund’s portfolio, the *Adviser* utilizes a quantitative investment process. A quantitative investment process is a systematic method of evaluating securities and other assets by analyzing a variety of data through the use of models—or processes—to generate an investment opinion. The models consider a wide range of factors, including, but not limited to, value and *momentum*.

- Value strategies favor securities that appear cheap based on fundamental measures, often as a result of lack of favor. Examples of value strategies include using price-to-earnings and price-to-book ratios.
- *Momentum* strategies favor securities with strong recent performance and positive changes in fundamentals.

In addition to these two main factors, the *Adviser* may use a number of additional factors based on the *Adviser’s* proprietary research, including but not limited to, quality, investor sentiment and management signaling. The *Adviser* may add to or modify the factors employed in selecting investments.

The *Adviser* determines the long or short weight of each equity security in the portfolio using portfolio optimization techniques, taking into account the *Adviser’s* assessment of attractiveness of the equity security based on various factors, including those described above, stock weights in the benchmark index, estimated transaction costs associated with trading each equity security, and additional criteria that form part of the *Adviser’s* security selection process.

The Fund generally invests in large-cap U.S. companies, which the *Adviser* generally considers to be those companies with market capitalizations within the range of the *Russell 1000[®] Index* at the time of purchase. As of December 31, 2017, the market capitalization of the companies comprising the *Russell 1000[®] Index* ranged from \$1.1 billion to \$860.9 billion. The Fund may also invest in mid-cap securities.

The Fund invests significantly in equity securities. The Fund may also invest in or use financial futures contracts as well as exchange-traded funds and similar pooled investment vehicles, for hedging purposes, to gain exposure to the equity market and to maintain liquidity to pay for redemptions. A portion of the Fund’s assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

As with equity positions, the Fund may also take “long” and “short” positions in derivative instruments, such as equity index futures contracts. A “long” position in a derivative instrument will benefit from an increase in the price of the underlying instrument. A “short” position in a derivative instrument will benefit from a decrease in price of the underlying instrument and will lose value if the price of the underlying instrument increases.

The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.

Details About the AQR Small Cap Relaxed Constraint Equity Fund

INVESTMENT OBJECTIVE

The AQR Small Cap Relaxed Constraint Equity Fund (the “Fund”) seeks long-term capital appreciation.

There can be no assurance that the Fund will be successful in achieving its investment objective.

PRINCIPAL INVESTMENT STRATEGIES

The Fund seeks to outperform, after expenses, the *Russell 2000*[®] *Index* while seeking to control its *tracking error* relative to this benchmark. The Fund will target a long-term average forecasted *tracking error* of 4% to 5% relative to the *Russell 2000*[®] *Index*. Actual realized *tracking error* will vary based on market conditions and other factors.

The Fund pursues its investment objective by investing, under normal market conditions, at least 80% of its net assets (including borrowings for investment purposes) in equity securities or equity-related instruments (together, “equity securities”) of small-cap companies. Equity securities include, but are not limited to, common stocks, exchange-traded funds and similar pooled investment vehicles, equity index futures and depositary receipts.

The Fund’s portfolio will be managed by both overweighting and underweighting securities, industries, and sectors relative to the *Russell 2000*[®] *Index*. “Relaxed Constraint” in the Fund’s name reflects the Fund’s strategy to take long as well as short positions in the equity securities in which it invests, as opposed to a traditional “long-only” portfolio which does not establish short positions (*i.e.*, relaxing the “long-only” constraint). Selling securities short allows the Fund to reflect to a greater extent, compared to a long-only approach, the *Adviser’s* views on securities it expects to underperform. Selling securities short also allows the Fund to establish additional long positions using the short sale proceeds, and thereby take greater advantage, compared to a long-only approach, of the *Adviser’s* views on securities it expects to outperform. Through the reinvestment of the short sale proceeds, the Fund generally intends to target a long exposure of 130% of the Fund’s net assets with a short exposure of 30% of the Fund’s net assets. Actual long and short exposures, however, will vary according to market conditions. The Fund’s long exposures are expected to range between 120% and 140% of the Fund’s net assets. The Fund’s short exposures are expected to range between 20% and 40% of the Fund’s net assets.

The Fund, when taking a “long” equity position, will purchase a security that will benefit from an increase in the price of that security. When taking a “short” equity position, the Fund borrows the security from a third party and sells it at the then current market price. A “short” equity position will benefit from a decrease in price of the security and will lose value if the price of the security increases.

In constructing the Fund’s portfolio, the *Adviser* utilizes a quantitative investment process. A quantitative investment process is a systematic method of evaluating securities and other assets by analyzing a variety of data through the use of models—or processes—to generate an investment opinion. The models consider a wide range of factors, including, but not limited to, value and *momentum*.

- Value strategies favor securities that appear cheap based on fundamental measures, often as a result of lack of favor. Examples of value strategies include using price-to-earnings and price-to-book ratios.
- *Momentum* strategies favor securities with strong recent performance and positive changes in fundamentals.

In addition to these two main factors, the *Adviser* may use a number of additional factors based on the *Adviser’s* proprietary research, including but not limited to, quality, investor sentiment and management signaling. The *Adviser* may add to or modify the factors employed in selecting investments.

The *Adviser* determines the long or short weight of each equity security in the portfolio using portfolio optimization techniques, taking into account the *Adviser’s* assessment of attractiveness of the equity security based on various factors, including those described above, stock weights in the benchmark index, estimated transaction costs associated with trading each equity security, and additional criteria that form part of the *Adviser’s* security selection process.

The Fund generally invests in small-cap U.S. companies, which the *Adviser* generally considers to be those companies with market capitalizations within the range of the *Russell 2000*[®] *Index* at the time of purchase. As of December 31, 2017, the market capitalization of the companies comprising the *Russell 2000*[®] *Index* ranged from \$23 million to \$9.4 billion.

The Fund invests significantly in equity securities. The Fund may also invest in or use financial futures contracts as well as exchange-traded funds and similar pooled investment vehicles, for hedging purposes, to gain exposure to the equity market and to maintain liquidity to pay for redemptions. A portion of the Fund’s assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

As with equity positions, the Fund may also take “long” and “short” positions in derivative instruments, such as equity index futures contracts. A “long” position in a derivative instrument will benefit from an increase in the price of the underlying instrument. A “short” position in a derivative instrument will benefit from a decrease in price of the underlying instrument and will lose value if the price of the underlying instrument increases.

The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.

Details About the AQR International Relaxed Constraint Equity Fund

INVESTMENT OBJECTIVE

The AQR International Relaxed Constraint Equity Fund (the “Fund”) seeks long-term capital appreciation.

There can be no assurance that the Fund will be successful in achieving its investment objective.

PRINCIPAL INVESTMENT STRATEGIES

The Fund seeks to outperform, after expenses, the *MSCI EAFE Index* while seeking to control its *tracking error* relative to this benchmark. The Fund will target a long-term average forecasted *tracking error* of 3% to 4% relative to the *MSCI EAFE Index*. Actual realized *tracking error* will vary based on market conditions and other factors.

The Fund pursues its investment objective by investing, under normal market conditions, at least 80% of its net assets (including borrowings for investment purposes) in equity securities or equity-related instruments (together, “equity securities”) of non-U.S. companies. Equity securities include, but are not limited to, common stocks, exchange-traded funds and similar pooled investment vehicles, equity index futures and depositary receipts.

The Fund’s portfolio will be managed by both overweighting and underweighting securities, industries, and sectors relative to the *MSCI EAFE Index*. “Relaxed Constraint” in the Fund’s name reflects the Fund’s strategy to take long as well as short positions in the equity securities in which it invests, as opposed to a traditional “long-only” portfolio which does not establish short positions (*i.e.*, relaxing the “long-only” constraint). Selling securities short allows the Fund to reflect to a greater extent, compared to a long-only approach, the *Adviser’s* views on securities it expects to underperform. Selling securities short also allows the Fund to establish additional long positions using the short sale proceeds, and thereby take greater advantage, compared to a long-only approach, of the *Adviser’s* views on securities it expects to outperform. Through the reinvestment of the short sale proceeds, the Fund generally intends to target a long exposure of 130% of the Fund’s net assets with a short exposure of 30% of the Fund’s net assets. Actual long and short exposures, however, will vary according to market conditions. The Fund’s long exposures are expected to range between 120% and 140% of the Fund’s net assets. The Fund’s short exposures are expected to range between 20% and 40% of the Fund’s net assets.

The Fund, when taking a “long” equity position, will purchase a security that will benefit from an increase in the price of that security. When taking a “short” equity position, the Fund borrows the security from a third party and sells it at the then current market price. A “short” equity position will benefit from a decrease in price of the security and will lose value if the price of the security increases.

In constructing the Fund’s portfolio, the *Adviser* utilizes a quantitative investment process. A quantitative investment process is a systematic method of evaluating securities and other assets by analyzing a variety of data through the use of models—or processes—to generate an investment opinion. The models consider a wide range of factors, including, but not limited to, value and *momentum*.

- Value strategies favor securities that appear cheap based on fundamental measures, often as a result of lack of favor. Examples of value strategies include using price-to-earnings and price-to-book ratios.
- *Momentum* strategies favor securities with strong recent performance and positive changes in fundamentals.

In addition to these two main factors, the *Adviser* may use a number of additional factors based on the *Adviser’s* proprietary research, including but not limited to, quality, investor sentiment and management signaling. The *Adviser* may add to or modify the factors employed in selecting investments.

The *Adviser* determines the long or short weight of each equity security in the portfolio using portfolio optimization techniques, taking into account the *Adviser’s* assessment of attractiveness of the equity security based on various factors, including those described above, stock weights in the benchmark index, estimated transaction costs associated with trading each equity security, and additional criteria that form part of the *Adviser’s* security selection process.

The Fund generally invests in large- and mid-cap companies included in the *MSCI EAFE Index* or located in countries included in the *MSCI EAFE Index* at the time of purchase. The Fund considers large- and mid-cap companies to be companies with market capitalizations within the range of the constituents of the *MSCI EAFE Index* at the time of purchase.

The Fund invests significantly in equity securities. The Fund may also invest in or use financial futures contracts, forward foreign currency contracts as well as foreign currencies, exchange-traded funds and similar pooled investment vehicles, for hedging purposes, to gain exposure to the equity market and to maintain liquidity to pay for redemptions. A portion of the Fund’s assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

As with equity positions, the Fund may also take “long” and “short” positions in derivative instruments, such as equity index futures contracts or forward foreign currency contracts. A “long” position in a derivative instrument will benefit from an increase in the price of the underlying instrument. A “short” position in a derivative instrument will benefit from a decrease in price of the underlying instrument and will lose value if the price of the underlying instrument increases.

The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.

Details About the AQR Emerging Relaxed Constraint Equity Fund

INVESTMENT OBJECTIVE

The AQR Emerging Relaxed Constraint Equity Fund (the “Fund”) seeks long-term capital appreciation.

There can be no assurance that the Fund will be successful in achieving its investment objective.

PRINCIPAL INVESTMENT STRATEGIES

The Fund seeks to outperform, after expenses, the *MSCI Emerging Markets Index* while seeking to control its *tracking error* relative to this benchmark. The Fund will target a long-term average forecasted *tracking error* of 4% to 6% relative to the *MSCI Emerging Markets Index*. Actual realized *tracking error* will vary based on market conditions and other factors.

The Fund pursues its investment objective by investing, under normal market conditions, at least 80% of its net assets (including borrowings for investment purposes) in equity securities or equity-related instruments (together, “equity securities”) of emerging market companies. Equity securities include, but are not limited to, common stocks, exchange-traded funds and similar pooled investment vehicles, equity index futures, equity swaps and depositary receipts.

The Fund's portfolio will be managed by both overweighting and underweighting securities, industries, and sectors relative to the *MSCI Emerging Markets Index*. “Relaxed Constraint” in the Fund's name reflects the Fund's strategy to take long as well as short positions in the equity securities in which it invests, as opposed to a traditional “long-only” portfolio which does not establish short positions (*i.e.*, relaxing the “long-only” constraint). Selling securities short allows the Fund to reflect to a greater extent, compared to a long-only approach, the *Adviser's* views on securities it expects to underperform. Selling securities short also allows the Fund to establish additional long positions using the short sale proceeds, and thereby take greater advantage, compared to a long-only approach, of the *Adviser's* views on securities it expects to outperform. Through the reinvestment of the short sale proceeds, the Fund generally intends to target a long exposure of 130% of the Fund's net assets with a short exposure of 30% of the Fund's net assets. Actual long and short exposures, however, will vary according to market conditions. The Fund's long exposures are expected to range between 120% and 140% of the Fund's net assets. The Fund's short exposures are expected to range between 20% and 40% of the Fund's net assets.

The Fund, when taking a “long” equity position, will purchase a security that will benefit from an increase in the price of that security. When taking a “short” equity position, the Fund borrows the security from a third party and sells it at the then current market price. A “short” equity position will benefit from a decrease in price of the security and will lose value if the price of the security increases.

In constructing the Fund's portfolio, the *Adviser* utilizes a quantitative investment process. A quantitative investment process is a systematic method of evaluating securities and other assets by analyzing a variety of data through the use of models—or processes—to generate an investment opinion. The models consider a wide range of factors, including, but not limited to, value and *momentum*.

- Value strategies favor securities that appear cheap based on fundamental measures, often as a result of lack of favor. Examples of value strategies include using price-to-earnings and price-to-book ratios.
- *Momentum* strategies favor securities with strong recent performance and positive changes in fundamentals.

In addition to these two main factors, the *Adviser* may use a number of additional factors based on the *Adviser's* proprietary research, including but not limited to, quality, investor sentiment and management signaling. The *Adviser* may add to or modify the factors employed in selecting investments.

The *Adviser* determines the long or short weight of each equity security in the portfolio using portfolio optimization techniques, taking into account the *Adviser's* assessment of attractiveness of the equity security based on various factors, including those described above, stock weights in the benchmark index, estimated transaction costs associated with trading each equity security, and additional criteria that form part of the *Adviser's* security selection process.

The Fund generally invests in large- and mid-cap companies included in the *MSCI Emerging Markets Index* or located in countries included in the *MSCI Emerging Markets Index* at the time of purchase. The Fund considers large- and mid-cap companies to be companies with market capitalizations within the range of the constituents of the *MSCI Emerging Markets Index* at the time of purchase.

