## Portfolio Statistics

Beta of Fund to DJ-UBS	1.04
Beta of Fund to S&P GSCI	0.61
Current Fund Target Volatility	14.21%
<b>Total Fund Assets (\$MM)</b>	<b>480</b>

\* Risk Allocation of each sector is an estimate of the volatility of that sector (taking into account correlations within the sector) using AQR proprietary risk models, divided by the sum of the volatilities of the sectors. Within a sector, each asset risk allocation is an estimate of the volatility of that asset, divided by the sum of the volatilities of the assets in that sector, and multiplied by the sector "Risk Allocation" calculated above.

\* Portfolio holdings are subject to change and should not be considered a recommendation to buy or sell securities.

## Fund Facts

	Ticker	CUSIP	Inception Date	Investment Minimum*	12b-1Fee	Gross Expense Ratio	Net Expense Ratio**
Class I Shares	ARCIX	00203H677	7/9/12	\$5 Million	None	1.07%	1.04%
Class N Shares	ARNX	00203H727	7/9/12	\$2500	0.25%	1.33%	1.29%
Class R6 Shares	QRCRX	00191K856	9/2/14	\$50 Million	None	0.99%	0.94%

\*Investment minimums are waived or reduced for certain investors. Some financial intermediaries may not offer Class R6 Shares or may impose different or additional eligibility and minimum investment requirements. See the Prospectus for additional details.

\*\*The Adviser has contractually agreed to reimburse operating expenses of the Fund at least through April 30, 2024.

## Adjusted Expense Ratio\*\*\*

Class I Shares: 1.03%

Class N Shares: 1.28%

Class R6 Shares: 0.93%

\*\*\*Reflects the Net Expense Ratio adjusted for certain investment related expenses, such as interest expense from borrowings and repurchase agreements and dividend expense from investments on short sales, incurred indirectly by the Fund through investments in underlying mutual funds, none of which are paid to the Adviser.

## About the Fund

**Investment Objective:**  
Seeks total return.

### Reasons to Invest:

#### Diversification Across Assets

The Fund aims to include more commodity markets and to be more diversified across commodity sectors than its benchmark Bloomberg Commodity TR Index, which is heavily concentrated in energies.

#### Risk-Managed Strategy

The Fund will adjust exposure to commodities through time based on research-driven portfolio construction and risk management processes.

#### Active View

The Fund uses AQR's proprietary investment signals to actively over- or under-weight commodities and sectors based on their attractiveness.

#### Potential Advantages:

##### Academic Research Foundation

Investment approach is grounded in academic research dating back several decades.

##### Experienced Management Team

AQR has been implementing commodity strategies since 1999.

##### Trading Infrastructure

Customized liquidity-providing algorithms seeking to minimize transaction costs.

##### Cutting Edge Research

Ongoing commitment to research and development.

Refinitiv Lipper Fund Awards United States 2023 Winner, Best Commodities General Fund Over Three and Five Years

Refinitiv Lipper Fund Awards United States 2022 Winner, Best Commodities General Fund Over Three Years.

The Refinitiv Lipper Fund Awards are based on the Lipper Leader for Consistent Return rating, which is a risk-adjusted performance measure calculated over 36, 60 and 120 months. Lipper Leaders fund ratings do not constitute and are not intended to constitute investment advice or an offer to sell or the solicitation of an offer to buy any security of any entity in any jurisdiction. For more information, see [lipperfundawards.com](http://lipperfundawards.com).

## Example of Underlying Strategies

The Fund invests in a portfolio of commodity futures contracts. The Fund seeks to balance risks across commodity sectors, managing risk over time through volatility targeting and drawdown control, and improving returns using information on commodity fundamentals and trends

### Risk Balancing Across Sectors

In a risk balanced commodities portfolio, every sector contributes roughly equally to the volatility of the total portfolio and no one commodity dominates near-term returns. To achieve this, less volatile sectors are given larger notional allocations, while volatile sectors get a smaller notional allocation.

### Risk Balancing Through Time

Over time, the volatility of commodities can vary significantly. During stress periods when the volatility across commodities increases sharply, such as 2008, the riskiness of a commodities portfolio may become higher than desirable. By monitoring volatilities and correlations across commodities, it is possible to increase or decrease portfolio-wide exposures in order to target a pre-specified risk level for the fund and attempt to keep returns smoother over time.

