## Share Classes

I	AQMIX
N	AQMNX
R6	AQMRX

## Investment Objective

Seeks positive absolute returns.

## Assets

\$1,545.3 M

## Management Team

Cliff Asness, Ph.D  
 John M. Liew, Ph.D  
 Jordan Brooks, Ph.D  
 Erik Stamelos  
 James Asselin  
 Fred Liu  
 James Lofton

## Key Benefits

### Comprehensive Trend Following

Unlike conventional approaches, the Fund combines insights from both price trends and economic trends when building positions.

### Strategy Breadth

The Fund trades a diverse portfolio of several hundred futures-related instruments across global asset classes, including in alternative markets.

### Opportunity to Perform in Up and Down Markets

By going long assets with favorable trends, and short assets with bearish trends, the Fund seeks to benefit from both up and down movements in prices.

## Fund Overview

The Fund invests long and short in liquid futures and other instruments across global equities, fixed income, currencies, and commodities markets. Positions are based on proprietary signals that aim to go long markets with positive trends and short markets with falling trends.

## Morningstar Rating

★★★★ Overall Morningstar Rating™ Systematic Trend (65 Funds)

As of 12/31/2024. Ratings are based on risk-adjusted total returns, are determined monthly and are subject to change. Past performances is not indicative of future results.

## Performance as of 12/31/2024 (%)

	Inception	QTD	ANNUALIZED TOTAL RETURNS					Since Inception	EXPENSE RATIO		
			1-Yr	3-Yr	5-Yr	10-Yr	Gross		Net*	Adjusted**

**Portfolio Statistics**

# Long Holdings	914
# Short Holdings	930
Realized Beta Since Inception to S&P 500	-0.14
Realized Since Inception Volatility	10.20 %
Realized Since Inception Sharpe Ratio	0.17

**Risk Allocation By Asset Class (%)**

Equities	28.36
Fixed Income	21.01
Currencies	27.15
Commodities	23.48

All Fund statistics are subject to change and should not be considered a recommendation to buy or sell securities.

Risk allocations are calculated by dividing estimated asset class volatility by the sum of all asset class volatilities. Volatility and Beta are calculated using three-day overlapping returns.

## About AQR

AQR is a global investment management firm dedicated to delivering results for our clients. At the nexus of economics, behavioral finance, data and technology, AQR's evolution over two decades has been a continuous exploration of what drives markets and how it can be applied to client portfolios. The firm is headquartered in Greenwich, Connecticut, with offices in Bangalore, Dubai, Munich, Hong Kong, London and Sydney.

## Disclosures

The **Morningstar Rating** for funds, or "star rating," is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods.

## Principal Risks:

An investment in the Fund is subject to risks, including the possibility that the value of the Fund's portfolio holdings may fluctuate in response to events specific to the companies in which the Fund invests, as well as economic, political or social events in the U.S. or abroad. Foreign investments often involve special risks not present in U.S. investments that can increase the chances that the Fund will lose money. Emerging markets are riskier than more developed markets because they tend to develop unevenly and may never fully develop. Emerging markets are more likely to experience hyperinflation and currency devaluations, which adversely affect returns to U.S. investors.

The use of derivatives, including swaps, forward and futures contracts, and investments in commodities exposes the Fund to additional risks including increased volatility, lack of liquidity, and possible losses greater than the Fund's initial investment as well as increased transaction costs. The Fund from time to time employs various hedging techniques. The success of the Fund's hedging strategy will be subject to the investment adviser's ability to correctly assess the degree of correlation between the performance of the instruments used in the hedging strategy and the performance of the investments in the portfolio being hedged. This Fund takes short positions in derivative instruments. A short position in a derivative instrument involves the risk of a theoretically unlimited increase in the value of the underlying instrument, which could cause the Fund to suffer a (potentially unlimited) loss. Short sales also involve transaction and other costs that will reduce potential Fund gains and increase potential Fund losses. The Fund is subject to high portfolio turnover risk as a result of frequent trading, and thus, will incur a higher level of brokerage fees and commissions, and cause a higher level of tax liability to shareholders in the Fund.

The Fund is not suitable for all investors. An investor considering the Fund should be able to tolerate potentially wide price fluctuations. There are risks involved with investing including the possible loss of principal. Past performance does not guarantee future results. Diversification does not eliminate the risk of experiencing investment losses. This document is intended exclusively for the use of the person to whom it has been delivered by AQR and it is not to be reproduced or redistributed to any other person without AQR's written consent.

## Definitions:

The ICE BofA U.S. 3-Month Treasury Bill Index tracks the performance of the U.S. dollar-denominated U.S. Treasury Bills issued in the domestic market with a remaining term to final maturity of less than 3 months.

Beta is a measure of how sensitive a Fund's return is to changes in a benchmark index. A beta of greater than 1 indicates a higher sensitivity to benchmark moves, and a beta less than 1 indicates lower sensitivity.

Sharpe Ratio is a measure of risk-adjusted performance of a security or investment.

Volatility is a statistical measure of the variation in returns for a given security or index.

**Please refer to the Prospectus or Summary Prospectus for additional information regarding risks associated with the Fund. An investor should consider the investment objectives, risks, charges and expenses of the Fund carefully before investing.