The Fund invests significantly in equity securities. The Fund may also invest in or use financial futures contracts, forward foreign currency contracts, equity swaps as well as foreign currencies, exchange-traded funds and similar pooled investment vehicles, for hedging purposes, to gain exposure to the equity market and to maintain liquidity to pay for redemptions. A portion of the Fund's assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

As with equity positions, the Fund may also take “long” and “short” positions in derivative instruments, such as equity index futures contracts, forward foreign currency contracts or equity swaps. A “long” position in a derivative instrument will benefit from an increase in the price of the underlying instrument. A “short” position in a derivative instrument will benefit from a decrease in price of the underlying instrument and will lose value if the price of the underlying instrument increases.

The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term NAV fluctuations, which at times, may be significant and rapid, however, all investments long- or short-term are subject to risk of loss.

How the Funds Pursue Their Investment Objectives

INVESTMENT TECHNIQUES

In addition to the principal investment strategies described above, the Funds may employ the following techniques in pursuing their investment objectives.

Securities Lending (all Funds other than the AQR Relaxed Constraint Equity Funds): To attempt to increase its income or *total return*, each Fund may lend its portfolio securities to certain types of eligible borrowers in amounts up to 33⅓% of its total assets, which may include collateral. Each loan will be secured continuously by collateral in the form of cash, high quality money market instruments or securities issued by the U.S. government or its agencies or instrumentalities. Collateral will be received and maintained by the Fund's custodian concurrent with delivery of the loaned securities and kept in a segregated account or designated on the records of the custodian for the benefit of the Fund. Each Fund has a right to call a loan at any time and require the borrower to redeliver the borrowed securities to the Fund within the settlement time specified in the loan agreement or be subject to a "buy in." Each Fund will generally not have the right to vote securities while they are being loaned, but it is expected that the *Adviser* will call a loan in anticipation of any important vote. Securities lending will be conducted by a securities lending agent approved by the *Trust's Board of Trustees*. The securities lending agent maintains a list of broker-dealers, banks or other institutions that it has determined to be creditworthy. The Funds will only enter into loan arrangements with borrowers on the approved list. Dividend equivalent payments received on portfolio securities that have been lent will not be eligible for designation as qualified dividend income or for the dividends renewed deduction.

Temporary Defensive Positions (all Funds): For temporary defensive purposes, each Fund may restrict the markets in which it invests and may hold uninvested cash or invest without limitation in cash equivalents such as money market instruments, U.S. treasury bills, interests in short-term investment funds, repurchase agreements, or shares of money market or short-term bond funds, even if the investments are inconsistent with the Fund's principal investment strategies. To the extent a Fund invests in these temporary investments in this manner, the Fund may not achieve its investment objective.

Segregation of Assets (all Funds): As an open-end investment company registered with the *SEC*, each Fund is subject to the federal securities laws, including the *1940 Act*, the rules thereunder, and various *SEC* and *SEC* staff interpretive positions. In accordance with these laws, rules and positions, each Fund must "set aside" (often referred to as "asset segregation") liquid assets, or engage in other *SEC* or staff-approved measures, to "cover" open positions with respect to certain kinds of derivative instruments. In the case of futures contracts that are not contractually required to cash settle, for example, each Fund must set aside liquid assets equal to such contracts' full notional value while the positions are open. With respect to futures contracts that are contractually required to cash settle, however, each Fund is permitted to set aside liquid assets in an amount equal to each Fund's daily marked-to-market net obligations (*i.e.*, each Fund's daily net liability) under the contracts, if any, rather than such contracts' full notional value. Futures contracts, forward contracts and other applicable securities and instruments that settle physically will be treated as cash settled for asset segregation purposes when the Fund has entered into a contractual arrangement with a third party futures commission merchant or other counterparty to off-set the Fund's exposure under the contract and, failing that, to assign its delivery obligation under the contract to the counterparty. Each Fund reserves the right to modify its asset segregation policies in the future to comply with any changes in the positions from time to time articulated by the *SEC* or its staff regarding asset segregation.

Each Fund generally will use its money market instruments or other liquid assets to cover its obligations as required by the *1940 Act*, the rules thereunder, and applicable *SEC* and *SEC* staff positions. The *Adviser* will monitor each Fund's use of derivatives and will take action as necessary for the purpose of complying with the asset segregation policy stated above. Such actions may include the sale of each Fund's portfolio investments. There is a possibility that segregation of a large percentage of a Fund's assets could impede portfolio management or the Fund's ability to meet redemption requests or other current obligations.

Float-Adjusted Market Capitalization (all Funds): When market capitalization is used in the construction of a Fund's portfolio, the market capitalization may be float-adjusted. Float-adjusted market capitalization is a method of calculating the market capitalization of a security under which only the shares of the security that are readily available for purchase on open markets (as opposed to the total shares of the security outstanding) are included in the calculation of the security's market capitalization. As a result, securities with less float (*i.e.*, less liquidity) are underweighted comparative to securities with greater float (*i.e.*, greater liquidity).

Risk Factors

All investments, including those in *mutual funds*, have risks and it is possible that you could lose money by investing in a Fund. No one investment is suitable for all investors. Each Fund is intended for long-term investors. The risks identified below are the principal risks of investing in a Fund. The Summary section for each Fund and the below matrix lists the principal risks applicable to that Fund. This section provides more detailed information about each risk.

Common Stock Risk: Each Fund may invest in, or have exposure to, common stocks, which are a type of equity security that represents an ownership interest in a corporation. Common stocks are subject to greater fluctuations in market value than certain other asset classes as a result of such factors as a company's business performance, investor perceptions, stock market trends and general economic conditions. The rights of common stockholders are subordinate to all other claims on a company's assets, including debt holders and preferred stockholders. Therefore, a Fund could lose money if a company in which it invests becomes financially distressed.

Counterparty Risk: The Fund may enter into various types of derivative contracts as described below under "Derivatives Risk". Many of these derivative contracts will be privately negotiated in the over-the-counter market. These contracts also involve exposure to credit risk, since contract performance depends in part on the financial condition of the counterparty. If a privately negotiated over-the-counter contract calls for payments by the Fund, the Fund must be prepared to make such payments when due. In addition, if a counterparty's creditworthiness declines, the Fund may not receive payments owed under the contract, or such payments may be delayed under such circumstances and the value of agreements with such counterparty can be expected to decline, potentially resulting in losses to the Fund.

Currency Risk: Currency risk is the risk that changes in currency exchange rates will negatively affect securities denominated in, and/or receiving revenues in, foreign currencies. Adverse changes in currency exchange rates (relative to the U.S. dollar) may erode or reverse any potential gains from a Fund's investments in securities denominated in a foreign currency or may widen existing losses.

Currency exchange rates may be particularly affected by the relative rates of inflation, interest rate levels, the balance of payments and the extent of governmental surpluses or deficits in such foreign countries and in the United States, all of which are in turn sensitive to the monetary, fiscal and trade policies pursued by the governments of such foreign countries, the United States and other countries important to international trade and finance. Governments may use a variety of techniques, such as intervention by their central bank or imposition of regulatory controls or taxes, to affect the exchange rates of their respective currencies. They may also issue a new currency to replace an existing currency or alter the exchange rate or relative exchange characteristics by devaluation or revaluation of a currency. The liquidity and trading value of these foreign currencies could be affected by the actions of sovereign governments and central banks, which could change or interfere with theretofore freely determined currency valuation, fluctuations in response to other market forces and the movement of currencies across borders.

Derivatives Risk: The *Adviser* may make use of futures, forwards, swaps and other forms of derivative instruments. In general, a derivative instrument typically involves leverage, *i.e.*, it provides exposure to potential gain or loss from a change in the level of the market price of the underlying security, currency or commodity (or a basket or index) in a notional amount that exceeds the amount of cash or assets required to establish or maintain the derivative instrument. Adverse changes in the value or level of the underlying asset or index, which the Fund may not directly own, can result

in a loss to the Fund substantially greater than the amount invested in the derivative itself. Certain derivatives have the potential for unlimited loss, regardless of the size of the initial investment. The use of derivative instruments also exposes a Fund to additional risks and transaction costs. These instruments come in many varieties and have a wide range of potential risks and rewards, and may include, as further described in the “Principal Investment Strategies” section for each Fund, futures contracts, swaps, and/or forward foreign currency contracts. Additionally, to the extent a Fund is required to segregate or “set aside” (often referred to as “asset segregation”) liquid assets or otherwise cover open positions with respect to certain derivative instruments, the Fund may be required to sell portfolio instruments to meet these asset segregation requirements. There is a possibility that segregation involving a large percentage of a Fund’s assets could impede portfolio management or the Fund’s ability to meet redemption requests or other current obligations. Risks of these instruments include:

- that interest rates, securities prices and currency markets will not move in the direction that the portfolio managers anticipate;
- that prices of the instruments and the prices of underlying securities, interest rates or currencies they are designed to reflect do not move together as expected;
- that the skills needed to use these strategies are different than those needed to select portfolio securities;
- the possible absence of a liquid secondary market for any particular instrument and, for exchange-traded instruments, possible exchange-imposed price fluctuation limits, either of which may make it difficult or impossible to close out a position when desired;
- that adverse price movements in an instrument can result in a loss substantially greater than a Fund’s initial investment in that instrument (in some cases, the potential loss is unlimited);
- particularly in the case of privately-negotiated instruments, that the counterparty will not perform its obligations, which could cause the Fund to lose money;
- the inability to close out certain hedged positions to avoid adverse tax consequences, and the fact that some of these instruments may have uncertain tax implications for the Funds;
- the fact that “speculative position limits” imposed by the Commodity Futures Trading Commission (“CFTC”) and certain futures exchanges on net long and short positions may require the Funds to limit or unravel positions in certain types of instruments; in December 2016 the CFTC re-proposed new rules that, if adopted in substantially the same form, will impose speculative position limits on additional derivative instruments, which may further limit the Funds’ ability to trade futures contracts and swaps; and
- the high levels of *volatility* some of these instruments may exhibit, in some cases due to the high levels of leverage an investor may achieve with them.

In December 2015, the SEC proposed a new rule that would change the regulation of the use of derivatives by registered investment companies, such as the Fund. If the proposed rule is adopted and goes into effect, it could require modifications to the Fund’s investment strategies and use of derivatives.

Emerging Market Risk: A Fund may have exposure to emerging markets. Investing in emerging markets will, among other things, expose the Fund to all the risks described below in the “Foreign Investments Risk” section, and you should review that section carefully. However, there are greater risks involved in investing in emerging market countries and/or their securities markets than there are in more developed countries and/or markets. Generally, economic structures in these countries are less diverse and mature than those in developed countries, and their political systems are less stable. Investments in emerging market countries may be affected by national policies that restrict foreign investment in certain issuers or industries. Sanctions and other intergovernmental actions may be undertaken against an emerging market country, which may result in the devaluation of the country’s currency, a downgrade in the country’s credit rating, and a decline in the value and liquidity of the country’s securities. Sanctions could result in the immediate freeze of securities issued by an emerging market company or government, impairing the ability of a Fund to buy, sell, receive or deliver these securities. The small size of their securities markets and low trading volumes can make emerging market investments illiquid and more volatile than investments in developed countries and such securities may be subject to abrupt and severe price declines. A Fund may be required to establish special custody or other arrangements before investing. In addition, because the securities settlement procedures are less developed in these countries, the Fund may be required to deliver securities before receiving payment and may also be unable to complete transactions during market disruptions. The possible establishment of exchange controls or freezes on the convertibility of currency might adversely affect an investment in foreign securities.

Foreign Investments Risk: A Fund’s investments in foreign instruments, including depositary receipts, involve risks not associated with investing in U.S. instruments. Foreign markets may be less liquid, more volatile and subject to less government supervision than domestic markets. There may be difficulties enforcing contractual obligations, and it may

take more time for trades to clear and settle. The specific risks of investing in foreign instruments, among others, include:

- **Counterparty Risk:** A Fund may enter into foreign investment instruments with a counterparty, which will subject the Fund to counterparty risk (see “Counterparty Risk” above).
- **Currency Risk:** Currency risk is the risk that changes in currency exchange rates will negatively affect instruments denominated in, and/or receiving revenues in, foreign currencies. Adverse changes in currency exchange rates (relative to the U.S. dollar) may erode or reverse any potential gains from the Funds' investments in instruments denominated in a foreign currency or may widen existing losses. To the extent that a Fund is invested in foreign instruments while also maintaining currency positions, it may be exposed to greater combined risk. See “Currency Risk” above.
- **Geographic Risk:** If a Fund concentrates its investments in issuers located or doing business in any country or region, factors adversely affecting that country or region will affect the Fund's net asset value more than would be the case if the Fund had made more geographically diverse investments. The economies and financial markets of certain regions, such as Latin America or Asia, can be highly interdependent and decline all at the same time.
- **Political/Economic Risk:** Changes in economic and tax policies, government instability, war or other political or economic actions or factors may have an adverse effect on a Fund's foreign investments, potentially including expropriation and nationalization, confiscatory taxation, and the potential difficulty of repatriating funds to the United States.
- **Regulatory Risk:** Issuers of foreign instruments and foreign instruments markets are generally not subject to the same degree of regulation as are U.S. issuers and U.S. securities markets. The reporting, accounting and auditing standards of foreign countries may differ, in some cases significantly, from U.S. standards.
- **Transaction Costs Risk:** The costs of buying and selling foreign instruments, including tax, brokerage and custody costs, generally are higher than those involving domestic transactions.
- **Use of Foreign Currency Forward Agreements:** Foreign currency forward prices are influenced by, among other things, changes in balances of payments and trade, domestic and international rates of inflation, international trade restrictions and currency devaluations and revaluations. Investments in currency forward contracts may cause a Fund to maintain net short positions in any currency, including home country currency. In other words, the total value of short exposure to such currency (such as short spot and forward positions in such currency) may exceed the total value of long exposure to such currency (such as long individual equity positions, long spot and forward positions in such currency).