### Drawdown Control

We believe volatility targeting should be supplemented by a systematic, pre-set drawdown control policy, dictating how portfolio risk will be reduced during a prolonged crisis to help control the size of absolute drawdowns. As soon as markets stabilize, the drawdown policy seeks to ensure that the fund returns to being fully invested. We believe that this improves investors' odds of sticking with a long-term allocation.

### Active Management

The Fund is actively managed, and the fund managers will vary the Fund's positions in individual commodities and commodity sectors (even going short in some commodities at times) based on an evaluation of the attractiveness of the positions. These shifts in allocations will be determined using AQR's proprietary models. Information that is evaluated includes the roll yield, inventory, and supply and demand relationships of each commodity, as well as the macroeconomic environment and other factors.

### Definitions:

**Current Beta of Fund to Index:** A forward-looking measure of the amount the fund is expected to move given a move in the specified Index, based on AQR proprietary risk models. A beta of 1 indicates that if the index moves 10%, the fund is expected to move, on average, 10% over the same period. A beta of more than 1 indicates the fund is expected to move, on average, more than 10% in that case, and a beta of less than one indicates the fund is expected to move less than 10% in that case.

**Futures Contract:** An exchange-traded standardized contract to buy or sell a specified asset in the future for a price agreed today.

**Roll Yield:** The percentage difference in price between two futures contracts for different delivery dates. Represents the difference between spot price returns and the returns to holding futures.

**S&P GSCI Commodity Index:** a composite index of commodity sector returns representing an unleveraged, long only investment in commodity futures that is broadly diversified across the spectrum of commodities.

**Volatility:** A statistical measure of the variation in returns for a given security or index.

### PRINCIPAL RISKS:

*Foreign investing involves special risks such as currency fluctuations and political uncertainty. The use of derivatives, forward and futures contracts, and commodities exposes the Fund to additional risks including increased volatility, lack of liquidity, and possible losses greater than the Fund's initial investment as well as increased transaction costs. This fund enters into a short sale by selling a security it has borrowed. If the market price of a security increases after the Fund borrows the security, the Fund will suffer a potentially unlimited loss when it replaces the borrowed security at the higher price. Short sales also involve transaction and other costs that will reduce potential Fund gains and increase potential Fund losses. When investing in bonds, yield and share price will vary with changes in interest rates and market conditions. Investors should note that if interest rates rise significantly from current levels, bond total returns will decline and may even turn negative in the short term. There is also a chance that some of the fund's holdings may have their credit rating downgraded or may default. Actual or realized volatility can and will differ from the forecasted or target volatility described above.*

*Commodities and futures generally are volatile and involve a high degree of risk. The fund may trade more frequently and incur higher levels of brokerage fees and commissions, and cause higher levels of current tax liability to shareholders in the Fund. Prices of fixed income securities generally increase when interest rates decline and decrease when interest rates increase and may cause losses. The Adviser from time to time employs various hedging techniques, it is not possible to hedge fully or perfectly against any risk, and hedging entails its own costs.*

*This Fund is not suitable for all investors. An investor considering the Funds should be able to tolerate potentially wide price fluctuations. Risk allocation and attribution are based on estimated data, and may be subject to change.*

*There are risks involved with investing including the possible loss of principal. Past performance does not guarantee future results. Diversification does not eliminate the risk of experiencing investment losses. This document is intended exclusively for the use of the person to whom it has been delivered by AQR and it is not to be reproduced or redistributed to any other person without AQR's written consent.*

*The Bloomberg Commodity Index TR is a broadly diversified index that allows investors to track commodity futures through a single measure. Effective July 1, 2014, the Dow Jones-UBS Commodity Index was renamed the "Bloomberg Commodity Index Family."*

**Please refer to the prospectus or summary prospectus for complete information regarding all risks associated with the fund. An investor should consider the investment objectives, risks, charges and expenses of the fund carefully before investing. To obtain a prospectus or summary prospectus containing this and other information, please call 1-866-290-2688 or download the file from [www.aqrfunds.com](http://www.aqrfunds.com). Read the prospectus carefully before you invest. There is no assurance the stated objectives will be met.**