Forward and Futures Contract Risk: As described in the “Principal Investment Strategies” section for each Fund, a Fund may invest in forward and/or futures contracts. The successful use of forward and futures contracts draws upon the *Adviser's* skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of forward and futures contracts, which may adversely affect the Fund's NAV and *total return*, are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the *Adviser's* inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

Hedging Transactions Risk: The *Adviser* from time to time employs various hedging techniques. The success of a Fund's hedging strategy will be subject to the *Adviser's* ability to correctly assess the degree of correlation between the performance of the instruments used in the hedging strategy and the performance of the investments in the portfolio being hedged. Since the characteristics of many securities change as markets change or time passes, the success of a Fund's hedging strategy will also be subject to the *Adviser's* ability to continually recalculate, readjust, and execute hedges in an efficient and timely manner.

Hedging against a decline in the value of a portfolio position does not eliminate fluctuations in the values of those portfolio positions or prevent losses if the values of those positions decline. Rather, it establishes other positions designed to gain from those same declines, thus seeking to moderate the decline in the portfolio position's value. Such hedging transactions also limit the opportunity for gain if the value of the portfolio position should increase. For a variety of reasons, the *Adviser* may not seek to establish a perfect correlation between such hedging instruments and the portfolio holdings being hedged. Such imperfect correlation may prevent the Fund from achieving the intended hedge or expose the Fund to risk of loss. In addition, it is not possible to hedge fully or perfectly against any risk, and hedging entails its own costs (such as trading commissions and fees). The *Adviser* may determine, in its sole discretion, not to hedge against certain risks and certain risks may exist that cannot be hedged. Furthermore, the *Adviser* may not anticipate a particular risk so as to hedge against it effectively. Hedging transactions also limit the opportunity for gain if the value of a hedged portfolio position should increase.

High Portfolio Turnover Risk: The investment techniques and strategies utilized by the Fund, including investments made on a shorter-term basis or in derivative instruments or instruments with a maturity of one year or less at the time of acquisition, may result in frequent portfolio trading and high portfolio turnover. High portfolio turnover rates will cause the Fund to incur higher levels of brokerage fees and commissions, which may reduce performance, and may cause higher levels of current tax liability to shareholders in the Fund.

Investment in Other Investment Companies Risk: As with other investments, investments in other investment companies, including exchange-traded funds (“ETFs”), are subject to market and manager risk. In addition, if a Fund acquires shares of investment companies, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies. The Fund may invest in money market *mutual funds*. An investment in a money market *mutual fund* is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Although money market *mutual funds* that invest in U.S. government securities seek to preserve the value of the Fund’s investment at \$1.00 per share, it is possible to lose money by investing in a stable NAV money market *mutual fund*. Moreover, recent SEC rule amendments require prime money market *mutual funds* to use floating NAVs that do not preserve the value of the Fund’s investment at \$1.00 per share. These rule amendments may impact the Fund’s use of prime money market *mutual funds* for capital preservation purposes. A prime money market *mutual fund* may impose liquidity fees or temporary gates on redemptions if its weekly liquid assets fall below a designated threshold. If this were to occur, the Fund may lose money on its investment in the prime money market *mutual fund*, or the Fund may not be able to redeem its investment in the prime money market *mutual fund*.

Leverage Risk: As part of a Fund’s principal investment strategy, the Fund may enter into short sales and/or make investments in futures contracts, forward contracts, swaps and other derivative instruments. These investment activities provide the economic effect of financial leverage by creating additional investment exposure to the underlying instrument, as well as the potential for greater loss. **If the Fund uses leverage through activities such as entering into short sales or purchasing derivative instruments, the Fund has the risk that losses may exceed the net assets of the Fund.** The net asset value of a Fund while employing leverage will be more volatile and sensitive to market movements.

Manager Risk: If the *Adviser* makes poor investment decisions, it will negatively affect the Fund’s investment performance.

Market Risk: Each Fund is subject to market risk, which is the risk that the markets on which the Fund’s investments trade will increase or decrease in value. Market risk applies to every Fund investment. Prices may fluctuate widely over short or extended periods in response to company, market or economic news. Markets also tend to move in cycles, with periods of rising and falling prices. If there is a general decline in the securities and other markets, your investment in a Fund may lose value, regardless of the individual results of the securities and other instruments in which the Fund invests.

Mid-Cap Securities Risk: The Fund may invest in, or have exposure to, the securities of mid-cap companies. The prices of securities of mid-cap companies generally are more volatile than those of large capitalization companies and are more likely to be adversely affected than large-cap companies by changes in earnings results and investor expectations or poor economic or market conditions, including those experienced during a recession.

Model and Data Risk: Given the complexity of the investments and strategies of each Fund, the *Adviser* relies heavily on quantitative models and information and data supplied by third parties (“Models and Data”). Models and Data are used to construct sets of transactions and investments, to provide risk management insights, and to assist in hedging a Fund’s investments.

When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon expose a Fund to potential risks. For example, by relying on Models and Data, the *Adviser* may be induced to buy certain investments at prices that are too high, to sell certain other investments at prices that are too low, or to miss favorable opportunities altogether. Similarly, any hedging based on faulty Models and Data may prove to be unsuccessful. The Fund bears the risk that the quantitative models used by the *Adviser* will not be successful in selecting companies for investment or in determining the weighting of investment positions that will enable the Fund to achieve its investment objective.

Some of the models used by the *Adviser* for one or more Funds are predictive in nature. The use of predictive models has inherent risks. For example, such models may incorrectly forecast future behavior, leading to potential losses on a cash flow and/or a mark-to-market basis. In addition, in unforeseen or certain low-probability scenarios (often involving a market disruption of some kind), such models may produce unexpected results, which can result in losses for a Fund. Furthermore, because predictive models are usually constructed based on historical data supplied by third parties, the success of relying on such models may depend heavily on the accuracy and reliability of the supplied historical data.

All models rely on correct market data inputs. If incorrect market data is entered into even a well-founded model, the resulting information will be incorrect. However, even if market data is input correctly, “model prices” will often differ substantially from market prices, especially for instruments with complex characteristics, such as derivative instruments.

Model prices can differ from market prices as model prices are typically based on assumptions and estimates derived from recent market data that may not remain realistic or relevant in the future. To address these issues, the *Adviser* evaluates model prices and outputs versus recent transactions or similar securities, and as a result, such models may be modified from time to time.

Momentum Style Risk: Investing in or having exposure to securities with positive *momentum* entails investing in securities that have had above-average recent returns. These securities may be more volatile than a broad cross-section of securities. In addition, there may be periods during which the investment performance of the Fund while using a *momentum* strategy may suffer.

Securities Lending Risk: The Fund's risk in lending portfolio securities, as with other extensions of credit, consists of the possibility of loss to the Fund due to (i) the inability of the borrower to return the securities, (ii) a delay in receiving additional collateral to adequately cover any fluctuations in the value of securities on loan, (iii) a delay in recovery of the securities, or (iv) the loss of rights in the collateral should the borrower fail financially. In addition, the Fund is responsible for any loss that might result from its investment of the borrower's collateral.

Short Sale Risk: A Fund enters into a short sale by selling a security it has borrowed (typically from a broker or other institution). If the market price of a security increases after a Fund borrows the security, the Fund will suffer a (potentially unlimited) loss when it replaces the borrowed security at the higher price. In certain cases, purchasing a security to cover a short position can itself cause the price of the security to rise further, thereby exacerbating the loss. In addition, a Fund may not always be able to borrow the security at a particular time or at an acceptable price. Before a Fund replaces a borrowed security, it is required to designate on its books cash or liquid assets as collateral to cover the Fund's short position, marking the collateral to market daily. This obligation limits a Fund's investment flexibility, as well as its ability to meet redemption requests or other current obligations. A Fund may also take a short position in a derivative instrument, such as a future, forward or swap. A short position in a derivative instrument involves the risk of a theoretically unlimited increase in the value of the underlying instrument, which could cause the Fund to suffer a (potentially unlimited) loss. Short sales also involve transaction and financing costs that will reduce potential Fund gains and increase potential Fund losses.

Small-Cap Securities Risk: Investments in or exposure to the securities of companies with smaller market capitalizations involve higher risks in some respects than do investments in securities of larger companies. For example, prices of such securities are often more volatile than prices of large capitalization securities. In addition, due to thin trading in some such securities, an investment in these securities may be more illiquid (*i.e.*, harder to sell) than that of larger capitalization securities. Smaller capitalization companies also fail more often than larger companies and may have more limited management and financial resources than larger companies.

Swap Agreements Risk: Swap agreements involve the risk that the party with whom the Fund has entered into the swap will default on its obligation to pay the Fund. Additionally, certain unexpected market events or significant adverse market movements could result in the Fund not holding enough assets to be able to meet its obligations under the agreement. Such occurrences may negatively impact the Fund's ability to implement its principal investment strategies and could result in losses to the Fund.

Tax-Managed Investment Risk: The performance of a Fund may deviate from that of non-tax managed funds and may not provide as high a return before consideration of federal income tax consequences as non-tax managed funds. Each Fund's tax-sensitive investment strategy involves active management with the intent of minimizing the amount of realized gains from the sale of securities; however, market conditions may limit a Fund's ability to execute such strategy. Each Fund's ability to utilize various tax-management techniques may be curtailed or eliminated in the future by tax legislation or regulation. Although each Fund expects that a smaller portion of its *total return* will consist of taxable distributions to shareholders as compared to non-tax managed funds, there can be no assurance about the size of taxable distributions to shareholders.

Distributions of ordinary income to shareholders may be reduced by investing in lower-yielding securities and/or stocks that pay dividends that would qualify for favorable federal tax treatment provided certain holding periods or other conditions are satisfied by the Fund. Each Fund may invest a portion of its assets in stocks and other securities that generate income taxable at ordinary income rates.

Value Style Risk: Investing in or having exposure to "value" securities presents the risk that the securities may never reach what the *Adviser* believes are their full market values, either because the market fails to recognize what the *Adviser* considers to be the security's true value or because the *Adviser* misjudged that value. In addition, there may be periods during which the investment performance of the Fund while using a value strategy may suffer.

Volatility Risk: The Fund may have investments that appreciate or decrease significantly in value over short periods of time. This may cause the Fund's net asset value per share to experience significant increases or declines in value over short periods of time, however, all investments long- or short-term are subject to risk of loss.

The Funds may also be subject to certain other risks associated with their investments and investment strategies, including:

Mid-Cap Securities Risk (AQR International Multi-Style Fund and AQR TM International Multi-Style Fund): The prices of securities of mid-cap companies generally are more volatile than those of large capitalization companies and are more likely to be adversely affected than large-cap companies by changes in earnings results and investor expectations or poor economic or market conditions, including those experienced during a recession.

Portfolio Holdings Disclosure

A description of the Funds' policies and procedures with respect to the disclosure of the Funds' portfolio securities is available in the Funds' Statement of Additional Information ("SAI").

The *Adviser* may make available certain information about each Fund's portfolio prior to the public dissemination of portfolio holdings, including, but not limited to, the Fund's portfolio characteristics data; the Fund's country, currency and sector exposures; the Fund's asset class and instrument type exposures; the Fund's long/short exposures; and the Fund's performance attribution, including contributors/detractors to Fund performance, by posting such information to the Fund's website (<https://funds.aqr.com>) or upon reasonable request made to the Fund or the *Adviser*.

Change in Objective

Each Fund's investment objective is not fundamental and may be changed by the *Board of Trustees* without shareholder approval. Shareholders will normally receive at least 30 days' written notice of any change in a Fund's investment objective.

Management of the Funds

The *Trust* is organized as a Delaware statutory trust and is governed by a *Board of Trustees* that is responsible for overseeing all business activities of the *Trust*.

The Funds' *Adviser* is AQR Capital Management, LLC, a Delaware limited liability company formed in 1998. Subject to the overall authority of the *Board of Trustees*, the *Adviser* furnishes continuous investment supervision and management to the Funds' portfolios and also furnishes office space, equipment, and management personnel. The *Adviser's* address is Two Greenwich Plaza, Greenwich, CT 06830.

The *Adviser* is an investment management firm that employs a disciplined multi-asset, global research process. (AQR stands for Applied Quantitative Research). Until the launch of the AQR Funds in January 2009, the *Adviser's* investment products had been primarily provided through a limited set of collective investment vehicles and separate accounts that utilize all or a subset of the *Adviser's* investment strategies. The *Adviser* also serves as a sub-adviser to several registered investment companies. These investment products range from aggressive, high *volatility* and market-neutral alternative strategies, to low *volatility*, more traditional benchmark-driven products. The *Adviser* and its affiliates had approximately \$224 billion in assets under management as of December 31, 2017.

Investment decisions are made by the *Adviser* using a series of global asset allocation, arbitrage, and security selection models, and implemented using proprietary trading and risk-management systems. The *Adviser* believes that a systematic and disciplined process is essential to achieving long-term success in investment and risk management. The principals of the *Adviser* have been pursuing the research supporting this approach since the late 1980s, and have been implementing this approach in one form or another since 1993. The research conducted by principals and employees of the *Adviser* has been published in a variety of professional journals since 1991. Please see the *Adviser's* website (www.aqr.com) for additional information regarding the published papers written by the *Adviser's* principals and other personnel.

The *Adviser's* founding principals, Clifford S. Asness, Ph.D., M.B.A., David G. Kabiller, CFA, Robert J. Krail, and John M. Liew, Ph.D., M.B.A., and several colleagues founded the *Adviser* in January 1998. Each of the *Adviser's* founding principals was formerly at Goldman Sachs, & Co., where Messrs. Asness, Krail, and Liew comprised the senior management of the Quantitative Research Group at Goldman Sachs Asset Management (GSAM). At GSAM, the team managed both traditional (managed relative to a benchmark) and non-traditional (managed seeking absolute returns) mandates. The founding principals formed the *Adviser* to build upon the success achieved at GSAM while enabling key professionals to devote a greater portion of their time to research and investment product development. The *Adviser* manages assets for institutional investors both in the United States and globally. The *Adviser* is based in Greenwich, Connecticut and employs approximately 885 people as of the date of this prospectus.

Advisory Agreement

For serving as investment adviser, the *Adviser* is entitled to receive an advisory fee from each Fund, as reflected below and expressed as a percentage of average daily net assets.

*For the period December 14, 2016 through September 30, 2017.

The *Advisory Agreement* is governed by Delaware law. *The Advisory Agreement* is not intended to create any third-party beneficiary or otherwise confer any rights, privileges, claims or remedies upon any person other than the parties to the *Advisory Agreement* and their respective successors and permitted assigns. The *Trust*, on behalf of the Funds, enters into contractual arrangements with various parties who provide services for the Funds. Shareholders are not parties to, or intended (or "third-party") beneficiaries of, any of those contractual arrangements, and those contractual arrangements cannot be enforced by shareholders. Neither this prospectus nor the SAI is intended to give rise to any contract rights or other rights in any shareholder, other than any rights conferred explicitly by federal or state securities laws that may not be waived.

A discussion regarding the basis for the *Board of Trustees'* approval of each Fund's *Advisory Agreement* with the *Adviser* is available in the Funds' semi-annual report to shareholders for the period ended March 31, 2017.

Fee Waiver Agreement

The *Adviser* has contractually agreed to waive its management fee and/or reimburse expenses of Class I, Class N and Class R6 Shares of the Funds (the "Fee Waiver Agreement") to the extent that the total annual fund operating expenses of a class, exclusive of certain expenses, exceed set percentages as described in each Fund's current prospectuses. The Class R6 Shares of the Funds are offered in a separate prospectus. For the Class I Shares and Class N Shares, these percentages are as follows:

The Fee Waiver Agreement is effective for each Fund at least through January 28, 2019.

The Fee Waiver Agreement may only be terminated with the consent of the *Board of Trustees*, including a majority of the Trustees of the *Trust* who are not “interested persons” of the *Trust* within the meaning of the *1940 Act*, and does not extend to interest, taxes, dividends on short sales, borrowing costs, acquired fund fees and expenses, interest expense relating to short sales, expenses related to class action claims and extraordinary expenses. The *Adviser* is entitled to recapture the fees waived and/or expenses reimbursed, only to the extent that the recapture can be made during the thirty-six months following the end of the month during which the *Adviser* waived fees or reimbursed expenses. In no case will the *Adviser* recapture any amount that would cause the aggregate operating expenses of the Fund attributable to a share class during a year in which a repayment is made to exceed the lesser of (i) the applicable limits in effect at the time of the waiver and/or reimbursement, or (ii) the applicable limits in effect at the time of recapture.

For the fiscal year ended September 30, 2017, the *Adviser* recaptured fees waived and/or expenses reimbursed in an amount equal to less than 0.01% of average daily net assets of the AQR International Equity Fund.

Portfolio Managers

The *Adviser* utilizes a team-based approach to its investment management process, including model development, research, portfolio implementation, risk management and trading execution. The *Adviser's* investment decisions are based on quantitative analysis of a specified universe of securities or other assets. This quantitative analysis relies on proprietary models to generate views on securities or other assets and applies them in a disciplined and systematic process. The *Adviser's* research, portfolio implementation and trading teams supervise the day-to-day execution of these models and continuously research ways to enhance their efficiency. Senior portfolio managers oversee this process while junior portfolio managers and portfolio implementation specialists provide appropriate oversight of the day to day details of each Fund's portfolio.

Each of the portfolio managers listed below include senior members of the applicable portfolio management team that oversee the *Adviser's* investment management process for one or more of the investment strategies employed by the applicable Fund.

AQR Emerging Relaxed Constraint Equity Fund	Hoon Kim, Ph.D., M.B.A., CFA

* Each of Messrs. Asness, Liew, Israel and Kurbanov served as portfolio managers of (i) the privately offered fund which was reorganized into the AQR Global Equity Fund from June 2006, the commencement of operations, through December 31, 2009, the date the privately offered fund was reorganized into the AQR Global Equity Fund; and (ii) the privately offered fund which was reorganized into the AQR International Equity Fund from July 2004, the commencement of operations, through August 28, 2009, the date the privately offered fund was reorganized into the AQR International Equity Fund.

Information regarding the portfolio managers of each Fund is set forth below. Further information regarding the portfolio managers, including other accounts managed, compensation, ownership of Fund shares, and possible conflicts of interest, is available in the Funds' SAI.

Clifford S. Asness, Ph.D., M.B.A., is the Managing and Founding Principal of the *Adviser*. Dr. Asness cofounded the *Adviser* in 1998 and serves as its chief investment officer. He earned a B.S. in economics from the Wharton School and a B.S. in engineering from the Moore School of Electrical Engineering at the University of Pennsylvania, as well as an M.B.A. and a Ph.D. in finance from the University of Chicago.

John M. Liew, Ph.D., M.B.A., is a Founding Principal of the *Adviser*. Dr. Liew cofounded the *Adviser* in 1998 and heads its Global Asset Allocation team, overseeing the research, portfolio management and trading associated with that strategy. Dr. Liew earned a B.A. in economics, an M.B.A. and a Ph.D. in finance from the University of Chicago.

Michele L. Aghassi, Ph.D., is a Principal of the *Adviser*. Dr. Aghassi joined the *Adviser* in 2005 and is co-head of research for its Global Stock Selection group, overseeing research and portfolio management. Dr. Aghassi earned a B.Sc. in applied mathematics from Brown University and a Ph.D. in operations research from the Massachusetts Institute of Technology.

Andrea Frazzini, Ph.D., M.S., is a Principal of the *Adviser*. Dr. Frazzini joined the *Adviser* in 2008 and develops quantitative models for its Global Stock Selection team. He earned a B.S. in economics from the University of Rome III, an M.S. in economics from the London School of Economics and a Ph.D. in economics from Yale University.

Jacques A. Friedman, M.S., is a Principal of the *Adviser*. Mr. Friedman joined the *Adviser* at its inception in 1998 and heads its Global Stock Selection team, overseeing research and portfolio management. He earned a B.S. in applied mathematics from Brown University and an M.S. in applied mathematics from the University of Washington.

Ronen Israel, M.A., is a Principal of the *Adviser*. Mr. Israel joined the *Adviser* in 1999 and heads its Global Alternative Premia group, focusing on portfolio management and research. Mr. Israel earned a B.S. in economics and a B.A.S. in biomedical science from the University of Pennsylvania, and an M.A. in mathematics from Columbia University.

Michael Katz, Ph.D., A.M., is a Principal of the *Adviser*. Dr. Katz joined the *Adviser* in 2007 and oversees research and portfolio management for macro, fixed-income and inflation-related strategies. He earned a B.A. in economics and a B.A. in Middle East history, both with honors, at Tel Aviv University, and an A.M. and a Ph.D., both in economics, from Harvard University.

Hoon Kim, Ph.D., M.B.A., CFA, is a Principal of the *Adviser*. Dr. Kim joined the *Adviser* in 2005 and develops quantitative models and oversees portfolio management for its Global Stock Selection team. Dr. Kim earned a B.A. in business administration from Yonsei University in South Korea and an M.B.A. and Ph.D. in business and accounting from Carnegie Mellon University. He is a CPA (in Korea) and a CFA charterholder.

Oktay Kurbanov, M.B.A., is a Principal of the *Adviser*. Mr. Kurbanov joined the *Adviser* at its inception in 1998 and runs the portfolio management team within the Global Asset Allocation group. He earned a B.S. in physics and mathematics from the University of Michigan, and an M.B.A. from the Stern School of Business at New York University.

From time to time, a manager, analyst, or other employee of the *Adviser* or any of their affiliates may express views regarding a particular asset class, company, security, industry, or market sector. The views expressed by any such person are the views of only that individual as of the time expressed and do not necessarily represent the views of the *Adviser* or any other person within the *Adviser's* organization. Any such views are subject to change at any time based upon market or other conditions and the *Adviser* disclaims any responsibility to update such views. These views may not be relied on as investment advice and, because investment decisions for a Fund are based on numerous factors, may not be relied on as an indication of trading intent on behalf of a Fund.

The *Adviser* has developed the AQR Momentum Index, the AQR Small Cap Momentum Index and the AQR International Momentum Index (collectively, the “AQR Momentum Indices”), each of which has a methodology similar to that of the AQR Large Cap Momentum Style Fund and the AQR TM Large Cap Momentum Style Fund; the AQR Small Cap Momentum Style Fund and the AQR TM Small Cap Momentum Style Fund; and the AQR International Momentum Style Fund and the AQR TM International Momentum Style Fund, respectively. The AQR Momentum Index is a capitalization-weighted index designed to measure the performance of large- and mid-cap U.S. stocks with positive *momentum*. The AQR Small Cap Momentum Index is a capitalization-weighted index designed to measure the performance of small-cap U.S. stocks with positive *momentum* and the AQR International Momentum Index is a capitalization-weighted index designed to measure the performance of stocks with positive *momentum* in developed markets outside of the U.S. You cannot invest directly in the AQR Momentum Indices. For details regarding the AQR Momentum Indices, please see www.aqrindex.com.

Performance of Related Funds and Accounts

As of the date of this prospectus, the *Adviser* manages certain other investment funds or separately managed accounts (each, an “Account” and collectively referred to herein as the “Accounts”) with investment objectives, policies and strategies substantially similar to those of the AQR Large Cap Relaxed Constraint Equity Fund, AQR Small Cap Relaxed Constraint Equity Fund, AQR International Relaxed Constraint Equity Fund and AQR Emerging Relaxed Constraint Equity Fund, as applicable, each of which Fund has less than a three year operating history. The individuals responsible for the management of each Account are the same individuals responsible for the management of the applicable Fund. Performance is only included in this section of the Prospectus when there is at least one Account that has an inception date prior to the most recent calendar year end, coinciding with disclosure of the Fund’s performance, which must be shown as of the most recent calendar year end. *The performance of the Accounts does not represent the past performance of the Fund and you should not consider the past performance of the Accounts as indicative of the future performance of the Fund.*

Composite Performance of Accounts Related to AQR Large Cap Relaxed Constraint Equity Fund

The table below shows the historical performance of the *Adviser’s* composite that contains all Accounts with investment objectives, policies and strategies substantially similar to those of the AQR Large Cap Relaxed Constraint Equity Fund that have inception dates prior to the most recent calendar year end (the “RC Large Cap Composite” or the “Composite”). The data is provided to illustrate the past performance of the *Adviser* in managing Accounts as measured against an appropriate index, and does not represent the performance of the Fund. The performance of the Fund may be better or worse than the performance of the Composite due to, among other things, differences in portfolio holdings, sales charges, expenses, asset sizes and cash flows. In addition, at least one of the Accounts comprising the Composite is not subject to the diversification requirements, specific tax restrictions and investment limitations imposed on the Fund by the *1940 Act* and Subchapter M of the *Code*. Consequently, the performance results for the Composite expressed below could have been adversely affected if the applicable Account or Accounts had been regulated as investment companies under the federal securities and tax laws.

The manner in which the performance was calculated for the Composite differs from that of registered *mutual funds* such as the Fund. The Composite performance data was calculated in compliance with the Global Investment Performance Standards (GIPS). The performance results are presented both net of fees and gross of fees, and in USD, from year to year and the performance is compared to a market index over various periods of time. Gross of fee returns are calculated (i) gross of investment advisory fees (including performance-based fees); (ii) gross of administrative expenses; (iii) net of all withholding taxes on foreign dividends; and (iv) net of trading expenses. Administrative expenses are defined for GIPS purposes as all fees other than trading transaction costs and investment advisory fees and include custody fees, accounting fees, auditing fees, consulting fees, legal fees, and other related fees. Net of fee returns are calculated net of the total annual fund operating fees and expenses after fee waivers and/or expense reimbursements of the Class N Shares of the AQR Large Cap Relaxed Constraint Equity Fund reflected in the Fund’s fee table. Class N Shares of the Fund bear the highest annual fund operating fees and expenses after fee waivers and/or expense reimbursements of any share class of the Fund. As of the date of this prospectus, the fee table of the Class N Shares of the AQR Large Cap Relaxed Constraint Equity Fund reflects total annual fund operating fees and expenses after fee waivers and/or expense reimbursements of 1.68%. The net of fee Composite performance shown below is not higher than it would have been if such net of fee composite performance was calculated in compliance with GIPS standards.

GIPS

The following disclosure regarding GIPS is applicable only with respect to Composite performance provided in this section entitled “Performance of Related Funds and Accounts” and does not apply to Fund performance shown in the “Fund Summary—Performance Information” sections of this prospectus.

The *Adviser* claims compliance with the GIPS. For GIPS purposes, the *Adviser* defines the “Firm” as entities controlled by or under common control with the *Adviser* (including voting power). The Firm is comprised of the *Adviser* and CNH Partners, LLC. The Firm links monthly returns geometrically to produce an accurate time-weighted rate of return. Composite returns are asset-weighted. Additional information regarding the Firm's policies on fees and the calculation of investment performance is available upon request. Composite returns in the table above are calculated in compliance with GIPS standards on a trade date basis, and include accrued income and capital gains. Monthly composite returns are asset weighted based on the constituents' month-beginning NAV.

Investing With the AQR Funds

Each Fund offers Class I, Class N and Class R6 Shares. Each class of a Fund's shares has a pro rata interest in the Fund's investment portfolio, but differs as to expenses, distribution arrangements and the types of investors who may be eligible to invest in the share class. This prospectus describes the Class I Shares and Class N Shares of the Funds. The Class R6 Shares of the Funds are offered in a separate prospectus. Call 1-866-290-2688 to obtain more information concerning the Funds' Class R6 Shares, including the prospectus for the Class R6 Shares.

Non-U.S. residents are not permitted to invest in any Fund without the prior consent of the Fund. Prior to investing, assuming such investment is approved by the Fund, non-U.S. residents should consult a qualified tax and/or legal adviser about whether purchasing shares of a Fund is a suitable investment given legal and tax ramifications.

The Funds reserve the right to refuse any request to purchase shares.

ELIGIBILITY TO BUY CLASS I SHARES AND CLASS N SHARES

INVESTMENT MINIMUMS

Each Fund's Class I Shares and Class N Shares are offered to investors subject to the minimums specified below.

The minimum initial account size is \$5,000,000 for Class I Shares and \$1,000,000 for Class N Shares. This minimum requirement may be modified or reduced with respect to certain eligibility groups as indicated in the following table:

Eligibility Group	Minimum Investment	
	Class I	Class N
Institutional investors such as qualified retirement plans	\$100,000*	None
Fee-based and discretionary accounts and programs offered by certain financial intermediaries, such as registered investment advisers, broker-dealers, bank trust departments, wrap fee programs and unified managed accounts	\$100,000*	None
Investors who are not eligible for a reduced minimum	\$5,000,000	\$1,000,000

* There is no minimum investment requirement for this eligibility group with respect to exchanges into another AQR Multi-Style Fund or AQR Momentum Style Fund for investors that owned Class L Shares of an AQR Multi-Style Fund or an AQR Momentum Style Fund prior to April 1, 2015 and who are seeking to exchange out of the AQR Multi-Style Fund or AQR Momentum Style Fund in which they previously held Class L Shares.

Investors or financial advisors may aggregate accounts for purposes of determining whether the above minimum requirements have been met. Investors or financial advisors may also enter into a letter of intent indicating that they intend to meet the minimum investment requirements within an 18-month period.

There is no minimum initial account size in Class I Shares and Class N Shares for: (i) investors that owned Class I Shares or Class N Shares prior to October 31, 2010 or Class L Shares prior to August 11, 2010; (ii) tax-exempt retirement plans of the *Adviser* and its affiliates and rollover accounts from those plans; (iii) employees of the *Adviser* and affiliates, trustees and officers of the *Trust* and members of their immediate families; and (iv) investment professionals, employees of broker-dealers or other financial intermediaries, and their immediate family members.

Some financial intermediaries may impose different or additional eligibility and minimum investment requirements. The Funds have the discretion to further modify, waive or reduce the above minimum investment requirements for Class I Shares and Class N Shares.

There is no minimum subsequent investment amount for Class I Shares or Class N Shares.

The Funds reserve the right to refuse any request to purchase shares.

TYPES OF ACCOUNTS—CLASS I SHARES AND CLASS N SHARES

You may set up your account in any of the following ways:

Individual or Joint Ownership. Individual accounts are owned by one person. Joint accounts can have two or more owners, and provide for rights of survivorship.

Gift or Transfer to a Minor (UGMA, UTMA). These gift or transfer accounts let you give money to a minor for any purpose. The gift is irrevocable and the minor gains control of the account once he/she reaches the age of majority. Your application should include the minor's social security number.

Trust for Established Employee Benefit or Profit-Sharing Plan. The trust or plan must be established before you can open an account and you must include the date of establishment of the trust or plan on your application.

Business or Organization. You may invest money on behalf of a corporation, association, partnership or similar institution. You should include a certified resolution with your application that indicates which officers are authorized to act on behalf of the entity.

Retirement or Education. A qualified retirement account enables you to defer taxes on investment income and capital gains. Your contributions may be tax-deductible. For detailed information on the tax advantages and consequences of investing in individual retirement accounts (IRAs) and retirement plan accounts, please consult your tax advisor. The types of IRAs available to you are: Traditional IRA, Roth IRA, Rollover IRA, SIMPLE IRA, SEP IRA and Coverdell Education Savings Account (formerly called an Education IRA). The IRA and Coverdell Education Savings Account custodian charges an annual maintenance fee (currently \$15.00) per IRA or ESA holder.

The Funds may be used as an investment in other kinds of retirement plans, including, but not limited to, Keogh plans maintained by self-employed individuals or owner-employees, traditional pension plans, corporate profit-sharing and money purchase pension plans, section 403(b)(7) custodial tax-deferred annuity plans, other plans maintained by tax-exempt organizations, cash balance plans and any and all other types of retirement plans. All of these accounts need to be established by the plan's trustee and the plan's trustee should contact the Funds regarding the establishment of an investment relationship.

SHARE PRICE

Net Asset Value. The price you pay for a share of a Fund, and the price you receive upon selling or redeeming a share of that Fund, is called the Fund's NAV per share. Each Fund's NAV per share is generally calculated as of the scheduled close of trading on the NYSE (normally 4:00 p.m. Eastern time) on each *Business Day*. Each Fund determines an NAV per share for each class of its shares. The price at which a purchase or redemption order is effected is based upon the next NAV calculation after the purchase or redemption order is received by the Fund (or its agent) in proper form. If there is an unscheduled NYSE closure prior to 4:00 p.m. Eastern time, transaction deadlines and NAV calculations may occur at 4:00 p.m. Eastern time or at an earlier time, if the particular closure directly affects the NYSE but other exchanges remain open for trading. Each Fund reserves the right to change the time its NAV is calculated if otherwise permitted by the 1940 Act or pursuant to statements from the SEC or its staff. The NAV per share of a class of a Fund is computed by dividing the total current value of the assets of the Fund attributable to a class, less class liabilities, by the total number of shares of that class of the Fund outstanding at the time the computation is made.

Foreign markets may be open at different times and on different days than the NYSE, meaning that the value of the Funds' shares may change on days when shareholders are not able to buy or sell their shares. Foreign currencies, securities and other assets and liabilities denominated in foreign currencies are translated into U.S. dollars at the exchange rates generally determined as of 4:00 p.m. Eastern time.

For purposes of calculating the NAV, portfolio securities and other financial derivative instruments are valued on each *Business Day* using valuation methods as adopted by the *Board of Trustees*. The *Board of Trustees* has delegated responsibility for applying approved valuation policies to the *Adviser*, subject to oversight by the *Board of Trustees*. The *Adviser* has established a Valuation Committee (the "VC") whose function is to administer, implement and oversee the continual appropriateness of valuation methods applied and the determination of adjustments to the fair valuation of portfolio securities and other financial derivative instruments in good faith after consideration of market factor changes and events affecting issuers.

Where market quotes are readily available, fair value is generally determined on the basis of official closing prices or the last reported sales prices, or if no sales are reported, based on quotes obtained from pricing services or established market makers. Where market quotations are not readily available, or if an available market quotation is determined not to represent fair value, securities or financial derivatives are valued at fair value, as determined in good faith by the VC in accordance with the valuation procedures approved by the *Board of Trustees*. Using fair value to price a security may require subjective determinations about the value of a security that could result in a value that is different from a security's most recent closing price and from the prices used by other *mutual funds* to calculate their net assets. It is possible the estimated values may differ significantly from the values which would have been used had a ready market for the investments existed. These differences could be material.

Equity securities, including securities sold short, rights, exchange-traded option contracts, warrants, ETFs and closed-end investment companies, are valued at the last quoted sales prices or official closing prices taken from the primary market in which each security trades. Investments in open-end investment companies are valued at such investment company's current day closing net asset value per share. An equity for which no sales are reported, as in the case of a security that is traded in the over-the-counter ("OTC") market or a less liquid listed equity, is valued at its last bid price (in the case of short sales, at the ask price).

Fixed income securities (other than certain short-term investments maturing in 60 days or less) are normally valued based on prices received from pricing services or brokers and dealers using data reflecting the earlier closing of the principal market for such instruments. The pricing services use multiple valuation techniques to determine the valuation of fixed income instruments. In instances where sufficient market activity exists, the pricing services may utilize a market based approach through which trades or quotes from market makers are used to determine the valuation of these instruments. In instances where sufficient market activity may not exist, the pricing services also utilize proprietary valuation models which may consider market transactions in comparable securities and the various relationships between securities in determining fair value and/or market characteristics in order to estimate the relevant cash flows, which are then discounted to calculate the fair values. Certain fixed income securities purchased on a delayed-delivery basis are marked to market daily until settlement at the forward settlement date.

Equities traded outside of the Western Hemisphere are fair valued daily based on the application of a fair value factor (unless the *Adviser* determines that use of another valuation methodology is appropriate). The Funds apply daily fair value factors, furnished by an independent pricing service, to account for the market movement between the close of the foreign market and the close of the *NYSE*. The pricing service uses statistical analysis and quantitative models to adjust local market prices using factors such as subsequent movement and changes in the prices of indices, American Depositary Receipts, futures contracts and exchange rates in other markets in determining fair value as of the time a Fund calculates its *NAV*.

Futures and option contracts that are listed on national exchanges and are freely transferable are valued at fair value based on their last sales price on the date of determination on the exchange that constitutes their principal market or, if no sales occurred on such date, at the bid price on such exchange at the close of business on such date. Centrally cleared swaps listed or traded on a multilateral trade facility platform, such as a registered exchange, are valued on a daily basis using quotations provided by an independent pricing service.

OTC derivatives, including forward contracts and swap contracts, are fair valued by the Funds on a daily basis using observable inputs, such as quotations provided by an independent pricing service, the counterparty, dealers or brokers, whenever available and considered reliable. The value of each *total return* swap contract and *total return* basket swap contract is derived from a combination of (i) the net value of the underlying positions, which are valued daily using the last sale or closing price on the principal exchange on which the securities are traded; (ii) financing costs; (iii) the value of dividends or accrued interest; (iv) cash balances within the swap; and (v) other factors, as applicable.

The U.S. Dollar value of forward foreign currency exchange contracts is determined using current forward currency exchange rates supplied by an independent pricing service.

Credit default swap contracts and interest rate swap contracts are marked to market daily based on quotations as provided by an independent pricing service. The independent pricing services aggregate valuation information from various market participants to create a single reference value for each credit default swap contract and interest rate swap contract.

The Funds value the repurchase agreements and reverse repurchase agreements they have entered based on the respective contract amounts, which approximate fair value. As such, repurchase agreements are carried at the amount of cash paid plus accrued interest receivable (or interest payable in periods of increased demand for collateral), and reverse repurchase agreements are carried at the amount of cash received plus accrued interest payable (or interest receivable in periods of increased demand for collateral).

You may obtain information as to a Fund's current *NAV* per share by visiting the Funds' website at <https://funds.aqr.com> or by calling (866) 290-2688.

GENERAL PURCHASING POLICIES

- You may purchase a Fund's Class I Shares and Class N Shares at the *NAV* per share next determined following receipt of your purchase order in *good order* by a Fund or an authorized financial intermediary or other agent of a Fund. A purchase, exchange or redemption order is in "*good order*" when a Fund, its *Distributor* and/or its agent, receives all required information, including properly completed and signed documents. Financial intermediaries authorized to accept purchase orders on behalf of a Fund are responsible for timely transmitting those orders to the Fund.
- You may purchase a Fund's Class I Shares and Class N Shares directly from the Fund or through certain financial intermediaries (and other intermediaries these firms may designate) without the imposition of any sales charges. See "How to Buy Class I Shares and Class N Shares" below.
- Once a Fund accepts your purchase order, you may not cancel or revoke it; however, you may redeem the shares. A Fund is deemed to have received a purchase or redemption order when an authorized financial intermediary (or its authorized designee) receives the order. A Fund may withhold redemption proceeds until it is reasonably satisfied it has received your payment. This confirmation process may take up to 10 days.
- Each Fund reserves the right to cancel a purchase if payment, including by check or electronic funds transfer, does not clear your bank or is not received by settlement date. A Fund may charge a fee for insufficient funds and you may be responsible for any fees imposed by your bank and any losses that the Fund may incur as a result of the canceled purchase. In addition, each Fund reserves the right to cancel any purchase or exchange order it receives if the *Trust* believes that it is in the best interest of the Fund's shareholders to do so.
- Financial intermediaries purchasing a Fund's shares on behalf of its customers must pay for such shares by the time designated by the agreement with the financial intermediary, which is generally on the first *Business Day* following the receipt of the order. When authorized by the *Trust*, certain financial intermediaries may be permitted to delay payment for purchases, but in no case later than the third *Business Day* following the receipt of the order. If payment is not received by this time, the order may be canceled. The financial intermediary or the underlying customer is responsible for any costs or losses incurred if payment is delayed or not received.

GENERAL REDEMPTION POLICIES

- You may redeem a Fund's Class I Shares and Class N Shares at the NAV per share next-determined following receipt of your redemption order in *good order* by the Fund or an authorized financial intermediary or other agent of the Fund.
- The Funds cannot accept a redemption request that specifies a particular redemption date or price.
- Once a Fund accepts your redemption order, you may not cancel or revoke it.

Timing of Redemption Proceeds. The Funds generally will transmit redemption proceeds on the next *Business Day* after receipt of your redemption request regardless of whether payment of redemption proceeds is to be made by check, wire, or Automatic Clearing House ("ACH") transfer as described below under the heading "Payment of Redemption Proceeds." However, the Funds reserve the right to delay payment for up to seven calendar days. If you recently made a purchase, the Funds may withhold redemption proceeds until they are reasonably satisfied that they have received your payment. This confirmation process may take up to 10 days. The Funds may temporarily stop redeeming shares or delay payment of redemption proceeds when the NYSE is closed or trading on the NYSE is restricted, when an emergency exists and the Funds cannot sell shares or accurately determine the value of assets, or if the SEC orders the Funds to suspend redemptions or delay payment of redemption proceeds.

The Funds reserve the right at any time without prior notice to suspend, limit, modify or terminate any privilege, including the telephone exchange privilege, or its use in any manner by any person or class.

Excessive and Short-Term Trading. The Funds are intended for long-term investment purposes, and thus purchases, redemptions and exchanges of Fund shares should be made with a view toward long-term investment objectives. Excessive trading, short-term trading and other abusive trading activities may be detrimental to a Fund and its long-term shareholders by disrupting portfolio management strategies, increasing brokerage and administrative costs, harming Fund performance and diluting the value of shares. Such trading may also require a Fund to sell securities to meet redemptions, which could cause taxable events that impact shareholders. If your investment horizon is not long-term, then you should not invest in the Funds.

The *Board of Trustees* has adopted policies and procedures that seek to discourage and deter excessive or short-term trading activities. These policies and procedures include the use of fair value pricing of international securities and periodic review of shareholder trading activity and provide each Fund with the ability to suspend or terminate telephone or internet redemption privileges and any exchange privileges. In addition, the Funds reserve the right to refuse any purchase or exchange request that, in the view of the *Adviser*, could adversely affect any Fund or its operations, including any purchase or exchange request from any individual, group or account that is likely to engage in excessive short-term trading, or any order that may be viewed as market-timing activity. With respect to the review of shareholder trading activity, the Funds have set and utilize a set of criteria believed to serve as a preliminary indicator of market-timing and/or excessive short-term trading activity (referred to herein, as "Shareholder Criteria") and review each account meeting this criteria. If, after review of these accounts, the transaction history of an account appears to indicate excessive short-term trading or market timing, the Fund will provide notice to the shareholder or the applicable intermediary to cease such trading activities and, when appropriate, restrict or prohibit further purchases or exchanges of shares for the account. In addition, if the transaction history of an omnibus account appears to indicate the possibility of excessive trading, short-term trading or market timing, the Fund or the *Adviser* may request underlying shareholder information from the financial intermediary associated with the omnibus account pursuant to Rule 22c-2 under the *1940 Act*. Upon receipt of the underlying shareholder information from the financial intermediary, the Fund or the *Adviser* will review any of the underlying shareholder accounts meeting the Shareholder Criteria and if the transaction history of an underlying shareholder appears to indicate excessive trading, short-term trading or market timing, the *Adviser* may instruct the financial intermediary to restrict or prohibit further purchases or exchanges of Fund shares by the underlying shareholder.

Despite the Funds' efforts to detect and prevent abusive trading activity, there can be no assurance that the Funds will be able to identify all of those who may engage in abusive trading and curtail their activity in every instance. In particular, it may be difficult to curtail such activity in certain omnibus accounts and other accounts traded through intermediaries, despite arrangements the Funds have entered into with the intermediaries to provide access to account level trading information. Omnibus accounts are comprised of multiple investors whose purchases, exchanges and redemptions are aggregated before being submitted to the Funds.

OTHER POLICIES

No Certificates. The issuance of shares is recorded electronically on the books of the Funds. You will receive a confirmation of, or account statement reflecting, each new transaction in your account, which will also show the total number of shares of each Fund you own. You can rely on these statements in lieu of certificates. The Funds do not issue certificates representing shares of the Funds.

Frozen Accounts. The Funds may be required to "freeze" your account if there appears to be suspicious activity or if account information matches information on a government list of known terrorists or other suspicious persons.

Small Account Policy. Each Fund reserves the right, upon 60 days' written notice to:

- (A) redeem, at NAV, the shares of any shareholder whose:
- a) with respect to Class I Shares, account(s) across all AQR Funds has a value of less than \$1,000 in the aggregate in Class I Shares, other than as a result of a decline in the net asset value per share; or
 - b) with respect to Class N Shares, account with a Fund has a value of less than \$1,000 in Class N Shares, other than as a result of a decline in the net asset value per share; or
- (B) permit an exchange for shares of another class of the same Fund if the shareholder requests an exchange in lieu of redemption in accordance with subparagraph (A) above.

This policy will not be implemented where the Fund has previously waived the minimum investment requirement for that shareholder.

Before a Fund redeems such shares and sends the proceeds to the shareholder, it will notify the shareholder that the value of the shares in the account is less than the minimum amount and will allow the shareholder 60 days to make an additional investment in an amount that will increase the value of the account(s) to the minimum amount specified above before the redemption is processed. As a sale of your Fund shares, this redemption may have tax consequences.

How to Buy Class I Shares and Class N Shares

HOW TO BUY SHARES

You can open an account and make an initial purchase of shares of the Funds directly from the Funds or through certain financial intermediaries that have entered into appropriate arrangements with the Funds' *Distributor*, ALPS Distributors, Inc.

To open an account and make an initial purchase directly with the Funds, you can mail a check or other negotiable bank draft (payable to AQR Funds) in the applicable minimum amount, along with a completed and signed Account Application, to AQR Funds, P.O. Box 2248, Denver, CO 80201-2248. You may also fax your completed Account Application to 1-866-205-1499. To obtain an Account Application, call (866) 290-2688 or download one from <https://funds.aqr.com>. A completed Account Application must include your valid taxpayer identification number. You may be subject to penalties if you falsify information with respect to your tax identification number.

Payment must be in U.S. dollars by a check drawn on a bank in the United States, wire transfer or electronic transfer. The Funds will not accept cash, traveler's checks, starter checks, money orders, third party checks (except for properly endorsed IRA rollover checks), checks drawn on foreign banks or checks issued by credit card companies or Internet-based companies. Shares purchased by checks that are returned will be canceled and you will be liable for any losses or fees incurred by the Fund or its agents, including bank handling charges for returned checks.

You may also open an account or make an initial purchase directly with the Funds by wire transfer from your bank account to your Fund account along with mailing or faxing your completed Account Application as described above. To place a purchase by wire, please call (866) 290-2688 for more information.

After you have opened an account, you can make subsequent purchases of shares of the Funds through your financial intermediary or directly from the Funds, depending on where your account is established. To purchase additional shares directly from the Funds, you may do so by mail, wire or fax following the instructions described above.

Depending upon the terms of your account, you may pay account fees for services provided in connection with your investment in a Fund. The Funds have authorized certain financial intermediaries (such as broker-dealers, investment advisors or financial institutions) to accept purchase and redemption orders on behalf of the Funds. These financial intermediaries may charge their customers a transaction or service fee. Your financial intermediary can provide you with information about these services and charges. You should read this prospectus in conjunction with any such information you receive.

The Funds do not consider the U.S. Postal Service or other independent delivery services to be their agents. Therefore, deposit in the mail or with such services, or receipt at the Funds' post office box, of purchase orders, redemption requests or exchange requests does not constitute receipt by the Funds.

AUTOMATIC INVESTMENT PLAN

The Funds offer an Automatic Investment Plan for current and prospective investors in which you may make monthly investments in one or more of the Funds. Sums for investment will be automatically withdrawn from your checking or savings account on the day you specify. If you do not specify a day, the transaction will occur on the 20th of each month or the next *Business Day* if the 20th is not a *Business Day*. Please call (866) 290-2688 if you would like more information.

CUSTOMER IDENTIFICATION PROGRAM

To help the government fight the funding of terrorism and money laundering activities, federal law requires all financial institutions to obtain, verify and record information that identifies each person that opens a new account, and to determine whether such person's name appears on government lists of known or suspected terrorists and terrorist organizations.

As a result, the Funds must obtain the following information for each person that opens a new account:

- Name;
- Date of birth (for individuals);
- Residential or business street address (although post office boxes are still permitted for mailing); and
- Social Security number, taxpayer identification number, or other identifying number.

You may also be asked for a copy of your driver's license, passport or other identifying document in order to verify your identity. In addition, it may be necessary to verify your identity by cross-referencing your identification information with a consumer report or other electronic database. Additional information may be required to open accounts for corporations and other entities.

Federal law prohibits the Funds and other financial institutions from opening a new account unless they receive the minimum identifying information listed above. After an account is opened, the Funds may restrict your ability to purchase additional shares until your identity is verified. The Funds may close your account or take other appropriate action if they are unable to verify your identity within a reasonable time. If your account is closed for this reason, your shares will be redeemed at the *NAV* next calculated after the account is closed.

The Funds and their agents will not be responsible for any loss in an investor's account resulting from the investor's delay in providing all required identifying information or from closing an account and redeeming an investor's shares when an investor's identity is not verified.

eDELIVERY

eDelivery allows you to receive your quarterly account statements, transaction confirmations and other important information concerning your investment in the Funds online. Select this option on your Account Application to receive email notifications when quarterly statements and confirmations are available for you to view via secure online access. You will also receive emails whenever a new prospectus, semi-annual or annual fund report is available. To establish eDelivery, call (866) 290-2688 or visit <https://funds.aqr.com>.

How to Redeem Class I Shares and Class N Shares

You may normally redeem your shares on any *Business Day*, i.e., any day during which the *NYSE* is open for trading. Redemptions of Class I Shares and Class N Shares are priced at the *NAV* per share next determined after receipt of a redemption request in *good order* by the Funds' *Distributor*, the Funds or an authorized agent of the Funds. A financial intermediary may charge its customers a transaction or service fee in connection with redemptions, and will have its own procedures for arranging for redemptions of the Funds' shares. If you have purchased your Fund shares through a financial intermediary, consult your intermediary for more information.

None of the Funds, the *Adviser*, the *Distributor* and the *Transfer Agent* of the Funds, nor any of their affiliates or agents will be liable for any loss, expense or cost when acting upon any oral, wired or electronically transmitted instructions or inquiries believed by them to be genuine.

While precautions will be taken, as more fully described below, you bear the risk of any loss as the result of unauthorized telephone redemptions or exchanges believed to be genuine, subject to applicable law. The Funds will employ reasonable procedures to confirm that instructions communicated are genuine. These procedures include recording phone conversations, sending confirmations to shareholders within 72 hours of the telephone transaction, verifying the account name and sending redemption proceeds only to the address of record or to a previously authorized bank account.

BY TELEPHONE

You may redeem your shares by telephone if you choose that option on your Account Application. If you did not originally select the telephone option, you must provide written instructions to the Funds in order to add this option. The maximum amount that may be redeemed by telephone at any one time is \$50,000. You may have the proceeds mailed to your address of record or wired to a bank account previously designated on the Account Application.

BY MAIL

To redeem by mail, you must send a written request for redemption to the Funds, AQR Funds, P.O. Box 2248, Denver, CO 80201-2248. The Funds' *Transfer Agent* will require a Medallion Signature Guarantee. A Medallion Signature Guarantee may be obtained from a domestic bank or trust company, broker, dealer, clearing agency, savings association, or other financial institution that is participating in a medallion program recognized by the Securities Transfer Association. Signature guarantees from financial institutions that are not participating in one of these programs are not accepted as Medallion Signature Guarantees. The Medallion Signature Guarantee requirement will be waived if all of the following conditions apply: (1) the redemption check is payable to the shareholder(s) of record; (2) the redemption check is mailed to the shareholder(s) at the address of record; (3) an application is on file with the *Transfer Agent*; and (4) the proceeds of the redemption are \$50,000 or less. The *Transfer Agent* cannot send an overnight package to a post office box.

BY FAX

You may redeem your shares by faxing a written request for redemption to 1-866-205-1499. You may have the proceeds mailed to your address of record or wired to a bank account previously designated on the Account Application.

BY SYSTEMATIC WITHDRAWAL

You may elect to have monthly electronic transfers (\$250 minimum) made to your bank account from your Funds account. Your Funds account must have a minimum balance of \$10,000 and automatically have all dividends and capital gains reinvested. The transfer will be made on the *Business Day* you specify (or the next *Business Day*) to your designated account or a check will be mailed to your address of record. If you do not specify a day, the transfer will be made on the 20th day of each month or the next *Business Day* if the 20th is not a *Business Day*.

RETIREMENT ACCOUNTS

To redeem shares from an IRA, Roth IRA, SIMPLE IRA, SEP IRA, 403(b) or other retirement account, you must mail a completed and signed Distribution Form to the Funds. You may not redeem shares of an IRA, Roth IRA, SIMPLE IRA, SEP IRA, 403(b) or other retirement account by telephone or via the Internet.

PAYMENTS OF REDEMPTION PROCEEDS

Redemption orders are valued at the *NAV* per share next determined after the shares are properly tendered for redemption, as described above. Payment for shares redeemed generally will be on the next *Business Day* after receipt of a valid request for redemption regardless of whether payment of redemption proceeds is to be made by check, wire, or ACH transfer. The Funds reserve the right to delay payment for up to seven calendar days. The Funds may temporarily stop redeeming shares or delay payment of redemption proceeds for more than seven calendar days when

the *NYSE* is closed or trading on the *NYSE* is restricted, when an emergency exists and the Funds cannot sell shares or accurately determine the value of assets, or if the *SEC* orders the Funds to suspend redemptions or delay payment of redemption proceeds.

At various times, a Fund may be requested to redeem shares for which it has not yet received good payment. If this is the case, the forwarding of proceeds may be delayed until payment has been collected for the purchase of the shares. The delay may last 10 days or more. The Funds intend to forward the redemption proceeds as soon as good payment for purchase orders has been received. This delay may be avoided if shares are purchased by wire transfer.

Generally, all redemptions will be in cash. The Funds typically expect to satisfy redemption requests by using holdings of cash or cash equivalents. The Funds may also determine to sell portfolio assets to meet such requests. On a less regular basis, the Funds may satisfy redemption requests by accessing a bank line of credit or using other short-term borrowings from the Funds' custodian (if permitted by the custodian). These methods may be used during both normal and stressed market conditions.

In addition to paying redemption proceeds in cash, the Funds reserve the right to pay part or all of your redemption proceeds in readily marketable securities instead of cash. The Funds are obligated to redeem shares solely in cash up to the lesser of \$250,000 or 1% of the Funds' NAV during any 90 day period for any one shareholder. Redemptions in excess of those amounts will normally be paid in cash, but may be paid wholly or partly by a distribution in kind of marketable securities. Each Fund reserves the right to pay in-kind redemptions through distributions of (i) securities comprising a pro rata portion of the Fund's securities holdings, (ii) individual securities and/or (iii) baskets of securities. If payment is made in securities, a Fund will value the securities selected in the same manner in which it computes its NAV. Brokerage costs may be incurred by a shareholder who receives securities and desires to convert them to cash. Also, the portfolio securities received may increase or decrease in value before the investor can convert them into cash. While the Funds do not expect to routinely use redemptions in kind, each Fund reserves the right to do so at the request of the shareholder, during stressed market conditions or to manage the impact of large redemptions on the Fund under normal or stressed market conditions.

By Check

You may have a check for the redemption proceeds mailed to your address of record. To change the address to which a redemption check is to be mailed, you must send a written request with a Medallion Signature Guarantee to the Funds, AQR Funds, P.O. Box 2248, Denver, CO 80201-2248.

By ACH Transfer

If your bank account is ACH active, you may have your redemption proceeds sent to your bank account via ACH transfer.

By Wire Transfer

You can arrange for the proceeds of a redemption to be sent by wire transfer to a single previously designated bank account if you have given authorization for expedited wire redemption on your Funds Account Application. This redemption option does not apply to shares held in broker "street name" accounts. If a request for a wire redemption is received by the Funds prior to the close of the *NYSE*, the shares will be redeemed that day at the next determined NAV, and the proceeds will generally be sent to the designated bank account the next *Business Day*. The bank must be a member of the Federal Reserve wire system. Delivery of the proceeds of a wire redemption request may be delayed by the Funds for up to seven days if deemed appropriate under then current market conditions. Redeeming shareholders will be notified if a delay in transmitting proceeds is anticipated. The Funds cannot be responsible for the efficiency of the Federal Reserve wire system or the shareholder's bank. You are responsible for any charges imposed by your bank. The Funds reserve the right to terminate the wire redemption privilege. Shares purchased by check may not be redeemed by wire transfer until the shares have been owned (*i.e.*, paid for) for at least 10 days. To change the name of the single bank account designated to receive wire redemption proceeds, you must send a written request with a Medallion Signature Guarantee to the Funds, AQR Funds, P.O. Box 2248, Denver, CO 80201-2248. If you elect to have the payment wired to your bank, a wire transfer fee of \$30.00 may be charged by the Funds.

The Funds do not consider the U.S. Postal Service or other independent delivery services to be their agents. Therefore, deposit in the mail or with such services, or receipt at the Funds' post office box, of purchase orders, redemption requests or exchange requests does not constitute receipt by the Funds.

How to Exchange Class I Shares and Class N Shares

You may exchange shares of a Fund for any class of shares of another Fund or any other series of the *Trust* (each, a "Series"), provided that you meet all eligibility requirements for investment in the particular class of shares. See "Investing with the AQR Funds" in this prospectus for more details. Exchanges may be made on any day during which the *NYSE* is open for trading.

Exchanges are priced at the *NAV* per share next determined after receipt of an exchange request in *good order* by the Funds' *Distributor*, the Funds or an authorized financial intermediary or other agent of the Funds. A financial intermediary may charge its customers a transaction or service fee in connection with exchanges, and will have its own procedures for arranging for exchanges of the Funds' shares. If you have purchased your Fund shares through a financial intermediary, consult your intermediary for more information.

An exchange of shares of one Fund for shares of another Fund or Series is considered a sale and generally results in a capital gain or loss for federal income tax purposes, unless you are investing through an IRA, 401(k) or other tax-advantaged account. You should talk to your tax advisor before making an exchange.

None of the Funds, the *Adviser*, the *Distributor* and the *Transfer Agent* of the Funds, nor any of their affiliates or agents will be liable for any loss, expense or cost when acting upon any oral, wired or electronically transmitted instructions or inquiries believed by them to be genuine, subject to applicable law.

While precautions will be taken, as more fully described below, you bear the risk of any loss as the result of unauthorized telephone exchanges believed to be genuine. The Funds will employ reasonable procedures to confirm that instructions communicated are genuine. These procedures include recording phone conversations, sending confirmations to shareholders within 72 hours of the telephone transaction and verifying the account name.

Always be sure to read the prospectus of the Fund or Series into which you are exchanging shares. To receive a current copy of a Fund's or Series' prospectus, please call 1-866-290-2688 or visit <https://funds.aqr.com>.

The Funds do not consider the U.S. Postal Service or other independent delivery services to be their agents. Therefore, deposit in the mail or with such services, or receipt at the Funds' post office box, of purchase orders, redemption requests or exchange requests does not constitute receipt by the Funds.

RESTRICTIONS

- If you bought shares through a financial intermediary, contact your financial intermediary to learn which Funds, Series and share classes your financial intermediary makes available to you for exchanges.
- Exchanges may be made only between accounts that have identical registrations.
- Not all Funds or Series offer all share classes.
- You will generally be required to meet the minimum investment requirement for the class of shares into which your exchange is made.
- Your exchange will also be subject to any other requirements of the Fund, Series or share class into which, or from which, you are exchanging shares, including the imposition of sales loads and/or subscription or redemption fees (if applicable).
- The exchange privilege is not intended as a vehicle for short-term trading. The Funds or Series may suspend or terminate your exchange privilege if you engage in a pattern of excessive exchanges.
- Each Fund and each Series reserve the right to cancel any purchase or exchange order it receives if the *Trust* believes that it is in the best interest of the Fund's or Series' (as applicable) shareholders to do so.

BY TELEPHONE

Contact your financial intermediary or, if you purchased your shares directly from the Funds, you may exchange your shares by telephone if you choose that option on your Account Application by calling 1-866-290-2688. If you did not originally select the telephone option, you must provide written instructions to the Funds in order to add this option.

BY MAIL

Contact your financial intermediary or, if you purchased your shares through the *Distributor*, you must send a written request for exchange to the Funds at the following address:

AQR Funds
P.O. Box 2248
Denver, CO 80201-2248

BY SYSTEMATIC EXCHANGE PLAN

You may be permitted to schedule automatic exchanges of shares of a Fund for shares of other Funds or Series available for exchange. All requirements for exchanging shares described above apply to these exchanges. In addition:

- Exchanges may be made monthly.
- Each exchange must meet the applicable investment minimums for automatic investment plans (see “How to Buy Class I Shares and Class N Shares”).

For more information, please contact your financial intermediary or the Funds.

The Funds also reserve the right to permit exchanges of shares of a Fund for shares of another class of the same Fund.

Rule 12b-1 Plan (Class N Shares)

The *Board of Trustees* has adopted a *Rule 12b-1 Plan* with respect to each Fund's Class N Shares. The *Rule 12b-1 Plan* provides that the distribution fee payable is up to 0.25% annually of the Fund's average daily net assets for Class N Shares. The *Rule 12b-1 Plan* permits a Fund to make payments for activities designed primarily to result in the sale of the Funds' Class N Shares. Because these fees are paid out of a Fund's assets on an on-going basis, over time these fees will increase the cost of your investment and may cost you more than paying other types of sales charges.

Certain Additional Payments

The Funds or the *Adviser* also may enter into agreements with certain intermediaries under which the Funds make payments to the intermediaries in recognition of the avoided transfer agency costs to the Funds associated with the intermediaries' maintenance of customer accounts or in recognition of the services provided by intermediaries through *mutual fund* platforms. Payments made out of the Funds under such agreements are generally based on either (1) a percentage of the average daily net asset value of the customer shares serviced by the intermediary, up to a set maximum, or (2) a per account fee assessed against each account serviced by such intermediary, up to a set maximum. These payments are in addition to other payments described in this prospectus such as the *Rule 12b-1 Plan*.

The *Adviser* (or an affiliate) also may make additional payments out of its own resources to certain intermediaries or their affiliates based on sales or assets attributable to the intermediary, or such other criteria agreed to by the *Adviser* in connection with the sale or distribution of a Fund's shares or the administration of shareholder accounts. The *Adviser* selects the intermediaries to which it or its affiliate makes payments. These additional payments to intermediaries, which are sometimes referred to as "revenue sharing" payments, may represent a premium over payments made by other fund families, and investment professionals may have an added incentive to sell or recommend a Fund or a share class of the Fund over others offered by competing fund families. Ask your investment professional for more information.

The *Adviser* may make other payments or allow promotional incentives to broker-dealers to the extent permitted by *SEC* and Financial Industry Regulatory Authority (FINRA) rules and by other applicable laws and regulations.

Distributions and Taxes

DISTRIBUTIONS

Each Fund distributes to its shareholders substantially all net investment income as dividends and any net capital gains realized from sales of the Fund's portfolio securities. Each of the Funds expects to declare and pay dividends annually. Net realized long-term capital gains, if any, are paid to shareholders at least annually.

All of your income dividends and capital gain distributions will be reinvested in additional shares unless you elect to have distributions paid by check. If any check from a Fund mailed to you is returned as undeliverable or is not presented for payment within six months, the *Trust* reserves the right to reinvest the check proceeds and future distributions in additional Fund shares.

TAXES

The following is a discussion of certain U.S. federal income tax considerations as they relate to distributions paid to you by a Fund and the sale or exchange of your Fund shares. It is not intended to be a full discussion of income tax laws and does not address special tax rules applicable to certain types of investors, such as tax-exempt entities, insurance companies, and financial institutions; therefore we recommend you consult your tax advisor with respect to the specific federal, state, local and foreign tax consequences of investing in a Fund. Unless otherwise noted, the tax information below assumes you are a U.S. citizen or resident.

Sales. When you redeem or otherwise dispose of Fund shares, you will generally recognize capital gain or loss in the amount of the difference between the adjusted tax basis of your shares and the redemption proceeds, assuming that you hold the shares as capital assets. Such capital or loss would be long-term if the holding period exceeds one year and short-term if the holding period is one year or less, except any loss realized on shares held for six months or less will be treated as long-term capital loss to the extent of any capital gain dividends received on such shares.

Exchanges. If you exchange your shares of a Fund for shares of another class of the same Fund, it will not be considered a taxable event and should not result in capital gain or loss. If you exchange your shares of a Fund for shares of another Fund, it will be considered a sale and purchase of shares for federal income tax purposes and may result in a capital gain or loss.

Cost Basis Reporting. Each shareholder is responsible for tax reporting and Fund share cost calculation. To facilitate your tax reporting, a Fund is required to report annually on Form 1099-B the gross proceeds of all Fund shares sold or redeemed. In addition to gross proceeds, a Fund is also required to report the cost basis of Fund shares sold or redeemed that were purchased on or after January 1, 2012. The cost basis will be calculated using the Funds' default method of average cost, unless you instruct the Fund to use a different methodology. If your account is held through a third party intermediary, you will need to contact your account representative with respect to the cost basis reporting methods available to you.

The cost basis information you receive may not include certain additional basis, holding period or other adjustments required for federal income tax purposes. Therefore you should consult with your tax advisor to properly calculate gain or loss on the sale or redemption of Fund shares.

Distributions. Distributions are subject to federal income tax and may be subject to state or local taxes. If you are a U.S. citizen residing outside the U.S., your distributions may also be taxed by the country in which you reside. Distributions from net investment income and net short-term capital gain are taxable to you as ordinary income, while distributions of long-term capital gains are taxable to you as long-term capital gains regardless of the length of time you held your Fund Shares. Fund distributions paid to you are taxable whether received in cash or reinvested in additional Fund shares, unless your Fund shares are held in an individual retirement account or other tax-deferred account. These accounts are subject to complex tax rules; therefore, it is recommended that you consult your tax advisor about their applicability to your investment.

Distributions paid from long-term capital gains are generally taxed to individuals at either 15% or 20%, depending upon whether their taxable income exceeds certain threshold amounts. Distributions that are designated as "qualified dividend income" are taxed to non-corporate shareholders at long-term capital gain rates assuming that the relevant Fund shares are held for at least 61 days during the 121-day period beginning 60 days before the Fund's ex-dividend date.

An additional 3.8% Medicare contribution tax is imposed on net investment income, including, among other items, interest, dividends, and net gain, of U.S. individuals, estates and trusts that exceeds certain threshold amounts.

Investment income earned by a Fund from sources within foreign countries may be subject to foreign income taxes withheld at the source. If a Fund pays nonrefundable taxes to foreign countries during the year, the taxes will be deductible against the Fund's taxable income. However, if a Fund qualifies for and makes a special election, such foreign taxes paid by the Fund will be included as an amount deemed distributed to you as taxable income, and you may be able to claim an offsetting credit or deduction on your tax return for your share of these foreign taxes.

Purchasing a Fund's shares in a taxable account shortly before a distribution is paid by the Fund is sometimes called "buying into a distribution." You will be fully taxed on the distribution even though the distribution reflects a return of a portion of your recent investment.

Backup Withholding. You must furnish to the Funds your social security or other tax identification number to avoid federal income tax backup withholding on dividends, distributions and redemption proceeds. The Fund is required to withhold a portion, based on the applicable backup withholding rate, of your taxable distributions and redemption proceeds if you do not provide your correct taxpayer identification number, or certify that it is correct, or if the *IRS* instructs the Fund to do so.

Other Information. The Funds are required to withhold a 30% U.S. tax on dividend payments, and beginning on January 1, 2019, on redemption proceeds and certain capital gain dividends, made to certain non-U.S. entities, unless such entities comply with certain reporting requirements to the *IRS*, or with the reporting requirements of an applicable intergovernmental agreement, in respect of its direct and indirect U.S. investors.

For United Kingdom tax purposes, a Fund may apply for U.K. "reporting fund status," which, if approved by the U.K. tax authorities and implemented by a Fund, would require a Fund to report information that may allow certain U.K.-based investors certain tax benefits. Shareholders potentially subject to U.K. income tax should consult their own tax advisor.

Financial Highlights

The financial highlights tables are intended to help you understand each Fund's financial performance for each share class for each of the periods presented. Certain information reflects financial results for a single fund share. The *total returns* in the tables represent the rate that an investor would have earned (or lost) on an investment in a Fund (assuming reinvestment of all dividends and distributions). This information for each period presented has been audited by PricewaterhouseCoopers LLP, whose reports on the financial statements containing the financial highlights, are included in the representative Fund's annual report, which is available upon request.

PER SHARE OPERATING PERFORMANCE

	Change in Net Assets Resulting from Operations ¹				Less Dividends and Distributions		
	Net Asset Value, Beginning of Period	Net Investment Income (Loss)	Net Realized and Unrealized Gain (Loss)	Net Increase (Decrease) in Net Asset Value from Operations	Distributions from Net Investment Income	Distributions from Net Realized Gains	Total Distributions

* Annualized for periods less than one year.

1 Per share net investment income (loss) and net realized and unrealized gain (loss) are based on average shares outstanding.

2 Total investment return is calculated assuming an initial investment made at the net asset value at the beginning of the period, reinvestment of all dividends and distributions at net asset value during the period and redemption on the last day of the period and is not annualized.

3 Includes adjustments in accordance with accounting principles generally accepted in the United States of America and as such, the net asset value for financial reporting purposes and the returns based upon those net asset values may differ from the net asset value and returns for shareholder transactions.

4 Ratios do not include the impact of the expenses of the underlying funds in which the Fund invests.

5 Portfolio turnover is not annualized.

6 Effective April 1, 2015, Class L Shares were renamed Class I Shares.

7 Amount is less than \$.005 per share.

8 Commencement of operations.

9 For the period ended September 30, 2013 certain Funds received special dividends which materially impacted the Net Investment Income Per Share and Net Investment Income Ratio. These dividends are not expected to continue in the future. Had these special dividends not been received the Net Investment Income Per Share and Net Investment Income Ratio would have been as follows:

FUND	NET INVESTMENT INCOME PER SHARE	NET INVESTMENT INCOME RATIO
AQR Large Cap Multi — Style Fund—Class I	\$0.06	0.98%
AQR Large Cap Multi — Style Fund—Class N	0.04	0.61
AQR Small Cap Multi — Style Fund—Class I	0.03	0.38
AQR Small Cap Multi — Style Fund—Class N	0.01	0.10
AQR International Multi — Style Fund—Class I	0.13	2.08
AQR International Multi — Style Fund—Class N	0.15	2.48
AQR Large Cap Momentum Style Fund—Class I	0.11	0.80
AQR Large Cap Momentum Style Fund—Class N	0.08	0.56
AQR Small Cap Momentum Style Fund—Class I	0.07	0.52
AQR Small Cap Momentum Style Fund—Class N	0.01	0.10
AQR International Momentum Style Fund—Class I	0.21	1.97
AQR International Momentum Style Fund—Class N	0.23	2.16
AQR TM Large Cap Momentum Style Fund—Class I	0.09	0.92
AQR TM Large Cap Momentum Style Fund—Class N	0.07	0.63
AQR TM Small Cap Momentum Style Fund—Class I	0.04	0.37
AQR TM Small Cap Momentum Style Fund—Class N	0.01	0.14

10 Certain expenses incurred by the Fund were not annualized for the period.

11 Ratios are disproportionate between classes due to size of net assets and fixed expenses.

12 Commencement of offering of shares.

13 For the period ended September 30, 2015 certain Funds received special dividends which materially impacted the Net Investment Income Per Share and Net Investment Income Ratio. These dividends are not expected to continue in the future. Had these special dividends not been received the Net Investment Income Per Share and Net Investment Income Ratio would have been as follows:

FUND	NET INVESTMENT INCOME PER SHARE	NET INVESTMENT INCOME RATIO
AQR Small Cap Multi — Style Fund—Class I	\$0.10	0.76%
AQR Small Cap Multi — Style Fund—Class N	0.07	0.53
AQR International Multi — Style Fund—Class I	0.25	2.28
AQR International Multi — Style Fund—Class N	0.22	2.02
AQR Small Cap Momentum Style Fund—Class I	0.13	0.58
AQR Small Cap Momentum Style Fund—Class N	0.07	0.32
AQR TM Small Cap Momentum Style Fund—Class I	0.09	0.57
AQR TM Small Cap Momentum Style Fund—Class N	0.05	0.34
AQR Global Equity Fund—Class I	0.10	1.26
AQR Global Equity Fund—Class N	0.08	0.95

14 The amount shown for a share outstanding throughout the period is not indicative of the aggregate net realized and unrealized gain (loss) for that period because of the timing of sales and repurchases of the Fund shares in relation to fluctuating market value of the investments in the Fund.

15 For the period ended September 30, 2014 certain Funds received special dividends which materially impacted the Net Investment Income Per Share and Net Investment Income Ratio. These dividends are not expected to continue in the future. Had these special dividends not been received the Net Investment Income Per Share and Net Investment Income Ratio would have been as follows:

FUND	NET INVESTMENT INCOME PER SHARE	NET INVESTMENT INCOME RATIO
AQR Small Cap Multi — Style Fund—Class I	\$0.04	0.28%
AQR Small Cap Multi — Style Fund—Class N	(0.00)	0.02
AQR Small Cap Momentum Style Fund—Class I	(0.02)	(0.07)
AQR Small Cap Momentum Style Fund—Class N	(0.08)	(0.34)
AQR International Momentum Style Fund—Class I	0.25	1.57
AQR International Momentum Style Fund—Class N	0.20	1.26
AQR TM International Momentum Style Fund—Class I	0.22	1.63
AQR TM International Momentum Style Fund—Class N	0.16	1.16
AQR Emerging Defensive Style Fund—Class I	0.23	2.13
AQR Emerging Defensive Style Fund—Class N	0.16	1.51

FUND	NET INVESTMENT INCOME PER SHARE	NET INVESTMENT INCOME RATIO
AQR Global Equity Fund—Class I	0.14	1.50
AQR Global Equity Fund—Class N	0.11	1.16
AQR International Equity Fund—Class I	0.26	2.22
AQR International Equity Fund—Class N	0.23	1.92

16 For the period ended September 30, 2016 certain Funds received special dividends which materially impacted the Net Investment Income Per Share and Net Investment Income Ratio. These dividends are not expected to continue in the future. Had these special dividends not been received the Net Investment Income Per Share and Net Investment Income Ratio would have been as follows:

FUND	NET INVESTMENT INCOME PER SHARE	NET INVESTMENT INCOME RATIO
AQR TM Small Cap Multi — Style Fund—Class I	\$0.11	1.14%
AQR TM Small Cap Multi — Style Fund—Class N	0.09	0.92
AQR TM Large Cap Momentum Style Fund—Class I	0.21	1.27
AQR TM Large Cap Cap Momentum Style Fund—Class N	0.18	1.10

17 For the period ended December 31, 2012 certain Funds received special dividends which materially impacted the Net Investment Income Per Share and Net Investment Income Ratio. These dividends are not expected to continue in the future. Had these special dividends not been received the Net Investment Income Per Share and Net Investment Income Ratio would have been as follows:

FUND	NET INVESTMENT INCOME PER SHARE	NET INVESTMENT INCOME RATIO
AQR Large Cap Momentum Style Fund—Class I	\$0.24	1.57%
AQR Large Cap Momentum Style Fund—Class N	0.01	1.07
AQR Small Cap Momentum Style Fund—Class I	0.15	1.01
AQR Small Cap Momentum Style Fund—Class N	0.02	2.93
AQR TM Large Cap Momentum Style Fund—Class I	0.17	1.76
AQR TM Large Cap Momentum Style Fund—Class N	0.01	2.28
AQR TM Small Cap Momentum Style Fund—Class I	0.12	1.26
AQR TM Small Cap Momentum Style Fund—Class N	0.02	3.54
AQR Large Cap Defensive Style Fund—Class I	0.11	2.58
AQR Large Cap Defensive Style Fund—Class N	0.05	1.38

18 The ratio is not representative of what the ratio would be if the Fund class had operated for a longer period of time. Certain expenses incurred by the Fund were not annualized for the period.

19 Excludes impact of IRS closing agreement tax expense (Note 2).

20 Includes impact of IRS closing agreement reimbursement.

21 For the period ended September 30, 2017 certain Funds received special dividends which materially impacted the Net Investment Income Per Share and Net Investment Income Ratio. These dividends are not expected to continue in the future. Had these special dividends not been received the Net Investment Income Per Share and Net Investment Income Ratio would have been as follows:

FUND	NET INVESTMENT INCOME PER SHARE	NET INVESTMENT INCOME RATIO
AQR Small Cap Multi — Style Fund—Class I	\$0.10	0.63%
AQR Small Cap Multi — Style Fund—Class N	0.06	0.37
AQR Small Cap Momentum Style Fund—Class I	0.08	0.35
AQR Small Cap Momentum Style Fund—Class N	0.03	0.13
AQR International Defensive Style Fund—Class I	0.28	2.24
AQR International Defensive Style Fund—Class N	0.26	2.02

Glossary of Terms

The following is a glossary of terms used throughout this prospectus and their definitions. This glossary is set forth solely for reference purposes. The terms summarized or referenced in this glossary are qualified in their entirety by the prospectus itself.

1940 Act	the Investment Company Act of 1940, as amended
Adviser	AQR Capital Management, LLC
Advisory Agreement	the investment advisory contracts under which the <i>Adviser</i> serves as investment adviser to each Fund
Board or Board of Trustees	the Board of Trustees of the AQR Funds or any duly authorized committee thereof, as permitted by applicable law
Business Day	each day during which the <i>NYSE</i> is open for trading
Code	the Internal Revenue Code of 1986, as amended
Distributor	ALPS Distributors, Inc.
Global Equity Benchmark or MSCI World Index	the MSCI World Index is a free float-adjusted market capitalization index that is designed to measure the performance of equities in developed markets, including the United States and Canada
Good order	a purchase, exchange or redemption order is in “good order” when a Fund, its <i>Distributor</i> and/or its agent, receives all required information, including properly completed and signed documents
IRS	the Internal Revenue Service
MSCI EAFE Index or International Equity Benchmark	the MSCI EAFE Index is a free float-adjusted market capitalization index that is designed to measure the performance of equities in developed markets, excluding the United States and Canada
MSCI Emerging Markets Index	the MSCI Emerging Markets Index is a free float-adjusted market capitalization index that is designed to measure the performance of equities in emerging markets
MSCI World ex-USA Index	the MSCI World ex-USA Total Return Index with Net Dividends Unhedged in U.S. Dollars, a free float-adjusted market capitalization index that is designed to measure the performance of equities in developed markets, excluding the United States
Momentum	the <i>Adviser</i> considers a security to have positive momentum primarily if it has a return over the prior twelve months that ranks in the top third of its relevant universe at the time of purchase. In assessing positive momentum, the <i>Adviser</i> may also consider additional factors, such as the security’s return over the most recent month and other time periods. The criteria the <i>Adviser</i> uses for determining positive momentum may change from time to time
Mutual fund	an investment company registered under the <i>1940 Act</i> that pools the money of many investors and invests it in a variety of securities in an effort to achieve a specific objective over time
NAV	the net asset value of a particular Fund
NYSE	the New York Stock Exchange
Rule 12b-1 Plan	a plan pursuant to Rule 12b-1 under the <i>1940 Act</i> , which permits a fund to pay distribution and shareholder servicing expenses out of fund assets
Russell 1000[®] Index	the Russell 1000 [®] Index measures the performance of the large- and mid-cap segment of the U.S. equity universe. It is a subset of the Russell 3000 [®] Index and includes approximately 1,000 of the largest securities based on a combination of their market cap and current index membership. The Russell 1000 [®] represents approximately 92% of the U.S. market. Indexes are unmanaged and one cannot invest directly in an index
Russell 2000[®] Index	the Russell 2000 [®] Index measures the performance of the small-cap segment of the U.S. equity universe. The Russell 2000 [®] Index is a subset of the Russell 3000 [®] Index representing approximately 10% of the total market capitalization of that index. It includes approximately 2,000 of the smallest securities based on a combination of their market cap and current index membership. Indexes are unmanaged and one cannot invest directly in an index
SEC	U.S. Securities and Exchange Commission
Total return	the percentage change, over a specified time period, in a <i>mutual fund’s</i> NAV, assuming the reinvestment of all distributions of dividends and capital gains

Tracking error	a measure of how closely a portfolio follows the index to which it is benchmarked. It measures the standard deviation of the difference between the portfolio and index returns
Transfer Agent	ALPS Fund Services, Inc.
Trust	AQR Funds, a Delaware statutory trust
Volatility	a statistical measure of the dispersion of returns of a security or fund or index, as measured by the annualized standard deviation of its returns. Higher volatility generally indicates higher risk

You may wish to read the Statement of Additional Information for more information about the Funds. The Statement of Additional Information is incorporated by reference into this prospectus, which means that it is considered to be part of this prospectus.

You may obtain free copies of the Funds' Statement of Additional Information, request other information, and discuss your questions about the Funds by writing or calling:

AQR Funds
P.O. Box 2248
Denver, CO 80201-2248
(866) 290-2688

The requested documents will be sent within three *Business Days* of your request.

You may also obtain the Funds' Statement of Additional Information, along with other information, free of charge, by visiting the Funds' Web site at <https://funds.aqr.com>.

Text-only versions of all Fund documents can be viewed online or downloaded from the EDGAR Database on the SEC's internet web site at www.sec.gov. You may also review and copy those documents by visiting the SEC's Public Reference Room in Washington, DC. Information on the operation of the Public Reference Room may be obtained by calling the SEC at 202-551-8090. In addition, copies of the Fund documents may be obtained, after mailing the appropriate duplicating fee, by writing to the SEC's Public Reference Section, Washington, DC 20549-1520 or by e-mail request at publicinfo@sec.gov.

Additional information about each Fund's investments is available in the Fund's annual and semi-annual reports to shareholders. In the Fund's annual report, you will find a discussion of the market conditions and investment strategies that significantly affected the Fund's performance during its last fiscal year.

Privacy Notice for Individual Shareholders

The AQR Funds (the "Trust") is committed to protecting your privacy. We are providing you with this privacy notice to inform you of how we handle your personal information that we collect and may disclose to our affiliates, and in certain instances unaffiliated third parties as discussed below. If the Trust changes its information practices, we will provide you with notice of any material changes. This privacy policy supersedes any of our previous policies relating to the information you disclose to us.

Why this Privacy Policy Applies to You

You obtained a financial product or service from or through us for personal, family or household purposes when you opened a shareholder account with the Trust, and are therefore covered by this privacy policy. In the event that you hold shares of a series of the Trust through a financial intermediary, including, but not limited to, a broker-dealer, bank, or trust company, the privacy policy of your financial intermediary would govern how the financial intermediary handles and shares your non-public personal information.

What We do to Protect Your Personal Information

We protect personal information provided to us by our individual shareholders according to strict standards of security and confidentiality. We maintain physical, electronic and procedural safeguards that comply with federal standards to guard consumer information. We permit only authorized individuals, who are trained in the proper handling of individual shareholder information and need to access this information to do their job, to have access to this information.

Personal Information that We Collect and May Disclose

As part of providing you with the Trust's products and services, we may obtain nonpublic personal information about you from the following sources:

- Information we receive from you on subscription applications or other forms, such as your name, address, telephone number, Social Security number, occupation, assets and income;
- Information about your transactions with us, such as your account balances, payment history and investment and account activity; and
- Information from public records we may access in the ordinary course of business.
- We may disclose the above nonpublic personal information to our affiliates and we restrict access to those employees, officers and agents of the Trust and its affiliates who need to know that information in order to provide services to the Trust.

When We May Disclose Your Personal Information to Unaffiliated Third Parties

We will only share your personal information collected, as described above, with unaffiliated third parties:

- At your request;
- For everyday business purposes, such as to process transactions and to maintain and service accounts (unaffiliated third parties in this instance may include, but are not limited to, service providers such as the Trust's distributors, administrators, custodians, accountants, attorneys, broker-dealers and transfer agents, and other parties providing individual shareholder servicing, accounting and recordkeeping services);
- With companies that perform sales and marketing services on our behalf with whom we have agreements to protect the confidentiality of your information and to use the information only for the purposes for which we disclose the information to them;
- When permitted or required by law to disclose such information to appropriate authorities; or
- To comply with laws, rules and other applicable legal requirements, to comply with a legal investigation or to respond to judicial process or government regulatory authorities or other purposes as authorized by law.

We do not otherwise provide information about you to outside firms, organizations or individuals except to our attorneys, accountants and auditors and as permitted by law and regulation.

What We do with Personal Information about Our Former Customers

If you decide to discontinue doing business with us, the Trust will continue to adhere to this privacy policy with respect to the information we have in our possession about you and your account following the termination of our shareholder relationship.
